

# BARRICK

PUEBLO VIEJO JV

If you have any questions or if you want to know more about the studies that we must carry out to extend the life of the mine, approach the representative of the Corporate Social Responsibility team who visits your location.

Corporate Social Responsibility Office  
809-331-7878, ext. 3315

We also invite you to follow us on our social networks:

## Commitment to the communities

Since entering the country in 2007, Barrick Pueblo Viejo's social management has grown hand in hand with neighboring communities, through the implementation of development programs, providing tangible benefits in the areas of:

- Education
- Production, self-employment, and microenterprises
- Community health and safety
- Improvement and diversification of local goods and services
- Improvement of community infrastructure
- Support to local governments in their municipal development plans
- Strengthening local institutions

If the feasibility studies to develop the expansion project that extends the life of the mine and obtain the necessary permits are favorable, at Barrick Pueblo Viejo we are clear about our commitment to the communities to enhance their development and improve their livelihoods.

COMMITMENT TO COMMUNITIES

- Payment of compensation for land, plantations, and improvements
- Relocation and construction of communities for people living in the area of interest
- Delivery of new land with certificate of title
- Local jobs and purchasing
- Development works and social investment
- Creation of development committees
- Productive projects to promote the development of cocoa

In the same way, we will continue working under our vision of sustainability, which leads us to incorporate the environment in all aspects of our business, making decisions in partnership with local authorities.

If the feasibility studies determine that the project is possible, our commitment to the environment would be based on the following:

Minimize water use and protect water quality from existing sources.

Treat and discharge water in compliance with environmental regulations.

Implement a revegetation project in the upper basin.

Launch participatory environmental monitoring.
