

NEWS RELEASE

ADI Brings Commercial AV Solutions to Life at InfoComm 2026

2026-06-17

Immersive displays demonstrate fully integrated audio, control, conferencing, networking and remote management solutions across multiple environments

At InfoComm 2026, ADI is showcasing solutions that support end-to-end commercial AV installations through a curated ecosystem of exclusive and distributed brands, including Access Networks, Araknis, AtlasIED, Harman, Logitech, NETGEAR, Q-SYS, Samsung, Shure, Sony, Ubiquiti, WattBox, Yealink, and more. The interactive zones span across multiple product categories including audio and distribution, conferencing and collaboration, control and automation, power and networking, remote management, services and surveillance and security to reflect a variety of commercial environments.

This year, the "ADI Gives You More" philosophy comes to life through a retail-inspired Pro AV environment that showcases how integrators can build complete, scalable solutions across audio, conferencing, control, networking, remote management, and more. Attendees will get a firsthand look at how ADI's portfolio of exclusive and distributed brands comes together to drive new business opportunities, streamline deployments, and end-user experiences.

Debuting is the "ADI Store Concept" where a section of the booth will transform into an immersive experience that gives visitors a firsthand look at how products are merchandised across **ADI stores nationwide**. In a nod to Las Vegas, attendees can earn "ADI Comfort Cash" by participating in product demos and meeting with team members, then redeem it within the store for comfort-focused giveaways including cooling fans, eye patches, foot relief items, massage balls, and more to help attendees stay refreshed and energized throughout the show.

Designed to reflect how integrators specify, install and support complete systems, ADI's booth features dedicated

solution areas where attendees can interact with fully integrated technologies and engage directly with ADI experts. Demonstrations highlight applications across meeting spaces, retail, hospitality, restaurants and bars, showcasing how integrated solutions come together to deliver seamless, real-world performance.

“By organizing the booth into dedicated commercial spaces, we’re giving integrators a clear view of how to design, deploy and manage complete systems more efficiently while opening new opportunities for recurring service and long-term value.” Cynthia Menna, VP and General Manager AV at ADI shared. “InfoComm gives us an opportunity to showcase how ADI Gives You More - providing more products, more services, more shopping convenience, more local expertise, and more investment in innovation.”

Audio & Distribution

Advanced audio and media distribution technologies anchored by the Binary 900 Series Media over IP platform and Episode Business Music Solution (EBMS) demonstrate scalable AV-over-IP distribution, DSP-driven audio processing and flexible amplification designed for multi-zone commercial environments. With MoIP-enabled DSPs, streaming amplifiers and a range of PoE-powered endpoints, attendees can explore how high-quality audio and video can be efficiently delivered, managed and customized across diverse applications. Additional brands include Shure, AtlasIED, LEA, and Harman, displaying amplifiers, speakers, controllers, processors, microphones, and loudspeakers.

Conferencing & Collaboration

Attendees can explore integrated conferencing solutions featuring leading brands including Q-SYS, Yealink, Logitech, Inogeni, and Humly, delivering seamless meeting experiences across platforms with high-quality audio, video, and intuitive control.

Control & Automation

Control4 solutions spotlight centralized control across AV, lighting, and connected systems, led by the new T5 In-Wall Touchscreen and Control4 X4 interface. The booth also features Control4 controllers, Halo remotes and Lux lighting solutions, demonstrating scalable automation and streamlined system management for commercial and hybrid environments.

Power & Networking

ADI is highlighting infrastructure solutions designed to ensure system reliability, simplify deployment, and enable remote service at scale across high-performance commercial AV environments. Featured solutions include Netgear, Ubiquity, Access Networks and Araknis networking products, alongside WattBox IP-enabled power distribution units,

UPS systems and power accessories with OvrC remote management capabilities.

Remote Management & Web Services

ADI is spotlighting its OvrC remote management and service platforms that enable integrators to configure, monitor, manage, and troubleshoot systems efficiently and remotely, reducing service calls and improving long-term performance.

Surveillance & Security

Luma is demonstrating intelligent surveillance capabilities designed for commercial applications, featuring high-resolution IP cameras including fisheye, dome, and floodlight models with active deterrence, alongside hybrid 4K cameras with motorized varifocal lenses. The lineup also includes NVR systems and Luma Bridge connectivity, demonstrating a complete surveillance ecosystem with simplified deployment, flexible installation, and streamlined system management.

Daily Happy Hours

ADI will host in-booth Happy Hour events on Wednesday, June 17, and Thursday, June 18 from 3:00 PM to 5:00 PM with giveaways and raffle prizes.
