ADI Launches Over 120 New Triad Products, Giving Integrators More Options for Premium, Customizable Sound Solutions

2026-03-05

New amplification, home cinema speakers, and subwoofers will empower integrators to meet growing demand for high-performance, design-integrated audio.

Reaffirming its commitment to innovate across all major product categories, ADI, a leading distributor and solution provider of security, AV, and smart living products, introduced more than 120 new Triad amplification, home cinema speaker and subwoofer solutions in 2025. One of the brands' most significant portfolio updates, this launch gives integrators expanded access to premium, customizable audio solutions meeting the rising demand for high-performance, design-integrated sound.

Building on Triad's legacy of craftsmanship and acoustic precision, the new lineup elevates its core strengths with models that are designed and engineered in Portland, Oregon. Each model is built to order and fully customizable, with scalable designs that deliver consistent high-performance sound in any space. Backed by Portland-based design services and handcrafted-in-the-USA manufacturing, integrators receive dedicated support to ensure projects are expertly planned and to create custom-built products for even the most challenging installation needs.

"These product launches represent a major milestone for Triad and ADI's audio portfolio," said Alex Zaliauskas, Director, Product Management Speakers at ADI. "With this lineup, we're empowering integrators with one of the industry's most extensive selections of premium, customizable speakers and amplifiers. Proudly designed and made in the USA, Triad delivers the craftsmanship and performance integrators and homeowners expect, making it easier than ever to create immersive, high-performance sound experiences."

Amplification

In the amplification category, the Triad Subwoofer RackAmp family introduced new 300W, 700W, 1200W, and 2400W models. Delivering between 300W and 2,400W of clean, reliable power at 4 Ohms, the Triad Subwoofer RackAmp line supports a wide range of Triad subwoofers for both dedicated listening and cinema applications.

Triad's digital subwoofer amplifiers deliver 300W to 2,400W of clean, consistent power and are compatible with both Triad and third-party subwoofers. Select models (700W, 1200W, 2400W) feature advanced DSP for enhanced customization and are available in single-channel mono or 2-channel configurations. The sleek 1U chassis design ensures effortless integration into any rack system.

The 300W model includes three custom EQ settings to optimize performance for specific Triad subwoofers, RCA line-level connections for daisy-chaining additional amps, and multiple turn-on modes including 12V trigger input/output for flexible installations. Like the higher-wattage models, it's engineered to sustain full power for extended periods, ensuring every note is delivered with precision and clarity in even the most demanding media.

Home Cinema

Today's home cinema projects require flexible installation, clean aesthetics, and performance that rivals commercial theaters. Triad's speaker solutions are designed to deliver immersive, room-filling audio while integrating seamlessly into the space and simplifying the installation process for integrators.

Triad's InWall / InCeiling LCRs and Satellite Speakers bring high-performance sound and safer, simplified installation to any project with the patent-pending spring dog installation feature. With extended bass response, these speakers are ideal for multiroom audio, home theaters, media rooms, and surround sound systems. Custom color grilles are included in the price of the product.

Triad OnWall and InWall Surrounds are core to the updated Triad product line and can easily switch between bi-pole and mono-pole operation, tailoring performance to the room's layout and acoustics. OnWall Surrounds feature gravity-locking cleat mounts to provide secure, clean, and adjustable wall installation, ideal for heavier speakers. While InWall Surrounds feature ADI's patent-pending spring dog system, which holds the speaker securely in place, frees installers' hands, and can rotate 90° to avoid studs or joists, making installation fast, flexible, and safe.

Triad's new InRoom LCR and InRoom Center speakers modernize the lineup while reinforcing Triad's position as premium, high-performance audio. Featuring custom-engineered aluminum cone woofers and tweeters, upgraded crossover components, and solid MDF cabinets with internal bracing, each model is precision-built to deliver crystal-

clear detail, fast transient response, and distortion-free sound. InRoom Models are available in six predefined colorways, custom options and a new High Gloss black Finish.

Subwoofers

Triad's Cinema Subwoofers are designed for home integration professionals seeking powerful, precise bass in high-end theater experiences. Featuring front wiring, secure mounts, built-in handles, and rubber isolation bumpers to minimize vibration, these subwoofers deliver clear, impactful sound without disturbing the rest of the home. High-current binding posts ensure reliable performance even in demanding, high-output applications.

Triad's Slim Subwoofers, including InRoom, OnWall, and InWall models, deliver deep, controlled bass while saving space, making them ideal for enhancing movies and music in any environment. Constructed with aluminum cones for reduced distortion and engineered to pair with Triad Subwoofer RackAmps for optimal performance, these subwoofers provide flexible, high-quality low-frequency solutions that can be customized with custom colored Grilles for InWall models and six predefined colorways or custom options for InRoom and OnWall models – all included in the price.

The high-performance Triad Powered InRoom Dual Subwoofers deliver full power output for over a minute and feature upgraded drivers and amplification for deeper, more precise bass. Engineered for both exceptional performance and seamless integration, they combine power and flexibility in a refined design. Enhanced installation makes them ideal for home automation environments, while a built-in advanced DSP platform provides granular control through Parametric EQ, crossover, phase, delay, and power settings. With a pre-installed EQ preset to optimize performance right out of the box, Triad ensures every entertainment space sounds and feels as impressive as it looks. These subwoofers come in six predefined colorways and a high-gloss black finish.

All new products are currently available internationally to Triad Authorized Dealers through online portals and store locations. Integrators interested in becoming a Triad Authorized Dealer can learn more and apply at adiglobaldistribution.us/catalog/featured-brands/triad.
