ⁱ For a detailed description of each of the non-GAAP financial measures used in this Annual Report and a detailed reconciliation to the most directly comparable measure under IFRS, please refer to pages 57 to 69 of the MD&A accompanying Barrick's Q4 and year-end 2025 financial statements filed on SEDAR+ at www.sedarplus.ca and on EDGAR at www.sec.gov.

ⁱⁱⁱ On an attributable basis

^{iv} Cash, net of debt

ⁱⁱ Estimated in accordance with National Instrument 43-101 – *Standards of Disclosure in Mineral Projects* as required by Canadian securities regulatory authorities. As of December 31, 2024, Fourmile indicated resources of 3.6 million tonnes grading 11.76g/t representing 1.4 million ounces of gold and inferred resources of 14 million tonnes grading 14.1 g/t representing 6.4 million ounces of gold. As of December 31, 2025, Fourmile indicated resources of 4.6 million tonnes grading 17.59 g/t representing 2.6 million ounces of gold and inferred resources of 25 million tonnes grading 16.9 g/t representing 13 million ounces of gold. Complete mineral reserve and mineral resource data for all mines and projects referenced in this annual report, including tonnes, grades, and ounces, can be found on pages 75-84 of the MD&A accompanying Barrick's Q4 and year-end 2025 financial statements filed on SEDAR+ at www.sedarplus.ca and on EDGAR at www.sec.gov.

MESSAGE FROM THE PRESIDENT AND CEO

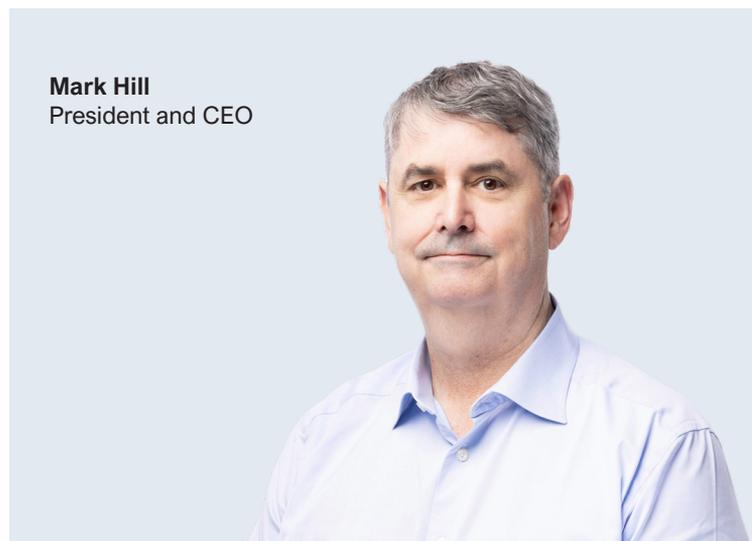

Safety without compromise. Performance without excuses. Growth without limits. These are the standards we hold ourselves to as we create sustainable value for our shareholders.

Dear fellow shareholders,

In 2025, as Barrick met production guidance for gold and copper, we achieved several financial milestones. We produced record annual operating cash flow of \$7.7 billion and free cash flowⁱ of \$3.9 billion. Annual net earnings of \$5.0 billion, net earnings per share of \$2.93, adjusted net earningsⁱ of \$4.1 billion, and adjusted earnings per shareⁱ of \$2.42 were all records. We returned a record \$2.4 billion to shareholders, including \$0.9 billion in dividends and \$1.5 billion in share buybacks. We sold four assets—the Hemlo and Tongon mines and the Donlin and Alturas projects—for total cash proceeds of \$2.6 billion. Our year-end cash balance of \$6.7 billion was an all-time high, and we now have a net cash^{iv} position of \$2 billion. We doubled Fourmile’s resource, confirming it as one of the most significant gold discoveries this century.ⁱⁱ We resolved the disputes in Mali and regained control of the Loulo-Gounkoto mine.

The only way we can truly create value is through long-term partnership with our host countries and communities, our fellow owners, and our people. We work tirelessly to build and maintain trust with all our partners, which among other things means negotiating deals that our host countries consider good and fair. It also means ensuring the safety of our people, contributing to the health and education of our host communities, and being responsible stewards of natural ecosystems.

Mark Hill
President and CEO

It was with these goals in mind that we conducted an operational review of our entire business in Q4. We moved to a smaller, nimbler Group executive team and added operational experience to our senior leadership. We put Pueblo Viejo in our North American region and placed our key autoclave processing facilities under common leadership to share best practices. We moved Tim Cribb from oversight of Reko Diq to Chief Operating Officer for North America. Most importantly, we put operational ownership back in the hands of the operators. They delivered a 5% increase in gold production over Q3 and reviewed mine plans from the bottom up, which gives us confidence in our 2026 guidance. Nevada has already seen one of the best starts to the

year since we began the NGM joint venture, and we expect further production growth. Our Board's Compensation Committee has also tied executive compensation far more heavily to company-wide performance based on quantifiable measures of ESG, production, and cost.

In December, the Board authorized our management team to explore an IPO of an entity, IPOCo, that will hold Barrick's premier North American gold assets: our joint venture interests in Nevada Gold Mines and Pueblo Viejo, and our wholly owned Fourmile discovery. Our leadership and advisors conducted a rigorous financial and operational analysis, from which the Board concluded that the IPO represents the best path for maximizing value for our shareholders. The Board has authorized management to begin preparations for the IPO and expects it to be

completed by late 2026. Barrick intends to retain a significant controlling interest in IPOCo following the IPO and continue to benefit financially through its majority ownership. We will continue to own and drive value in the Company's other world-class gold and copper assets.

Even as we change our structure, we will not waver in our discipline. We will continue to improve our performance and to allocate capital with an uncompromising eye on long-term value per share.

Working on your behalf is a privilege, and we will never flag in our efforts to keep earning and building your trust.

MANAGEMENT’S DISCUSSION AND ANALYSIS (“MD&A”)

Management’s Discussion and Analysis (“MD&A”) is intended to help the reader understand Barrick Mining Corporation (formerly Barrick Gold Corporation) (“Barrick”, “we”, “our”, the “Company” or the “Group”), our operations, financial performance and the present and future business environment. This MD&A, which has been prepared as of February 4, 2026, should be read in conjunction with our audited consolidated financial statements (“Financial Statements”) for the year ended December 31, 2025. Unless otherwise indicated, all amounts are presented in U.S. dollars.

For the purposes of preparing our MD&A, we consider the materiality of information. Information is considered material if: (i) such information results in, or would reasonably be expected to result in, a significant change in the market price or value of our shares; (ii) there

is a substantial likelihood that a reasonable investor would consider it important in making an investment decision; or (iii) it would significantly alter the total mix of information available to investors. We evaluate materiality with reference to all relevant circumstances, including potential market sensitivity.

Continuous disclosure materials, including our most recent Form 40-F/Annual Information Form, annual MD&A, audited consolidated financial statements, and Notice of Annual Meeting of Shareholders and Proxy Circular will be available on our website at www.barrick.com, on SEDAR+ at www.sedarplus.ca and on EDGAR at www.sec.gov. For an explanation of terminology unique to the mining industry, readers should refer to the glossary on page 72.

CAUTIONARY STATEMENT ON FORWARD-LOOKING INFORMATION

Certain information contained or incorporated by reference in this MD&A, including any information as to our strategy, projects, plans or future financial or operating performance, constitutes “forward-looking statements”. All statements, other than statements of historical fact, are forward-looking statements. The words “believe”, “expect”, “anticipate”, “aim”, “strategy”, “ramp up”, “target”, “plan”, “opportunities”, “guidance”, “forecast”, “outlook”, “project”, “develop”, “progress”, “continue”, “temporary”, “committed”, “estimate”, “potential”, “prospective”, “future”, “focus”, “ongoing”, “following”, “subject to”, “scheduled”, “may”, “will”, “can”, “could”, “would”, “should” and similar expressions identify forward-looking statements. In particular, this MD&A contains forward-looking statements including, without limitation, with respect to: Barrick’s forward-looking production and cost guidance, including our three-year gold and copper production outlook; anticipated production growth from Barrick’s organic project pipeline and reserve replacement; estimates of future cost of sales per ounce for gold and per pound for copper, total cash costs per ounce and C1 cash costs per pound, and all-in sustaining costs per ounce/pound; cash flow forecasts; projected capital, operating and exploration expenditures; the share buyback program and performance dividend policy; mine life and production rates; contingent consideration from the sale of the Hemlo gold mine and the Tongon gold mine; anticipated timing for development of the Goldrush Project; our plans, timelines, and expected completion and benefits of our growth projects, including the Goldrush Project, Fourmile, Ren, Pueblo Viejo plant expansion and mine life extension project, Veladero Phase 8 Leach Pad, Reko Diq, solar power project at Kibali, and the Lumwana Super Pit Expansion; anticipated production at Goldrush, Ren, Reko Diq and Lumwana; the doubling of mineral resources at Fourmile; capital expenditures related to upgrades and ongoing management initiatives; Barrick’s global exploration strategy and planned exploration activities; Barrick’s strategic copper business; our pipeline of high confidence projects at or near existing operations; the resumption of operations at Loulo-Goukoto following the resolution of disputes with the Government of Mali, including adoption of the 2023 Mining Code; the incorporation of Fourmile into the NGM joint venture at fair market value; potential mineralization and metal or mineral recoveries; Barrick’s intention to explore and potential benefits and expected timing of an initial public offering of its North American gold assets; our ability to convert resources into reserves and future reserve replacement; asset sales, joint ventures and partnerships; Barrick’s strategy, plans, targets and goals in respect of sustainability issues, including climate change, greenhouse gas (“GHG”) emissions reduction targets, human rights, safety performance, community development and resettlement, and responsible water use; and expectations regarding future price assumptions, financial performance and other outlook or guidance.

Forward-looking statements are necessarily based upon a number of estimates and assumptions including material estimates and assumptions related to the factors set forth below that, while considered reasonable by the Company as at the date of this MD&A in light of management’s experience and perception of current conditions and expected developments, are inherently subject to significant business, economic and competitive uncertainties and contingencies. Known and unknown factors could cause actual results to differ materially from those projected in the forward-looking statements and undue reliance should not be placed on such statements and information. Such factors include, but are not limited to: fluctuations in the spot and forward price of gold, copper or certain other commodities (such as silver, diesel fuel, natural gas and electricity); risks associated with projects in the early stages of evaluation and for which additional engineering and other analysis is required; risks related to the possibility that future exploration results will not be consistent with the Company’s expectations, that quantities or grades of reserves will be diminished, and that resources may not be converted to reserves; risks associated with the fact that certain of the initiatives described in this MD&A are still in the early stages and may not materialize; changes in mineral production performance, exploitation and exploration successes; risks that exploration data may be incomplete and considerable additional work may be required to complete further evaluation, including but not limited

to drilling, engineering and socioeconomic studies and investment; the speculative nature of mineral exploration and development; lack of certainty with respect to foreign legal systems, corruption and other factors that are inconsistent with the rule of law; changes in national and local government legislation, taxation, controls or regulations and/or changes in the administration of laws, policies and practices, including the expropriation or nationalization of property and political or economic developments in Canada, the United States or other countries in which Barrick does or may carry on business in the future; risks relating to political instability in certain of the jurisdictions in which Barrick operates; timing of receipt of, or failure to comply with, necessary permits and approvals; non-renewal of key licenses by governmental authorities; failure to comply with environmental and health and safety laws and regulations; increased costs and physical and transition risks related to climate change, including extreme weather events, resource shortages, emerging policies and increased regulations related to GHG emission levels, energy efficiency and reporting of risks; the Company’s ability to achieve its sustainability goals, including its climate-related goals and GHG emissions reduction targets, in particular its ability to achieve its Scope 3 emissions targets which require reliance on entities within Barrick’s value chain, but outside of the Company’s direct control, to achieve such targets within the specified time frames; contests over title to properties, particularly title to undeveloped properties, or over access to water, power and other required infrastructure; the liability associated with risks and hazards in the mining industry, and the ability to maintain insurance to cover such losses; damage to the Company’s reputation due to the actual or perceived occurrence of any number of events, including negative publicity with respect to the Company’s handling of environmental matters or dealings with community groups, whether true or not; risks related to operations near communities that may regard Barrick’s operations as being detrimental to them; litigation and legal and administrative proceedings; operating or technical difficulties in connection with mining or development activities, including geotechnical challenges, tailings dam and storage facilities failures, and disruptions in the maintenance or provision of required infrastructure and information technology systems; increased costs, delays, suspensions and technical challenges associated with the construction of capital projects; risks associated with working with partners in jointly controlled assets; risks related to disruption of supply routes which may cause delays in construction and mining activities, including disruptions in the supply of key mining inputs due to the invasion of Ukraine by Russia and conflicts in the Middle East; risk of loss due to acts of war, terrorism, sabotage and civil disturbances; risks associated with artisanal and illegal mining; risks associated with Barrick’s infrastructure, information technology systems and the implementation of Barrick’s technological initiatives, including risks related to cybersecurity incidents, including those caused by computer viruses, malware, ransomware and other cyberattacks, or similar information technology system failures, delays and/or disruptions; the impact of global liquidity and credit availability on the timing of cash flows and the values of assets and liabilities based on projected future cash flows; the impact of inflation, including global inflationary pressures driven by ongoing global supply chain disruptions, global energy cost increases following the invasion of Ukraine by Russia and country-specific political, economic factors in Argentina and uncertainty related to Venezuela; adverse changes in our credit ratings; fluctuations in the currency markets; changes in U.S. dollar interest rates; changes in U.S. trade, tariff and other controls on imports and exports, tax, immigration or other policies that may impact relations with foreign countries, result in retaliatory policies, lead to increased costs for raw materials and components, or impact Barrick’s existing operations and material growth projects; risks arising from holding derivative instruments (such as credit risk, market liquidity risk and mark-to-market risk); risks related to the demands placed on the Company’s management, the ability of management to implement its business strategy and enhanced political risk in certain jurisdictions; uncertainty whether some or all of Barrick’s targeted investments and projects will meet the Company’s capital allocation objectives and internal hurdle rate; whether benefits expected from recent transactions are realized; business opportunities that may be presented to, or pursued by, the Company; our ability to successfully integrate acquisitions or complete divestitures; risks related to competition in the mining industry; employee relations including loss

of key employees; availability and increased costs associated with mining inputs and labor; risks associated with diseases, epidemics and pandemics; risks related to the failure of internal controls; and risks related to the impairment of the Company's goodwill and assets. In addition, there are risks and hazards associated with the business of mineral exploration, development and mining, including environmental hazards, industrial accidents, unusual or unexpected formations, pressures, cave-ins, flooding and gold bullion, copper cathode or gold or copper concentrate losses (and the risk of inadequate insurance, or inability to obtain insurance, to cover these risks).

Many of these uncertainties and contingencies can affect our actual results and could cause actual results to differ materially from those expressed or implied in any forward-looking statements made by, or on behalf of, us. Readers are cautioned that forward-looking statements are not guarantees of future performance. All of the forward-looking statements made in this MD&A are qualified by these cautionary statements. Specific reference is made to the most recent Form 40-F/ Annual Information Form on file with the SEC and Canadian provincial securities regulatory authorities for a more detailed discussion of some of the factors underlying forward-looking statements and the risks that may affect Barrick's ability to achieve the expectations set forth in the forward-looking statements contained in this MD&A. We disclaim any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except as required by applicable law.

USE OF NON-GAAP FINANCIAL MEASURES

We use the following non-GAAP financial measures and ratios in our MD&A:

- "adjusted net earnings"
- "free cash flow"
- "attributable free cash flow"
- "EBITDA"
- "adjusted EBITDA"
- "attributable EBITDA"
- "attributable EBITDA margin"
- "net leverage"
- "minesite sustaining capital expenditures"
- "project capital expenditures"
- "TCC/oz"
- "C1 cash costs/lb"
- "AISC per oz/lb" and
- "realized price per oz/lb"

For a detailed description of each of the non-GAAP financial measures used in this MD&A and a detailed reconciliation to the most directly comparable measure under IFRS, please refer to the Non-GAAP Financial Measures section of this MD&A on pages 54 to 67. Each non-GAAP financial measure has been annotated with a reference to an endnote on page 68. The non-GAAP financial measures set out in this MD&A are intended to provide additional information to investors and do not have any standardized meaning under IFRS, and therefore may not be comparable to other issuers, and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS.

OVERVIEW

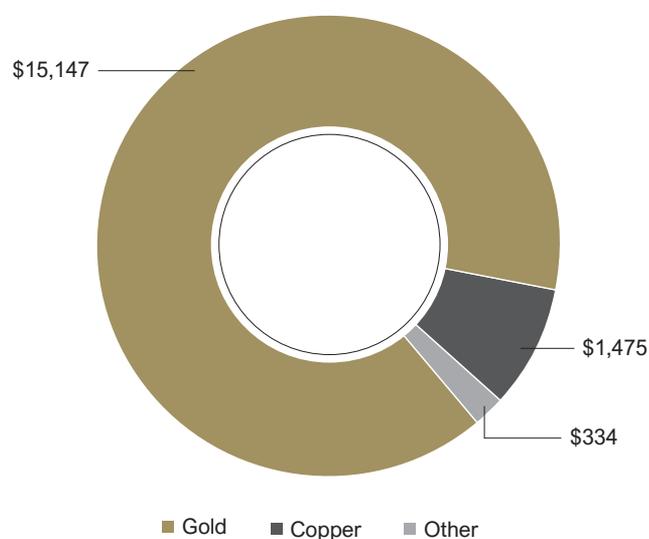

Our Vision

We strive to be the world's most valued gold and copper company by owning the best assets, managed by the best people, to deliver the best returns and benefits for all our stakeholders.

Our Business

Barrick is a sector-leading gold and copper producer with annual gold production and gold reserves that are among the highest in the industry. We are principally engaged in the responsible production and sale of gold and copper, as well as related activities such as exploration and mine development. We hold ownership interests in eleven producing gold mines and three producing copper mines. These include five Tier One Gold Assets¹, two Tier One Copper Assets/Projects³ and a diversified exploration portfolio positioned for growth in many of the world's most prolific gold districts. Over 50% of our gold production comes from North America. Our eleven producing gold mines are geographically diversified spanning the United States, the Dominican Republic, Tanzania, the Democratic Republic of the Congo, Mali, Argentina and Papua New Guinea. Our three producing copper mines are located in Zambia, Chile and Saudi Arabia, with a greenfield project in Pakistan. Our exploration and other development projects are located throughout the world, including the Americas, Asia and Africa. We sell our production globally through the following distribution channels: gold bullion is sold in the gold spot market or to independent refineries; gold and copper concentrate is sold to independent smelting or trading companies; and copper cathode is sold to third-party purchasers or on an exchange. Barrick shares trade on the New York Stock Exchange under the symbol B (formerly GOLD) and the Toronto Stock Exchange under the symbol ABX.

2025 REVENUE (\$ millions)

Our Strategy

We apply a business ownership model to our operations, attracting and developing world-class people who understand and are involved in the value chain of the business, act with integrity and are tireless in their pursuit of excellence and safety. We seek to deliver for all our stakeholders by optimizing free cash flow and managing risk to create long-term value for our shareholders while partnering with host governments and local communities to transform their country's natural resources into sustainable benefits with mutual prosperity. We aim to achieve this through the following:

Asset Quality

- Grow and invest in a portfolio of Tier One Gold Assets¹, Tier Two Gold Assets², Tier One Copper Assets/Projects³ and Strategic Assets⁴ with an emphasis on organic growth, leveraging our footprint in world-class geological districts. We focus our efforts on identifying and developing assets that meet our investment criteria. Our required return on Tier One^{1,3} capital investments is 15%, adjusting to 10% return on long-life (20+ year) investments with exposure to multiple commodity cycles. Our required return on investment for Tier Two Gold Assets² is 20%.
- Invest in exploration across extensive land positions in many of the world's most prolific gold and copper districts.
- Maximize the long-term value of our strategic Copper Business⁵.
- Sell non-core assets over time in a disciplined manner.

Operational Excellence

- Strive for zero harm workplaces.
- Operate a decentralized management structure with a strong ownership culture.
- Streamline management and operations, and hold management accountable for the businesses they manage.
- Leverage innovation and technology to drive industry-leading efficiencies.
- Build trust-based partnerships with our host governments, business partners, and local communities to drive shared long-term value.

Sustainable Profitability

- Follow a disciplined approach to growth and proactively manage our impacts on the wider environment, emphasizing long-term value for all stakeholders.
- Focus on increasing returns to shareholders, driven by return on capital, internal rate of return and free cash flow⁶ generation.

CAPITAL EXPENDITURES^{c,d} (\$ millions)

OPERATING CASH FLOW AND FREE CASH FLOW^e

RETURNS TO SHAREHOLDERS^e (\$ millions)

a. On an attributable basis.

b. Gold COS/oz is calculated as cost of sales across our gold operations (excluding sites in closure or care and maintenance) divided by ounces sold (both on an attributable basis using Barrick's ownership share). Copper COS/lb is calculated as cost of sales across our copper operations divided by pounds sold (both on an attributable basis using Barrick's ownership share).

c. Further information on these non-GAAP financial measures, including detailed reconciliations, is included on pages 54 to 67 of this MD&A.

d. Capital expenditures also includes capitalized interest.

e. Dividends declared are inclusive of the performance dividend.

Factors affecting net earnings and adjusted net earnings⁶ – Q4 2025 versus Q3 2025

Net earnings for Q4 2025 were \$2,406 million compared to \$1,302 million in Q3 2025. The increase was primarily due to the following items:

- acquisition/disposition gains of \$1,146 million, mainly relating to the sale of our Hemlo gold mine, our interest in the Tongon gold mine and the Alturas project, combined with the accounting impact of regaining control of the Loulo-Goukoto complex on December 16, 2025; partially offset by
- other expense adjustments of \$559 million in Q4 2025 which mainly related to the settlement payment to the Government of Mali in November 2025 and the fair value increment on inventory resulting from the purchase price allocation when we regained control of Loulo-Goukoto.

After adjusting for items that are not indicative of future operating earnings, adjusted net earnings⁶ of \$1,754 million for Q4 2025 was \$772 million higher than Q3 2025 mainly due to the higher realized gold price⁶, and higher gold sales volumes. These impacts were partially offset by an increase in gold COS/oz⁷. The Q4 2025 realized gold price⁶ was 21% higher when compared to Q3 2025. The increase in gold sales volumes was primarily due to a stronger performance at NGM, mainly at Carlin due to higher throughput and grades processed at both the roasters and the autoclave; and at Turquoise Ridge due to higher grades from the undergrounds; combined with the sale of the reacquired gold and restart of production at Loulo-Goukoto after regaining control of the mine. These impacts were partially offset by lower production at Tongon and Hemlo as a result of the divestitures in Q4 2025. The increase in gold COS/oz⁷ was primarily a result of the impact of the fair value increment on inventory resulting from the purchase price allocation when we regained control of Loulo-Goukoto, combined with higher royalties due to an increase in the realized gold price⁶ (impact approximately \$45/oz). This was combined with increased sulfuric acid consumption and prices at Carlin.

Refer to page 54 for a full list of reconciling items between net earnings and adjusted net earnings⁶ for the current and previous periods.

Factors affecting net earnings and adjusted net earnings⁶ – 2025 versus 2024

Net earnings for the year ended December 31, 2025 were \$4,993 million compared to \$2,144 million in 2024. The primary drivers of the increase were higher realized gold and copper prices⁶, and lower copper COS/oz⁷. These impacts were partially offset by lower gold sales volumes and an increase in gold COS/oz⁷.

After adjusting for items that are not indicative of future operating earnings, adjusted net earnings⁶ of \$4,139 million for the year ended December 31, 2025 was \$1,926 million higher than 2024. This result for 2025 was the highest adjusted net earnings⁶ since 2011. 2025 realized gold and copper prices⁶ were 46% and 14% higher, respectively when compared to 2024. Copper COS/oz⁷ was lower primarily due to higher grades processed and higher capitalized waste stripping at Lumwana. Gold sales volumes were lower largely driven by the temporary suspension of operations at Loulo-Goukoto on January 14, 2025. Control was subsequently regained on December 15, 2025. In addition to this, lower underground grades were mined at Carlin although this was partially offset by Cortez with more of the higher grade Cortez refractory ore being processed at the Carlin roasters. A further driver of the decrease was the divestitures of Tongon and Hemlo in Q4 2025. These unfavorable impacts were offset by increased production at Turquoise Ridge due to higher underground tonnes mined and higher tonnes processed. The increase in gold COS/oz⁷ was primarily due to the fair value increment on inventory resulting from the purchase price allocation when we regained control of Loulo-Goukoto, lower production across the portfolio (resulting in reduced fixed cost dilution), lower grades processed at a number of operations, higher share-based compensation and higher royalties (impact approximately \$55/oz) associated with the increase in the realized gold price⁶.

Significant adjusting items for 2025 include:

- acquisition/disposition gains of \$1,107 million, mainly relating to the sale of our 50% interest in the Donlin Gold project, our Hemlo gold mine, our interest in the Tongon gold mine and the Alturas project; partially offset by
- other expense adjustments of \$823 million in Q4 2025 which mainly related to the settlement payment to the Government of Mali in November 2025, the fair value increment on inventory resulting from the purchase price allocation when we regained control of Loulo-Goukoto, and reduced operations costs at Loulo-Goukoto.

Refer to page 54 for a full list of reconciling items between net earnings and adjusted net earnings⁶ for the current and previous periods.

Factors affecting operating cash flow and free cash flow⁶ – Q4 2025 versus Q3 2025

In Q4 2025, we generated \$2,726 million in operating cash flow, compared to \$2,422 million in Q3 2025. The increase of \$304 million was primarily due to the higher realized gold price⁶, combined with increased gold sales volumes. These impacts were slightly offset by an increase in gold TCC/oz⁶. Operating cash flow was also negatively impacted by an increase in cash taxes paid and higher interest paid as a result of the timing of semi-annual interest payments on our bonds, which primarily occur in the second and fourth quarters. These results were further impacted by an unfavorable working capital movement, mainly in accounts receivable, partially offset by a favorable movement in inventory.

Free cash flow⁶ for Q4 2025 was \$1,619 million, compared to \$1,479 million in Q3 2025, reflecting higher operating cash flows, partially offset by higher capital expenditures. In Q4 2025, capital expenditures on a cash basis were \$1,107 million compared to \$943 million in Q3 2025, primarily due to higher project capital expenditures⁶ relating to the Lumwana Super Pit Expansion project, combined with higher minesite sustaining capital expenditures⁶ at Pueblo Viejo as a result of restoring fleet reliability and increased activities at the Llagal TSF.

Factors affecting operating cash flow and free cash flow⁶ – 2025 versus 2024

For the year ended December 31, 2025, we generated \$7,689 million in operating cash flow, compared to \$4,491 million in 2024. The increase of \$3,198 million was primarily due to higher realized gold and copper prices⁶, combined with lower copper C1 cash costs/lb⁶. These impacts were partially offset by lower gold sales volumes and an increase in gold TCC/oz⁶. Operating cash flow was further impacted by a favorable movement in working capital, mainly in inventory, VAT receivable and other current liabilities, partially offset by an unfavorable movement in other current assets and accounts payable. These favourable impacts were partially offset by higher cash taxes paid.

For 2025, we generated free cash flow⁶ of \$3,868 million compared to \$1,317 million in 2024. The increase primarily reflects higher operating cash flows, partially offset by higher capital expenditures. In 2025, capital expenditures on a cash basis were \$3,821 million compared to \$3,174 million in 2024, mainly due to higher project capital expenditures⁶ mainly related to costs being capitalized at Reko Diq as the feasibility study was completed in Q4 2024 and at Lumwana on the Super Pit Expansion project, partially offset by lower minesite sustaining capital expenditures⁶ mainly at Loulo-Goukoto as operations were temporarily suspended and the mine was subsequently placed under a temporary provisional administration until December 16, 2025.

Key Business Developments

2025 Highlights

- Gold prices averaged \$3,432 per ounce in 2025, a 44% increase over 2024 and an all-time annual high, and closed the year at \$4,368 per ounce;
- Annual net earnings of \$5.0 billion, earnings per share of \$2.93, adjusted net earnings of \$4.1 billion and adjusted earnings per share of \$2.42 were all records in 2025;
- Record annual operating cash flow of \$7.7 billion and free cash flow⁶ of \$3.9 billion in 2025;
- Year-end cash balance of \$6.7 billion is an all-time high;
- Returned \$2.4 billion to shareholders in 2025, including \$0.9 billion of dividends and \$1.5 billion of share buybacks, also all-time records for the company;
- New dividend policy announced linked to attributable free cash flow;
- Resolved disputes in Mali, securing employees' release and regaining control of the Loulo-Gounkoto mine;
- Portfolio optimization led to the disposition of the Hemlo and Tongon mines, as well as the Donlin and Alturas projects for cash proceeds totalling over \$2.1 billion in 2025; and
- Accelerated drilling over 2025 confirms Fourmile as one of the most significant discoveries this century.

Leadership transition

On February 4, 2026, Mark Hill was appointed as Group President and Chief Executive Officer, following his appointment as Group Chief Operating Officer and Interim President and Chief Executive Officer on September 29, 2025.

Mark Hill has delivered strong performance since his interim appointment and the Board of Directors determined he is the ideal person to lead Barrick through its next phase as President and Chief Executive Officer. Accordingly, the Board's Search Committee has paused its search for this position. Mr. Hill, who was previously responsible for Barrick's LATAM and Asia Pacific region, is a seasoned mining executive with 30 years of experience. He joined Barrick in 2006 and has experience in strategy, corporate development and leading major projects across the world, and was also integral in the initial decision to undertake exploration at the Fourmile gold project in Nevada.

On September 29, 2025, Mark Bristow stepped down as President and CEO after nearly seven years, having joined Barrick following Barrick's merger with Randgold in 2019. Mark Bristow led the successful integration of the two companies, and during his tenure made significant investments in Barrick's world-class assets to better position Barrick to maintain profitable gold and copper growth.

On January 19, 2026, we announced the appointment of Helen Cai as Senior Executive Vice President and Chief Financial Officer. Ms. Cai will become Chief Financial Officer on March 1, 2026, following the departure of Graham Shuttleworth, who will be leaving Barrick. Ms. Cai has served on the Barrick Board of Directors since November 2021 and brings more than two decades of experience in equity research, corporate finance, strategic planning, capital markets, and M&A across the mining, industrial, and technology sectors, primarily with Goldman Sachs and China International Capital Corporation.

North America IPO

As announced on December 1, 2025, the Board authorized Barrick's management team to explore the IPO of an entity that will hold Barrick's premier North American gold assets ("NewCo"). Following a rigorous financial and operational analysis by Barrick's management and its advisors, the Board has concluded that the IPO of NewCo represents the best path for maximizing value for Barrick's shareholders. The Board has authorized Barrick's management to begin preparations for the IPO of NewCo and expects the IPO to be completed by late 2026.

NewCo will hold Barrick's joint venture interests in Nevada Gold Mines and Pueblo Viejo, as well as Barrick's wholly owned Fourmile gold discovery in Nevada. Barrick intends to retain a significant controlling interest in NewCo following the IPO and continue to benefit financially through its majority ownership of NewCo. Barrick will continue to own and drive value in the Company's other world-class gold and copper assets. Barrick expects to provide further details of the IPO in the coming months.

The completion of the IPO will be subject to market conditions and other customary conditions, including any required regulatory approvals and final approval of the IPO by the Barrick Board of Directors.

For this reason, we have also restructured the regional teams within Barrick so that the Pueblo Viejo mine is now included in our North America region. The remaining assets within the newly named South America & Asia Pacific region are Veladero, Porgera and Zaldívar.

Fourmile

In September 2025, we presented an update on the 100% owned Fourmile project in Nevada, further establishing its status as one of the most significant discoveries this century. Refer to page 41 for more information.

Hemlo sale

On September 11, 2025, Barrick announced that it reached an agreement to sell the Hemlo Gold Mine ("Hemlo") in Canada to Carcetti Capital Corp., which was renamed to Hemlo Mining Corp. ("HMC"). The sale agreement provides for gross proceeds of up to \$1.09 billion, consisting of \$875 million of cash proceeds due on closing, HMC shares with an aggregate value of \$50 million, and a production and tiered gold price-linked cash payment structure of up to \$165 million starting in January 2027 for a five-year term. The transaction closed on November 26, 2025 and we recognized a gain on sale of \$545 million and contingent consideration of \$22 million in Q4 2025.

Tongon sale

On October 6, 2025, Barrick announced that it reached an agreement to sell its interests in the Tongon gold mine ("Tongon") and certain of its exploration properties in Côte d'Ivoire to the Atlantic Group for total consideration of up to \$305 million. The consideration is composed of cash consideration of \$192 million, inclusive of a \$23 million shareholder loan repayment within six months of closing, and contingent cash payments totaling up to \$113 million payable based on the price of gold over 2.5 years and resource conversions over 5 years. The transaction closed on December 1, 2025 and we recognized a gain on sale of \$134 million and contingent consideration of \$113 million in Q4 2025.

Loulo-Goukoto Mining Conventions Dispute

The Company and the Government of Mali had engaged in a dispute in connection with the existing mining conventions of Société des Mines de Loulo SA (“Somilo”) and Société des Mines de Goukoto (“Goukoto”) (together, the “Conventions”).

On December 18, 2024, after multiple good faith attempts to resolve the dispute, Somilo and Goukoto submitted a request for arbitration to ICSID in accordance with the provisions of their respective Convention. On January 14, 2025, due to the restrictions imposed by the Government of Mali on gold shipments, the Company announced that the Loulo-Goukoto complex would temporarily suspend operations.

On June 16, 2025, the Bamako Commercial Tribunal placed Loulo-Goukoto under a temporary provisional administration. While Barrick retained its 80% legal ownership of the mining complex, operational control was transferred to an external administrator. As a result of this loss of control event, the assets, liabilities and non-controlling interest of Loulo-Goukoto were deconsolidated and derecognized and a retained investment was recognized at fair value in Q2 2025.

On November 24, 2025, Barrick announced that an agreement had been entered into with the Government of the Republic of Mali to put an end to all disputes regarding the Loulo and Goukoto mines. The provisional administration of the Loulo-Goukoto complex was terminated on December 16, 2025, at which point operational control was handed back to Somilo and Goukoto’s management. This was accounted for as a business acquisition in Q4 2025 where the investment was derecognized and the assets, liabilities and non-controlling interest of Loulo-Goukoto were consolidated from this date again.

For more information, refer to notes 4, 35 and 36 of the Financial Statements.

Donlin Sale

On April 22, 2025, Barrick announced it had entered into an agreement to sell its 50% interest in the Donlin Gold project located in Alaska, USA to affiliates of Paulson Advisers LLC and NOVAGOLD Resources Inc. (“NOVAGOLD”) for total cash consideration of \$1 billion. In addition, Barrick has granted NOVAGOLD an option to purchase the outstanding debt owed to Barrick (value of \$164 million as at September 30, 2025 and presented in Other Assets) in connection with the Donlin Gold project for \$90 million if purchased prior to closing (which was not exercised), or for \$100 million if purchased within 18 months from closing, when the option expires. If that option is not exercised, the debt will remain outstanding, substantially in accordance with its existing terms which would largely defer repayment to the commencement of production.

The transaction closed on June 3, 2025 and we recognized a gain on sale of \$745 million in Q2 2025. In addition, NOVAGOLD retains the option to purchase the outstanding debt for \$100 million within 18 months from closing.

Alturas Sale

On August 8, 2025, Barrick announced that it has reached an agreement to sell the Alturas Project in Chile to a subsidiary of Boroo Pte Ltd (Singapore) (“Boroo”) for an up-front cash payment of \$50 million. In addition, Barrick will be granted a 0.5% net smelter return royalty on gold and silver produced from the Project, which will terminate once 2 million ounces of gold and gold-equivalent have been produced. Boroo may repurchase the royalty within four years from closing for \$10 million. The transaction closed on November 7, 2025 and we recognized a gain on sale of \$53 million in Q4 2025.

Name and Ticker Change

At the Company’s Annual and Special Meeting of Shareholders on May 6, 2025, Barrick’s shareholders approved the change of the Company’s corporate name from Barrick Gold Corporation to Barrick Mining Corporation, which was made effective on that date. In addition, as of May 9, 2025, Barrick’s ticker on the New York Stock Exchange changed to “B” from “GOLD”, better reflecting Barrick’s current business and our mission to achieve sustainable and profitable gold and copper growth. Barrick’s ticker on the TSX remains unchanged.

Board of Directors Changes

Also at the Company’s Annual and Special Meeting of Shareholders on May 6, 2025, two new independent directors were elected to the Board of Directors: Ben van Beurden and Pekka Vauramo. They replaced Christopher Coleman and Andrew Quinn who retired from the Board.

At the August 8, 2025 meeting, the Board of Directors appointed Ben van Beurden as Lead Director, succeeding Brett Harvey who continues to serve on the Board as an independent director.

On November 26, 2025, it was announced that Ben van Beurden had stepped down as a Director of the Board and Lead Independent Director. Loreto Silva has succeeded Ben van Beurden as Lead Independent Director.

At the February 4, 2026 meeting Robert Samek was appointed to the Board of Directors and will join the Audit & Risk and Compensation Committees. In addition, Mark Hill, President and Chief Executive Officer, will join the Company’s Board of Directors as a Non-Independent Director.

New Dividend Policy

On February 4, 2026, the Board of Directors announced the declaration of a \$0.42 per share dividend in respect of performance for the fourth quarter of 2025, representing an increase of 140% over the third quarter, and announced a new dividend policy.

In Q4 2025 and going forward, the Company’s new dividend policy targets a total payout of 50% of attributable free cash flow on an annualized basis, comprised of a fixed base quarterly dividend of \$0.175 per share and a performance top-up component at each year end based on the attributable free cash flow during the year. The dividend paid in any given year may be higher or lower than the 50% target based on the strength of cash flow, capital needs, balance sheet considerations, and other factors.

Share Buyback Program

At the February 11, 2025 meeting, the Board of Directors authorized a share buyback program for the repurchase of up to \$1.0 billion of the Company’s outstanding common shares over the next 12 months. At the November 7, 2025 meeting, on the back of the strong financial performance of the Company, the Board of Directors authorized an increase in the share buyback program for the repurchase of up to an additional \$500 million, raising the total to \$1.5 billion. Barrick repurchased \$500 million of shares in Q4 2025, bringing the 2025 total to \$1.5 billion purchased under this share buyback program.

Outlook for 2026

Operating Division Guidance

Our 2025 actual gold and copper production, cost of sales, TCC⁶, AISC⁶ and 2026 forecast gold and copper production, cost of sales, TCC⁶ and AISC⁶ ranges by operating division are as follows:

a. Gold COS/oz is calculated as cost of sales across our gold operations (excluding sites in closure or care and maintenance) divided by ounces sold (both on an attributable basis using Barrick's ownership share). Copper COS/lb is calculated as cost of sales across our copper operations divided by pounds sold (both on an attributable basis using Barrick's ownership share).

b. Further information on these non-GAAP financial measures, including detailed reconciliations, is included on pages 54 to 67 of this MD&A.

c. Includes Goldrush.

d. Excludes Hemlo as it was divested on November 26, 2025.

e. 2026 forecast cost of sales does not include the impact of the Loulo-Gounkoto purchase price allocation. Refer to note 4 to the Financial Statements for further information.

f. Excludes our share of Tongon as it was divested on December 1, 2025.

g. TCC/oz and AISC/oz include costs allocated to non-operating sites.

h. Operating division guidance ranges reflect expectations at each individual operating division, and may not add up to the company-wide guidance range total.

i. Includes corporate administration costs.

Operating Division, Consolidated Expense and Capital Guidance

Our 2025 actual gold and copper production, cost of sales, TCC⁶, AISC⁶, consolidated expenses and capital expenditures and 2026 forecast gold and copper production, cost of sales, TCC⁶, AISC⁶, consolidated expenses and capital expenditures are as follows:

(\$ millions, except per ounce/pound data)	2025 Guidance ^a	2025 Actual	2026 Guidance ^a

Total attributable capital expenditures ^d	3,100 – 3,600	3,011	4,000 – 4,450

a. Guidance ranges exclude Long Canyon which is producing incidental ounces from the leach pad while in closure.

b. Further information on these non-GAAP financial measures, including detailed reconciliations, is included on pages 54 to 67 of this MD&A.

c. 2025 actual results are based on a US\$45.76 share price and 2026 guidance is based on the same share price.

d. Attributable capital expenditures are presented on the same basis as guidance, which includes our 61.5% share of NGM, our 60% share of Pueblo Viejo, our 89.7% share of Tongon up until its divestiture on December 1, 2025, our 84% share of North Mara and Bulyanhulu, our 45% share of Kibali, our 50% share of Zaldivar and Jabal Sayid, and our 24.5% share of Porgera. Total attributable capital expenditures for 2025 actual results also includes capitalized interest of \$52 million.

2026 Guidance Analysis

Estimates of future production, COS/oz⁷, TCC/oz⁶ and AISC/oz⁶ presented in this MD&A are based on mine plans that reflect the expected method by which we will mine reserves at each site. Actual gold and copper production and associated costs may vary from these estimates due to a number of operational and non-operational risk factors (see the “Cautionary Statement on Forward-Looking Information” on page 6 of this MD&A for a description of certain risk factors that could cause actual results to differ materially from these estimates).

Gold Production

We expect 2026 gold production to be in the range of 2.90 to 3.25 million ounces, compared to our actual 2025 gold production of 3.26 million ounces. In Q4 2025, we divested our interests in Hemlo and Tongon and when those two assets are excluded, our 2025 production was 3.0 million ounces. The most significant driver of the increase for 2026 across the continuing assets is the additional production from Loulo-Goukoto following the return of control in late Q4. Across the remainder of the portfolio, we expect Pueblo Viejo to deliver a slightly higher year-over-year performance with offsetting decreases at Veladero and North Mara. At Carlin, we expect 2026 production to be slightly lower than 2025 driven by open pit mine sequencing although this is expected to be partially offset by higher deliveries of Cortez material processed through the Carlin roasters. At Turquoise Ridge, we expect lower underground grades as per the planned mining sequence. We expect stable delivery for the other assets.

Across the four quarters of 2025, the Company’s gold production is expected to be the lowest in Q1 (between 640 to 680koz) and highest in Q3 and Q4 due to the ramp-up of Loulo-Goukoto, the timing of shutdowns, the Goldrush ramp-up and mine sequencing across the NGM sites. This is expected to result in an approximately 45% / 55% split of the Company’s total gold production between the first half and second half of the year, respectively.

Gold Cost of Sales per Ounce⁷

On a per ounce basis, cost of sales applicable to gold⁷, after removing the portion related to non-controlling interests, is expected to be in the range of \$1,870/oz to \$2,070/oz in 2026, compared to the 2025 actual result of \$1,697/oz.

The drivers of the increase are higher depreciation and for the reasons described in the Gold TCC/oz⁶ section immediately below. The higher depreciation on a per ounce basis is mainly driven by Loulo-Goukoto and NGM. At the former, it relates to the provisional purchase price allocation following the return of control. At NGM, it relates to ore mined from South Arturo (within Carlin) and Crossroads (within Cortez) where capitalized stripping was incurred in prior periods and as the ore is mined in 2026, it carries a higher depreciation charge on a per ounce basis relative to the other feed at these two sites. In addition to this, across the other assets, reinvestment in the business is also contributing to higher depreciation as we incur a full 12 months of depreciation on the newly installed assets.

Gold Total Cash Costs per Ounce⁶

TCC/oz⁶ in 2026 is expected to be in the range of \$1,330/oz to \$1,470/oz, compared to the 2025 actual result of \$1,199/oz.

Our 2026 cost guidance for TCC/oz⁶ is based on a gold price assumption of \$4,500/oz whereas the average gold price realized for 2025 was \$3,501/oz. This difference of \$999/oz represents around \$60/oz of the increase in TCC/oz⁶. Furthermore, the average royalty rate for our Loulo-Goukoto mine is now 18% as a result of the royalties and duties applicable under the 2023 Mining Code. This has increased the overall sensitivity of the costs incurred at our mines to the gold price and has amplified the impact of the gold price increase because the Loulo-Goukoto mine is expected to produce 260 to 290koz in 2026 compared to the 29koz in 2025.

In our North America region (which also includes our Pueblo Viejo mine from 2026), our 2026 guidance for TCC/oz⁶ for NGM of \$1,300/oz to \$1,440/oz compares to the 2025 actual result of \$1,229/oz. The higher gold price assumption represents ~\$35/oz of the increase. We are also expecting lower grades mined from the open pits driven by the mine plans and more material hauled from Cortez to the Carlin roasters (which adds to the cost profile). In addition, for 2026 we expect that the price of key consumables will remain at higher levels driven by increased tariffs whereas in 2025, this was more muted until Q4.

For our Africa & Middle East region, TCC/oz⁶ is expected to be in the range of \$1,490/oz to \$1,640/oz, which is an increase compared to 2025 mainly driven by the higher production from Loulo Goukoto at a higher cost base as we focus on ramping up the mine following the return of control in mid December 2025 and at North Mara where lower grades are planned to be fed during 2026 compounded by a higher strip ratio year on year. The higher gold price assumption also represents ~\$30/oz of the increase in 2026 relative to 2025 based on our \$4,500/oz gold price assumption.

Gold All-In Sustaining Costs per Ounce⁶

AISC/oz⁶ in 2026 is expected to be in the range of \$1,760/oz to \$1,950/oz, compared to the 2025 actual result of \$1,637/oz. ~\$60/oz of this increase is driven by the higher gold price assumption of \$4,500/oz used for our 2026 guidance. The remainder of the increase is based on the expectation that minesite sustaining capital expenditures⁶ on a per ounce basis will be slightly higher than 2025 (refer to Capital Expenditures commentary below for further detail).

Copper Production and Costs

We expect 2026 copper production to be in the range of 190 to 220 thousand tonnes, compared to actual production of 220 thousand tonnes in 2025. Production is expected to be highest in Q2 and Q3 with Q1 being the lowest quarter of the year mainly driven by grade at Lumwana as per the mine plan.

In 2026, cost of sales applicable to copper⁷ is expected to be in the range of \$3.05/lb to \$3.35/lb, which compares to the actual result of \$2.91/lb for 2025. Our 2026 cost guidance for cost of sales/lb⁶ is based on a copper price assumption of \$5.50/lb whereas the average realized copper price for 2025 was \$4.72/lb. This difference of \$0.78/lb represents around \$0.05/lb of the increase. In addition, higher maintenance costs at Lumwana driven by an optimized planned change out schedule to improve availabilities and deliverability of the mine plan. C1 cash costs/lb⁶ guidance of \$2.20/lb to \$2.45/lb for 2026 compares to the 2025 actual result of \$2.14/lb, mainly driven by the higher costs at Lumwana as referred to above. Copper AISC/lb⁶ guidance of \$3.45/lb to \$3.75/lb for 2026 compares to the actual result of \$3.20/lb in 2025 with higher costs expected at Zaldívar and Lumwana.

Exploration and Project Expenses

We expect to incur approximately \$450 to \$500 million of exploration and project expenses in 2026. This is higher than our 2025 guidance range, and compares to the 2025 actual result of \$367 million. The drivers of the higher spend are detailed below.

Within this range, we expect our exploration and evaluation expenditures in 2026 to be approximately \$320 to \$350 million. This is higher than the 2025 actual result of \$247 million driven by an increase in spending at Barrick's 100% owned Fourmile project where we expect our drilling spend to increase to \$150 to \$160 million. This is partially offset by a lower spend across the rest of the portfolio. This spend on exploration and evaluation expenditures will continue to support our resource and reserve conversion over the coming years continuing our record of replacing the reserves we mine.

We also expect to incur approximately \$130 to \$150 million of project expenses in 2026, compared to \$120 million in 2025. The driver of this increase is that we expect to incur costs of \$20 million on studies work for Barrick's 100% owned Fourmile project. The remainder of the expected spend for 2026 relates to corporate development activities, Pascua-Lama and project costs at NGM.

General and Administrative Expenses

In 2026, we expect corporate administration costs to be approximately \$120 million given our track record over the last seven years of consistently delivering costs below the guidance.

Separately, stock-based compensation expense in 2026 is expected to be approximately \$60 million based on a share price assumption of \$37.60 noting that the actual outcome will be impacted by the share price movements over the course of the 2026 year.

Finance Costs, Net

In 2026, our guidance range for net finance costs of \$230 to \$250 million primarily represents interest expense on long-term debt, non-cash interest expense relating to the gold and silver streaming agreements at Pueblo Viejo, and accretion, net of finance income. This guidance for 2026 is slightly higher than the actual result for 2025 of \$227 million, and reflects our expectation that market interest rates will on average be lower relative to 2025, translating to lower interest income earned on our cash balance. Interest expense incurred on our bonds is at a fixed rate and consequently does not change with market interest rates.

Capital Expenditures

Total attributable gold and copper capital expenditures for 2026 are expected to be in the range of \$4,000 to \$4,450 million. This is higher than the actual spend for the 2025 year of \$3,011 million driven by the advancement of both the Lumwana Super Pit Expansion project and the Reko Diq project. At Lumwana, the capital spend on the growth project is expected to be \$750 to \$850 million and at Reko Diq the capital expenditure is expected to be \$600 – \$700 million (Barrick's 50% share). Inclusive of these two major projects, we expect attributable project capital expenditures⁶ to be in the range of \$2,500 to \$2,750 million in 2026, which is higher than our actual expenditures of \$1,399 million in 2025. Across the Company's gold assets, the material growth projects relate to Barrick's 100% owned Fourmile project in Nevada, the new Naranjo tailings facility at Pueblo Viejo, the Goldrush ramp-up at Cortez and the Ren project at Carlin.

Attributable minesite sustaining capital expenditures⁶ for 2026 are expected to be in the range of \$1,500 to \$1,700 million, which compares to the actual spend for 2025 of \$1,560 million. The guidance range for 2026 is split between our gold assets (\$1,100 to \$1,250 million) and copper assets (\$400 to \$450 million). Compared to the prior year, minesite sustaining capital expenditures⁶ in 2026 are expected to be only slightly higher than 2025 across the Company's gold assets, with higher expenditure at Loulo-Gounkoto and Pueblo Viejo offset by a lower spend at Veladero (plus the divestiture of Hemlo and Tongon). For the copper assets, minesite sustaining capital expenditures⁶ in 2026 are expected to be around \$100 million higher than 2025 with a higher spend expected at Zaldívar and to a lesser extent Lumwana.

Effective Income Tax Rate

Based on a gold price assumption of \$4,500/oz, our expected effective tax rate range for 2026 is 24% to 28%. The rate is sensitive to the relative proportion of sales in high versus low tax jurisdictions, realized gold and copper prices, the proportion of income from our equity accounted investments and the level of non-tax affected costs in countries where we generate net losses.

Outlook Assumptions and Economic Sensitivity Analysis

	2026 Guidance Assumption	Hypothetical Change	Consolidated impact on EBITDA ^a (millions)	Attributable impact on EBITDA ^a (millions)	Attributable impact on TCC and AISC ^a
Gold price sensitivity	\$ 4,500/oz	+/- \$100/oz	+/- \$650	+/- \$300	+/- \$5/oz
Copper price sensitivity	\$ 5.50/lb	+/- \$0.25/lb	+/- \$110	+/- \$110	+/- \$0.02/lb

a. Further information on these non-GAAP financial measures, including detailed reconciliations, is included on pages 54 to 67 of this MD&A.

Three Year (2026-2028) Production Outlook

We expect Cortez, Loulo-Gounkoto, Kibali, North Mara and Phoenix to deliver higher year-over-year performances in 2027 relative to 2026,

together with stable delivery across the rest of the portfolio. In 2028, the increase in gold production is driven by NGM and for copper by Lumwana. Our gold and copper production outlook over the next three years are as follows:

	2026 Guidance	2027 Outlook	2028 Outlook
Gold production (millions of ounces)	2.90 – 3.25	3.30 – 3.65	3.40 – 3.75
Copper production (thousands of tonnes)	190 – 220	195 – 225	255 – 285

Sustainability

Barrick's vision for sustainability is underpinned by the knowledge that sustainability aspects are interconnected and must be tackled in conjunction with, and reference to, each other. We call this approach Holistic and Integrated Sustainability Management. We must tackle all sustainability aspects holistically and concurrently to make meaningful progress in any single aspect. Although we integrate our sustainability management, we discuss our sustainability strategy within four overarching pillars: (1) respecting human rights; (2) protecting the health and safety of our people and local communities; (3) sharing the benefits of our operations; and (4) managing our impacts on the environment.

We implement this strategy by blending top-down accountability with bottom-up responsibility. This means we place the day-to-day ownership of sustainability, and the associated risks and opportunities, in the hands of individual sites. In the same way that each site must manage its geological, operational and technical capabilities to meet business objectives, it must also manage its environment and people. This is achieved through identification of programs, metrics, and targets that measure progress and deliver value for the business and our stakeholders, including our host countries and local communities.

The Group Sustainability Executive, supported by regional sustainability leads, provides oversight and direction over this site-level ownership, to ensure alignment with the strategic priorities of the overall business.

Governance

The bedrock of our sustainability strategy is strong governance. Our most senior management-level body dedicated to sustainability is the E&S Committee, which connects site-level ownership of our sustainability strategy with the leadership of the Group. It is chaired by the Group Chief Operating Officer and Interim President and Chief Executive Officer and includes: (1) regional Chief Operating Officers; (2) minesite General Managers; (3) Health, Safety, Environment and Closure Leads; (4) the Group Sustainability Executive; (5) in-house legal counsel; and (6) an independent sustainability consultant in an advisory role. The E&S Committee meets on a quarterly basis to review our performance across a range of key performance indicators, and to provide independent oversight and review of sustainability management.

The Group Chief Operating Officer and Interim President and Chief Executive Officer reviews the reports of the E&S Committee at every quarterly meeting of the Board's ESG & Nominating Committee. The reports are reviewed to ensure the implementation of our sustainability policies and to drive performance of our environmental, health and safety, community relations and development and human rights programs.

This is supplemented by weekly meetings, at a minimum, between the Regional Sustainability Leads and the Group Sustainability Executive. These meetings examine the sustainability-related risks and opportunities facing the business, as well as the progress and issues integrated into weekly Executive Committee review meetings.

Incentive payments for senior leaders under Barrick's Partnership Plan are tied to Sustainability performance. For 2025, this comprised a 20% weighting under the annual incentive program based on our annual safety and environment performance, and a 20% weighting under our Long-Term Company Scorecard linked to the assessment of our industry-first Sustainability Scorecard. The Sustainability Scorecard targets and metrics are updated annually to ensure continuous improvement. The results of the 2025 Sustainability Scorecard will be published in the Annual Report and Sustainability Report during the first half of 2026. The E&S Committee tracks our progress against all scorecard metrics on a quarterly basis.

Human rights

Our commitment to respect human rights is codified in our standalone Human Rights Policy and informed by the expectations of the United Nations Guiding Principles on Business and Human Rights, the OECD Guidelines for Multinational Enterprises, and the Voluntary Principles on Security and Human Rights. This commitment is fulfilled on the ground via our Human Rights Program, the fundamental principles of which include: due diligence, risk identification and management, monitoring and reporting, training, and where appropriate disciplinary action and remedy.

We continue to assess and manage security and human rights risks at all our operations and provide security and human rights training to private and public security forces across our sites. During 2025, independent human rights assessments were undertaken at the following sites: North Mara in Tanzania; Veladero in Argentina; and Porgera in Papua New Guinea.

Safety

We are committed to the safety, health and well-being of our people, their families and the communities in which we operate to achieve our safety vision for "Everyone to go home safe and healthy every day."

Our Management-Level Safety Committee continues to drive the implementation of the "Journey to Zero" initiative. The current priority is the development of operational standards, improving the quality of safety leadership interactions and critical control verifications through extensive training programs.

We report our safety performance quarterly as part of both our E&S Committee meetings and our reports to the ESG & Nominating Committee. Our safety performance is the first item on our weekly Executive Committee review meeting.

As part of our Journey to Zero, we have identified four key elements in developing a culture that fosters a strong and effective focus on safety: (1) Leadership and Culture, (2) Zero Fatalities, (3) Risk Management and hazard identification, and (4) Prevention of Injuries.

Overall, the Group saw an improvement in their LTIFR and TRIFR performance over the prior year – the latter of which was one of the best among the ICMM peers in 2024. The TRIFR⁸ of 0.71 improved by 24% compared to 2024 and the severity of injuries has been reduced significantly, as evidenced by a 31% decrease in LTIFR⁹ from the prior year to 0.09.

Notwithstanding these positive improvements on lagging indicators, it is with regret that these advancements were overshadowed by four fatalities that occurred during 2025; one at NGM, one at Bulyanhulu and two at Kibali. All four incidents occurred underground, two of which related to individuals operating mobile equipment near open stopes and holes, and the remaining two incidents associated with individuals placing themselves in the line of fire of mobile equipment. Our focus remains on the Fatal Risk Management program, entailing Fatal Risk standards, operational standards and critical controls. The Critical Control Verifications roll out and adoption has been successful in the field, with focus now shifting to quality of interactions.

Social

We regard our host communities and countries as important partners in our business. Our sustainability policies commit us to transparency in our relationships with host communities, government authorities, the public and other key stakeholders. Through these policies, we commit to conducting our business with integrity and with absolute opposition to corruption. We require our suppliers to operate ethically and responsibly as a condition of doing business with us.

Community and economic development

Our commitment to social and economic development is set out in our overarching Sustainable Development and Social Performance policies. Mining has been identified as vital for the achievement of the United Nations SDGs, not only for its role in providing the minerals needed to enable the transition to a lower carbon intensive economy, but more importantly because of its ability to drive socio-economic development and build resilience. Creating long-term value and sharing economic benefits is at the heart of our approach to sustainability, as well as community development. This approach is encapsulated in three concepts:

The primacy of partnership: this means that we invest in real partnerships with mutual responsibility. Partnerships include local communities, suppliers, governments and organizations, and this approach is epitomized through our CDCs with development initiatives and investments.

Sharing the benefits: We hire and buy local wherever possible as this injects money into and keeps it in our local communities and host countries. By doing this, we build capacity, community resilience and create opportunity. We also invest in community development through our CDCs. Sharing the benefits also means paying our fair share of taxes, royalties and dividends and doing so transparently, primarily through the reporting mechanism of the Canadian Extractive Sector Transparency Measures Act. Our annual Tax Contribution Report, most recently published in May 2025, sets out, in detail, our economic contributions to host governments.

Engaging and listening to stakeholders: We develop tailored stakeholder engagement plans for every operation and the business as a whole. These plans guide and document how often we engage with various stakeholder groups and allow us to proactively deal with issues before they escalate into significant risks.

Our community development spend for 2025 totaled nearly \$61 million.

Environment

We know the environment in which we work and our host communities are inextricably linked, and we apply a holistic and integrated approach to sustainability management. We can deliver significant cost savings to our business, reduce future liabilities and help build stronger stakeholder relationships by being responsible stewards of the environment. This includes applying the highest standards of environmental management, using natural resources and energy efficiently, recycling and reducing waste, as well as working to protect biodiversity. Environmental matters such as how we use water, prevent incidents, manage tailings, respond to changing climate and protect biodiversity are key areas of focus.

We maintained our strong track record of stewardship and did not record any Class 1⁹ environmental incidents in 2025.

Climate Change

The Board's ESG & Nominating Committee is responsible for overseeing Barrick's policies, programs and performance relating to sustainability and the environment, including climate change. The Audit & Risk Committee assists the Board in overseeing the Group's management of enterprise risks as well as the implementation of policies and standards for monitoring and mitigating such risks. Climate change is built into our formal risk management process, outputs of which are regularly reviewed by the Audit & Risk Committee.

Barrick's climate change strategy has three pillars: (1) identify, understand and mitigate the risks associated with climate change; (2) measure and reduce our GHG emissions across our operations and value chain; and (3) improve our disclosure on climate change. The three pillars of our climate change strategy do not focus solely on the development of emissions reduction targets, rather, we integrate and consider aspects of biodiversity protection, water management and community resilience in our approach.

We are acutely aware of the impacts that climate change and extreme weather events have on our host communities and countries, particularly developing nations which are often the most vulnerable. As a responsible business, we have focused our efforts on building resilience in our host communities and countries, just as we do for our business. Our climate disclosure is based on the recommendations of the TCFD.

Identify, understand and mitigate the risks associated with climate change

We identify and manage risks, build resilience to a changing climate and extreme weather events, as well as position ourselves for new opportunities. These factors continue to be incorporated into our formal risk assessment process. We have identified several risks and opportunities for our business including: physical impacts of extreme weather events; an increase in regulations that seek to address climate change; and an increase in global investment in innovation and low-carbon technologies.

The risk assessment process includes climate scenario analysis to assess site-specific climate-related risks and opportunities. The key findings and a summary of material physical and transitional risk assessment were disclosed as part of our CDP (formerly known as the Carbon Disclosure Project) questionnaire, submitted to CDP in September 2025. CDP scored Barrick's stewardship and transparency an A- (best practice class) for both climate change and water.

Measure and reduce the Group's impact on climate change

Mining is an energy-intensive business, and we understand the important link between energy use and GHG emissions. By measuring and effectively managing our energy use, we can reduce our GHG emissions, achieve more efficient production and reduce our costs.

We have climate champions at each site who are tasked with identifying roadmaps and assessing feasibility for our GHG emissions reductions and carbon offsets for hard-to-abate emissions. Any carbon offsets that we pursue must have appropriate socioeconomic and/or biodiversity benefits. We have published an achievable emissions reduction roadmap and continue to assess further reduction opportunities across our operations. The detailed roadmap was first published in our 2021 Sustainability Report and includes committed capital projects and projects under investigation that rely on technological advances, with a progress summary contained in the 2024 Sustainability Report.

We continue to progress our extensive work across our value chain in understanding our Scope 3¹⁰ (indirect emissions associated with the value chain) emissions and implementing our engagement roadmap to enable our key suppliers to set meaningful and measurable reduction targets, in line with the commitments made through the ICMM Climate Position Paper.

Improve our disclosure on climate change

Our disclosure on climate change, including in our Sustainability Report and on our website, is developed in line with the TCFD recommendations. Barrick continues to monitor the various regulatory climate disclosure standards being developed around the world, including the International Sustainability Standards Board's S2 *Climate-related Disclosures* standard. In addition, we complete the annual CDP Climate Change and Water Security questionnaire. This ensures our investor-relevant water use, emissions and climate data is widely available.

Emissions

Barrick's interim GHG emissions reduction target was established in 2018 based on a steady state production profile. As Barrick's production is forecast to increase towards the end of the decade, with major projects expected to be commissioned, such as Goldrush, Reko Diq, the Lumwana Super Pit expansion and the Pueblo Viejo expansion, the Group's GHG reduction targets were updated and published in the 2024 Sustainability Report. The updated reduction target is for a minimum 30% intensity reduction by 2030 against our 2018 baseline. The basis of this reduction is against a 2018 baseline of 7,541 kt CO₂-e and intensity of 0.47 t CO₂-e per tonne of ore processed.

Ultimately, our vision is net zero GHG emissions by 2050, achieved primarily through GHG reductions, with some offsets for hard-to-abate emissions. Site-level plans to improve energy efficiency, integrate clean and renewable energy sources and reduce GHG emissions will also be strengthened.

During the fourth quarter of 2025, the Group's total Scope 1 and 2¹⁰ (location-based) GHG emissions were 1,928 kt CO₂-e. The preliminary 2025 annual Scope 1 and 2 emissions are 7,722 kt CO₂-e¹¹ (location-based). Increased emissions from 2024 are due predominantly to higher limestone use for neutralization at Pueblo Viejo, and increased production at Porgera.

Water

Water is a vital and increasingly scarce global resource. Managing and using water responsibly is one of the most critical parts of our sustainability strategy. Our commitment to responsible water use is codified in our Environmental Policy and standalone Water Policy. Steady, reliable access to water is critical to the effective operation of our mines. Access to water is also a fundamental human right.

Understanding the water stress in the regions in which we operate enables us to better understand the risks and manage our water resources through site-specific water balances, based on the ICMM Water Accounting Framework, aimed at minimizing our water withdrawal and maximizing water reuse and recycling within our operations.

We include each mine's water risks in its operational risk register. These risks are then aggregated and incorporated into the Group risk register. Our identified water-related risks include: (1) managing excess water in regions with high rainfall; (2) maintaining access to water in arid areas and regions prone to water scarcity; and (3) regulatory risks related to permitting limits as well as municipal and national regulations for water use.

We set an annual water recycling and reuse target of 80%. Our water recycling and reuse rate for Q4 2025 and the year achieved this target, with performance at 82% and 81%, respectively.

Tailings

We are committed to having our TSFs meet global best practices for safety. Our TSFs are carefully engineered and regularly inspected, particularly those in regions with high rainfall and seismic events.

We disclosed our conformance to the GISTM for all Extreme and Very High consequence facilities on the Barrick website in August 2023, within the GISTM disclosure timeframe. All of our sites that are classified as Very High or Extreme consequence are in conformance with the GISTM. We disclosed our conformance to the GISTM for all remaining tailings facilities in August 2025.

Biodiversity

Biodiversity underpins many of the ecosystem services on which our mines and their surrounding communities depend. If improperly managed, mining and exploration activities have the potential to negatively affect biodiversity and ecosystem services. Protecting biodiversity and preventing nature loss is also critical and inextricably linked to the fight against climate change. We work to proactively manage our impact on biodiversity and strive to protect the ecosystems in which we operate. Wherever possible, we aim to achieve a net neutral biodiversity impact, particularly for ecologically sensitive environments.

We continue to work to implement our BAPs. The BAPs outline our strategy to achieve no-net loss for all key biodiversity features and their associated management plans.

Market Overview

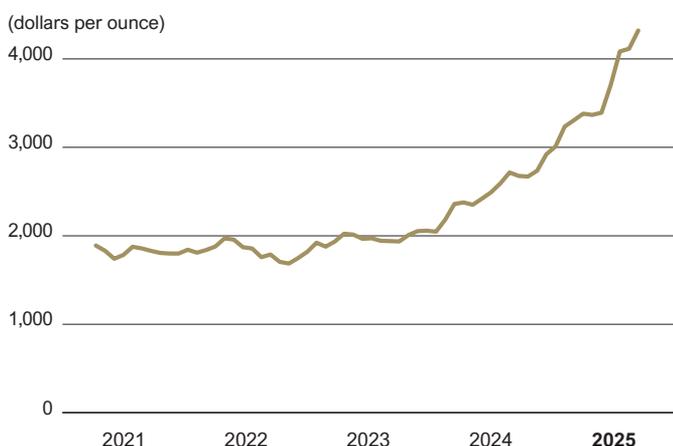

The market prices of gold and, to a lesser extent, copper are the primary drivers of our profitability and our ability to generate free cash flow⁶ for our shareholders.

Gold

The price of gold is subject to volatile price movements over short periods of time and is affected by numerous industry and macroeconomic factors. During 2025, the gold price ranged from \$2,615 per ounce to an all-time high of \$4,550 per ounce. The average market price for the year of \$3,432 per ounce also represented an all-time annual high, and a 44% increase from the 2024 average of \$2,386 per ounce.

During the year, the gold price rose strongly, reaching all-time high nominal and average prices, as inflation pressures eased, benchmark interest rates were cut, and the trade-weighted US dollar weakened while the global economic outlook remained uncertain and geopolitical conflicts persisted, underscoring gold's role as a safe haven investment and store of value.

AVERAGE MONTHLY SPOT GOLD PRICES

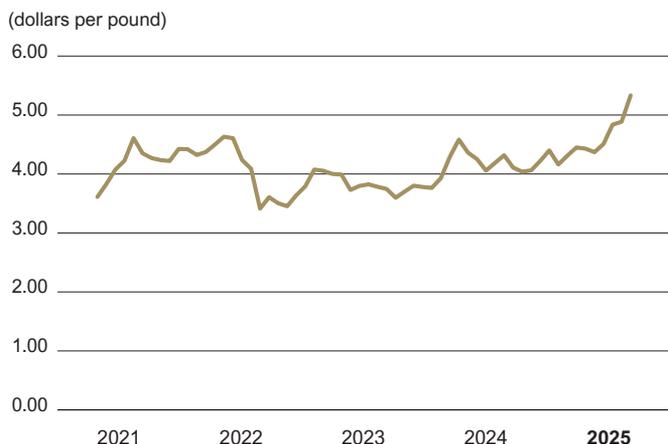

Copper

During 2025, London Metal Exchange copper prices traded in a range of \$3.68 per pound to an all-time high of \$5.88 per pound, averaged \$4.51 per pound, and closed the year at \$5.67 per pound. Copper prices are heavily influenced by physical demand from emerging markets, especially China.

Copper prices in 2025 were impacted by tariff concerns, supply disruptions, reductions in benchmark interest rates, and a decrease in the trade-weighted US dollar.

AVERAGE MONTHLY SPOT COPPER PRICES

We have provisionally priced copper sales for which final price determination versus the relevant copper index is outstanding at the balance sheet date. As at December 31, 2025, we recorded 56 million pounds of copper sales still subject to final price settlement at an average provisional price of \$5.34 per pound. The impact to net income before taxation of a 10% movement in the market price of copper would be approximately \$30 million, holding all other variables constant.

Currency Exchange Rates

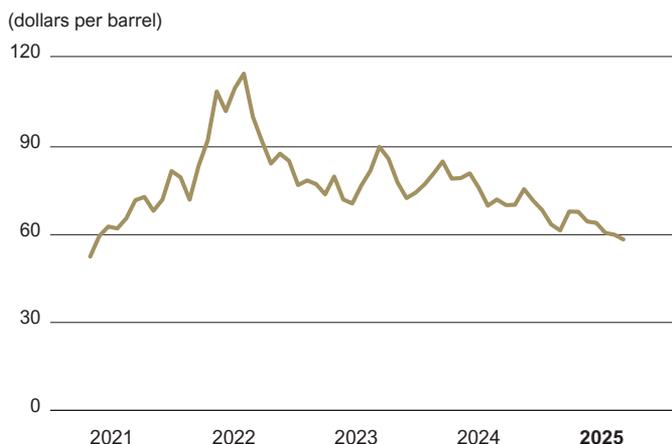

The results of our mining operations outside of the United States are affected by fluctuations in exchange rates. We have exposure to the Argentine peso through operating costs at our Veladero mine, and peso denominated VAT receivable balances. We also have exposure to the Canadian and Australian dollars, Chilean peso, Papua New Guinea kina, Zambian kwacha, Tanzanian shilling, Dominican peso, West African CFA franc, euro, South African rand, and British pound through mine operating and capital costs. In addition, we also have exposure to the Pakistani rupee through project costs and capital costs on Reko Diq.

Fluctuations in these exchange rates increase the volatility of our costs reported in US dollars. In 2025, the Australian dollar traded in a range of \$0.59 to \$0.67 against the US dollar, while the US dollar against the Canadian dollar and West African CFA franc ranged from \$1.35 to \$1.48 and XOF 550 to XOF 647, respectively. Due to inflationary pressures in Argentina and the actions of the government, there was a continued weakening of the Argentine peso during the year and it ranged from ARS 1,031 to ARS 1,492.

Fuel

For 2025, the price of WTI crude oil traded in a range between \$55 and \$81 per barrel, with the market price averaging \$65 per barrel, and closing the year at \$57 per barrel. Oil prices were impacted by concerns about global economic growth, managed supply, and geopolitical concerns, including the ongoing invasion of Ukraine by Russia, conflicts in the Middle East and uncertainty related to Venezuela.

AVERAGE MONTHLY SPOT CRUDE OIL PRICE (WTI)

US Dollar Interest Rates

During 2025, as inflationary pressures continued to ease, benchmark interest rates were cut by a total of 75 bps to a range of 3.50% to 3.75% by the end of the year. Changes to monetary policy in 2026 will be dependent on economic data to be observed during the year.

At present, our interest rate exposure mainly relates to interest income received on our cash balances (\$6.7 billion at December 31, 2025); the carrying value of certain non-current assets and liabilities; and the interest payments on our variable-rate debt (less than \$0.05 billion at December 31, 2025). Currently, the amount of interest expense recorded in our consolidated statement of income is not materially impacted by changes in interest rates, because the majority of our debt was issued at fixed interest rates. The relative amounts of variable-rate financial assets and liabilities may change in the future, depending on the amount of operating cash flow we generate, as well as the level of capital expenditures and our ability to borrow on favorable terms using fixed rate debt instruments. Changes in interest rates affect the accretion expense recorded on our provision for environmental rehabilitation and therefore would affect our net earnings.

Reserves and Resources¹²

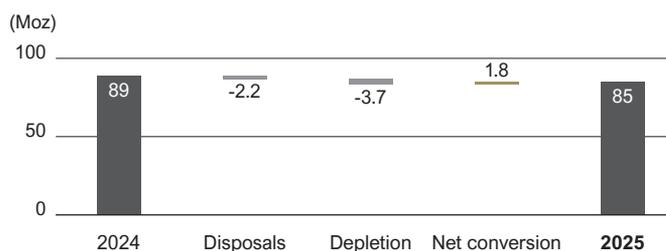

For full details of our mineral reserves and mineral resources, refer to page 73 of Barrick's Annual Report 2025.

Gold Reserves and Resources

Barrick's 2025 gold mineral reserves and resources are estimated using a gold price assumption of \$1,500 and \$2,000 per ounce, increased from \$1,400 and \$1,900 in 2024 respectively. Both are reported to a rounding standard of two significant digits for tonnes and metal content, with grades reported to two decimal places.

As of December 31, 2025, Barrick's proven and probable gold mineral reserves were 85 million ounces¹³ at an average grade of 0.98 g/t, from 89 million ounces¹⁴ at an average grade of 0.99 g/t in 2024. This represents a year-over-year, attributable mineral reserves decrease of 4.1 million ounces, which was a result of the Tongon and Hemlo divestitures which accounted for a reduction of 2.2 million ounces alongside 3.7 million ounces of 2025 annual depletion partially offset by 1.8 million ounces of additions associated with commodity price change and exploration additions. Although depletion was higher than net conversion by 1.9 million ounces for 2025, the three-year rolling average gold mineral reserve replacement stands close to 190% adding more than 24 million ounces to gold mineral reserves (excluding both acquisitions and divestments), primarily supported by 17 million ounces¹⁵ of net change in the prior year. Furthermore three year average gold-equivalent net replacement is in excess of 500% supported by the Reko Diq and Lumwana feasibility studies in the prior year.

ATTRIBUTABLE CONTAINED GOLD RESERVES^{13,14,a}

a. Figures rounded to two significant digits.

Barrick attributable measured and indicated gold resources for 2025 stand at 150 million ounces¹³ at 1.01 g/t, with a further 43 million ounces¹³ at 1.0 g/t of inferred resources. Measured and indicated mineral resources reduced by 20 million ounces as a result of the divestiture of Donlin and a further 2.2 million ounces as a result of the divestiture of Alturas. Overall divestitures in 2025 accounted for a reduction of 26 million ounces of measured and indicated mineral resources and 7.3 million ounces of inferred mineral resources respectively. Aside from the divestitures, we delivered net additions across the rest of the portfolio of more than 14 million ounces of mineral resources as detailed further below^{13,14}.

Mineral resources are reported inclusive of mineral reserves and both tonnes and metal content are reported to a rounding standard of two significant digits for tonnes and metal content. Measured and indicated mineral resource grades are reported to two decimal places, whilst inferred mineral resource grades are reported to one decimal place.

In North America, the ongoing growth drilling at Fourmile grew inferred mineral resources to 13 million ounces¹³ at 16.9 g/t in 2025, from 6.4 million ounces¹⁴ at 14.1 g/t in 2024. Similarly, closer spaced conversion drilling at Fourmile also more than doubled indicated mineral resources to 2.6 million ounces¹³ at 17.59 g/t from 1.4 million ounces¹⁴ at 11.76 g/t. The substantial increases in gold mineral resources at Fourmile supports the possibility for potential future conversions.

The Pueblo Viejo mineral reserves and resources are reported as part of the North American region for 2025 and were previously reported as part of the South America & Asia Pacific region in 2024.

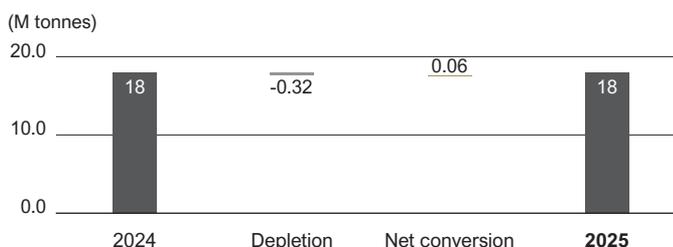

Overall gold mineral measured and indicated resources in the Africa & Middle East region, after annual depletion, grew to 32 million ounces¹³ at 3.20 g/t in 2025 from 31 million ounces¹⁴ at 3.26 g/t in 2024. This was predominantly driven by both Kibali and North Mara, with extensions of the ARK, Gea and Rama open pit orebodies respectively. Similarly inferred gold mineral resources within the Africa & Middle East region grew to 5.8 million ounces¹³ at 2.8 g/t in 2025 from 5.2 million ounces¹⁴ at 3.1 g/t in 2024.

Copper Reserves and Resources

For Barrick-operated assets, copper mineral reserves for 2025 are estimated using a copper price assumption of \$3.25 per pound, increased from \$3.00 per pound in 2024. Copper mineral resources for 2025 are estimated using a price of \$4.50 per pound also increased from \$4.00 per pound in 2024. Both are reported to a rounding standard of two significant digits, for tonnes and metal content, with grades reported to two decimal places.

Attributable proven and probable copper mineral reserves remained at 18 million tonnes of copper¹³ at 0.46% in 2025 on an attributable basis, from 18 million tonnes of copper¹⁴ at 0.45% in 2024.

ATTRIBUTABLE CONTAINED COPPER RESERVES^{13,14,a}

a. Figures rounded to two significant digits.

Barrick’s attributable measured and indicated resources for 2025 stands at 24 million tonnes of copper¹³ at 0.39%, with a further 4.2 million tonnes of copper¹³ at 0.3% of inferred resources, reflecting increases related to the change in commodity pricing. Mineral resources are reported inclusive of mineral reserves and both tonnes and metal content are reported to a rounding standard of two significant digits for tonnes and metal content. Measured and indicated mineral resource grades are reported to two decimal places, whilst inferred mineral resource grades are reported to one decimal place.

2025 mineral reserves and mineral resources are estimated using the combined value of gold, copper and silver. Accordingly, mineral reserves and mineral resources are reported for all assets where copper or silver is produced and sold as a primary product or a by-product.

Risks and Risk Management

Overview

The ability to deliver on our vision, strategic objectives and operating guidance depends on our ability to understand and appropriately respond to the uncertainties or “risks” we face that may prevent us from achieving our objectives. To achieve this, we:

- maintain a framework that permits us to manage risk effectively and in a manner that creates the greatest value;
- integrate a process for managing risk into all our important decision-making processes so that we reduce the effect of uncertainty on achieving our objectives;
- actively monitor key controls we rely on to achieve the Company’s objectives so they remain in place and are effective at all times; and
- provide assurance to senior management and relevant committees of the Board on the effectiveness of key control activities.

Board and Committee Oversight

We maintain strong risk oversight practices, with responsibilities outlined in the mandates of the Board and related committees. The Board’s mandate is clear on its responsibility for reviewing and discussing with management the processes used to assess and manage risk, including the identification by management of the principal risks of the business, and the implementation of appropriate systems to deal with such risks.

The Audit & Risk Committee assists the Board in overseeing the Company’s management of principal risks and the implementation of policies and standards for monitoring and modifying such risks, as well as monitoring and reviewing the Company’s financial position and financial risk management programs. The ESG & Nominating Committee assists the Board in overseeing the Company’s policies and performance for its environmental, health and safety, corporate social responsibility and human rights programs. The Compensation Committee assists the Board in ensuring that executive compensation is appropriately linked to our sustainability performance, including with respect to climate change and water.

Management Oversight

Our weekly Executive Committee Review is the main forum for senior management to raise and discuss risks facing the operations and organization more broadly. Additionally, our most senior management-level body dedicated to sustainability is the E&S Committee which meets on a quarterly basis to review sustainability performance and key performance indicators across our operations. At every quarterly meeting, the ESG & Nominating Committee and the Audit & Risk Committee are provided with updates on the key issues identified by management at these regular sessions.

Principal Risks

The following subsections describe some of our key sources of uncertainty and critical risk mitigation activities. The risks described below are not the only ones facing Barrick. Our business is subject to inherent risks in financial, regulatory, strategic and operational areas. For a more comprehensive discussion of those inherent risks, see “Risk Factors” in our most recent Form 40-F/Annual Information Form on file with the SEC and Canadian provincial securities regulatory authorities. Also see the “Cautionary Statement on Forward-Looking Information” on page 6 of this MD&A.

Risk Factor**Risk Mitigation Strategy**

Free cash flow⁶ and costs

Our ability to improve productivity, control operating costs and optimize working capital remains a focus in 2026 and is subject to several sources of uncertainty. This includes our ability to achieve and maintain industry-leading margins by improving the productivity and efficiency of our operations.

- Maximizing the benefit of higher gold prices through agile management and operational execution;
- Weekly Executive Committee Review to identify, assess and respond to risks in a timely manner;
- Enabling simplification and agile decision making through optimization of business systems;
- Supply Chain is decentralized to the operations with a centralized Strategic Sourcing Group and is focused on mitigating the risks of rising costs and supply chain disruption;
- Disciplined capital allocation criteria for all investments, to ensure a high degree of consistency and rigor is applied to all capital allocation decisions based on a comprehensive understanding of risk and reward;
- Continued enhancement and testing of controls to prevent, detect and respond to potential cyber-attacks; and
- A flat, operationally focused, agile management structure with an ownership culture.

Social license to operate

At Barrick, we are committed to building, operating and closing our mines in a safe and responsible manner. To do this, we seek to build trust-based partnerships with host governments and local communities to drive shared long-term value while working to minimize the social and environmental impacts of our activities. Geopolitical risks such as resource nationalism and incidents of corruption are inherent in the business of a company operating globally. Past environmental incidents in the extractive industry highlight the hazards (e.g., water management, tailings storage facilities, etc.) and the potential consequences to the environment, community health and safety. Our ability to maintain compliance with regulatory and community obligations in order to protect the environment and our host communities alike remains one of our top priorities. Barrick also recognizes climate change as an area of risk requiring specific focus and that reducing GHG emissions to counter the causes of climate change requires strong collective action by the mining industry.

- Our commitment to responsible mining is supported by a robust governance framework, including an overarching Sustainable Development Policy and related policies in the areas of Biodiversity, Conflict-Free Gold, Social Performance, Occupational Health and Safety, Environment and Human Rights;
- Use of our Sustainability Scorecard to track sustainability performance using key performance indicators aligned to priority areas set out in our strategy;
- Mandatory training on our Code of Business Conduct and Ethics as well as supporting policies which set out the ethical behavior expected of everyone working at, or with, Barrick;
- We take a partnership approach with our host governments. This means we work to balance our own interests and priorities with those of our government partners, working to ensure that everyone derives real value from our operations;
- Standalone, independent Human Rights Assessment Program whereby each site is assessed on a periodic cycle of two to three years, depending on the risk level and the number and level of identified risks to the rightsholder;
- Established CDCs at all our operating mines to identify community needs and priorities and to allocate funds to those initiatives most needed and desired by local stakeholders;
- We open our social and environmental performance to third-party scrutiny, including through the ISO 14001 re-certification process, International Cyanide Management Code audits and annual human rights impact assessments;
- We published further site-level TSF disclosures, in accordance with Principle 15 of the GISTM, and have worked diligently toward bringing inactive TSFs into Safe Closure on a priority basis;
- Our climate change strategy has three pillars: (1) identify, understand and mitigate the risks associated with climate change; (2) measure and reduce our impacts on climate change; and (3) improve our disclosure on climate change;
- We continuously monitor developments around the world and work closely with our local communities on managing the impacts of health issues, such as Ebola or Mpox outbreaks, on our people and business; and
- We continuously review and update our closure plans and cost estimates to plan for environmentally responsible closure and monitoring of operations.

<i>Risk Factor</i>	<i>Risk Mitigation Strategy</i>
<p><i>Resources and reserves and production outlook</i></p> <p>Like any mining company, we face the risk that we are unable to discover or acquire new resources or that we do not convert resources into production. As we move into 2026 and beyond, our overriding objective of growing free cash flow⁶ continues to be underpinned by a strong pipeline of organic projects and minesite expansion opportunities in our core regions. Uncertainty related to these and other opportunities exists (potentially both favorable and unfavorable) due to the speculative nature of mineral exploration and development, as well as the potential for increased costs, delays, suspensions and technical challenges associated with the construction of capital projects.</p>	<ul style="list-style-type: none"> • Focus on responsible mineral resource management, continuously improve ore body knowledge and add to reserves and resources; • Consolidate and secure dominant land positions in favored operating districts and emerging new prospective geological domains; • Focus on economically feasible discoveries with potential Tier One^{1,3} status; • Optimize the value of underdeveloped projects; • Establish and develop motivated and highly agile discovery-driven teams; • Identify emerging opportunities and secure them through earn-in agreements or acquisition; and • Regular review and management of capital projects at executive committee level.
<p><i>Financial position and liquidity</i></p> <p>Our liquidity profile, level of indebtedness and credit ratings are all factors in our ability to meet short- and long-term financial demands. Barrick's outstanding debt balances impact liquidity through scheduled interest and principal repayments and the results of leverage ratio calculations, which could influence our investment grade credit ratings and ability to access capital markets. In addition, our ability to draw on our credit facility is subject to meeting its covenants. Our primary source of liquidity is our operating cash flow, which is dependent on the ability of our operations to deliver projected future cash flows. The ability of our operations to deliver projected future cash flows, as well as future changes in gold and copper market prices, either favorable or unfavorable, will continue to have a material impact on our cash flow and liquidity.</p>	<ul style="list-style-type: none"> • Continued focus on generating positive free cash flow⁶ by improving the underlying cost structures of our operations in a sustainable manner; • Preparation of budgets and forecasts to understand the impact of different price scenarios on liquidity, including our capacity to provide cash returns to shareholders, repurchase outstanding debt and shares, and formulate appropriate strategies; • Review of debt and net debt levels to ensure appropriate leverage and monitor the market for liability management opportunities; and • Other options available to the Company to enhance liquidity include drawing on our \$3.0 billion undrawn Credit Facility, asset sales, joint ventures or the issuance of debt or equity securities.

OPERATING PERFORMANCE

Our presentation of reportable operating segments consists of eight gold mines (Carlin, Cortez, Turquoise Ridge, Pueblo Viejo, Loulo-Goukoto, Kibali, North Mara and Bulyanhulu) and one copper mine (Lumwana). Starting with the Q2 2025 MD&A, the discussion on Loulo-Goukoto is presented in the "Other Mines – Gold" section as no operating data or per ounce data was provided for Q1 2025 to Q3 2025 as a result of the temporary suspension of operations starting January 14, 2025, and subsequent loss of control on June 16, 2025. On November 24, 2025, Barrick announced that an agreement had been entered into with the Government of the Republic of Mali to put an end

to all disputes regarding the Loulo and Goukoto mines. The provisional administration of the Loulo-Goukoto complex was terminated on December 16, 2025, at which point operational control was handed back to Somilo and Goukoto's management. The remaining operating segments, including our remaining gold and copper mines, have been grouped into an "Other Mines" category and will not be reported on individually. Segment performance is evaluated based on a number of measures including operating income before tax, production levels and unit production costs. Certain costs are managed on a consolidated basis and are therefore not reflected in segment income.

Nevada Gold Mines (61.5% basis)^a, Nevada USA
Summary of Operating and Financial Data

a. Barrick is the operator of NGM and owns 61.5%, with Newmont Corporation owning the remaining 38.5%. NGM is accounted for as a subsidiary with a 38.5% non-controlling interest. These results represent our 61.5% interest in Carlin, Cortez, Turquoise Ridge, Phoenix and Long Canyon until it transitioned to care and maintenance at the end of 2023, as previously reported.

b. Excludes the Gold Quarry (Mill 5) concentrator (decommissioned at the end of Q1 2023).

c. Further information on these non-GAAP financial measures, including detailed reconciliations, is included on pages 54 to 67 of this MD&A.

d. EBITDA represents income less depreciation. Depreciation expense is \$203 million and \$568 million for Q4 2025 and 2025, respectively (Q3 2025: \$134 million, 2024: \$503 million, 2023: \$591 million).

e. Represents EBITDA divided by revenue.

f. Includes capitalized interest.

g. Includes amounts spent on the NGM TS Solar project.

NGM includes Carlin, Cortez, Turquoise Ridge, Phoenix and non-mine site related activity such as the TS Solar Project. Barrick is the operator of the joint venture and owns 61.5%, with Newmont owning the remaining 38.5%. Refer to pages 25 to 31 and 38 for a detailed discussion of each minesite's results.

Financial Results

Q4 2025 compared to Q3 2025

Gold production in Q4 2025 was 25% higher compared to Q3 2025 primarily due to higher throughput and grades processed at both the roasters and the autoclave. Higher grades processed were driven by access opening up to mine higher grade ore in the South Arturo pit, in line with the mine plan. Autoclave throughput increased following the completion of the shutdown during Q3 2025 and both roasters performed better on throughput and runtime in Q4 2025 driven by reliability improvements.

COS/oz⁷ and TCC/oz⁶ in Q4 2025 were 25% and 15% higher, respectively, compared to Q3 2025 due to increased sulfuric acid consumption due to changes in ore feed composition. This was compounded by sulfur and sulfuric acid pricing pressures, the impacts of tariffs on other key consumables as well as higher royalties from the higher realized gold price⁶. COS/oz⁷ was further impacted by higher depreciation expense which relates to ore sourced from South Arturo. In Q4 2025, AISC/oz⁶ was 5% higher compared to Q3 2025, mainly due to higher TCC/oz⁶, partially offset by lower minesite sustaining capital expenditures⁶ on a per ounce basis.

Capital expenditures in Q4 2025 were in line with Q3 2025, as higher capitalized stripping was offset by lower underground development, in line with the mine plan.

2025 compared to 2024

Gold production in 2025 was 11% lower compared to 2024, mainly due to lower underground grades mined. A secondary impact of this was more of the higher grade Cortez refractory ore was processed at the Carlin roasters compared to 2024. This displacement of lower grade Carlin feed ensured that overall production for NGM was maximized. Heap leach production was also lower for 2025 owing to the leach cycle with minimal tonnes placed on leach pads in 2024 and 2025. Leach placement is expected to increase once the Gold Quarry pit is back mining in ore (expected in 2027).

COS/oz⁷ and TCC/oz⁶ for 2025 were 17% and 13% higher, respectively, than 2024, primarily due to the lower production (resulting in lower fixed cost dilution), combined with higher royalties from the higher realized gold price⁶. In addition, processing costs were higher, driven by higher sulfur pricing in 2025, combined with higher consumable prices as the impact of tariffs started to be realized in Q4 2025, specifically on steel products. For 2025, AISC/oz⁶ was 10% higher than 2024, due to the impact of higher TCC/oz⁶, and slightly higher minesite sustaining capital expenditures⁶ on a per ounce basis.

Capital expenditures in 2025 were in line with 2024 as higher project capital expenditures⁶ (related to the ramp-up of the Ren project in 2025), were offset by lower minesite sustaining capital expenditures⁶ following the completion of the Komatsu-930 truck fleet replacement project in 2024.

2025 compared to Guidance

	2025 Actual	2025 Guidance
Gold produced (000s oz)	687	705 – 785
Cost of sales ⁷ (\$/oz)	1,676	1,470 – 1,570
Total cash costs ⁶ (\$/oz)	1,340	1,140 – 1,220
All-in sustaining costs ⁶ (\$/oz)	1,906	1,630 – 1,730

Gold production for 2025 was below the guidance range, as previously disclosed, primarily due to a slower than planned ramp-up of the Gold Quarry roaster and delayed access to higher grade underground zones due to poor ground conditions. This was further impacted by an increase in higher grade ore shipped from Cortez and processed at the Carlin roasters, to the overall benefit of NGM. COS/oz⁷ and TCC/oz⁶ were both above the guidance ranges mainly due to the impact of lower production, combined with increased sulfuric acid consumption and pricing, and higher consumable prices partially driven by the impact of tariffs. AISC/oz⁶ was also higher than guidance, mainly driven by higher TCC/oz⁶. All cost metrics were also impacted by higher royalties from the higher realized gold price⁶. Our cost guidance for 2025 was based on a gold price assumption of \$2,400/oz. Given the actual realized gold price⁶ was considerably higher at \$3,501/oz, the cost guidance ranges for Carlin need to be increased by \$40/oz to provide a more meaningful comparison. After adjusting for the realized gold price⁶, the guidance ranges are as follows: COS/oz⁷ of \$1,510 to \$1,610, TCC/oz⁶ of \$1,180 to \$1,260 and AISC/oz⁶ of \$1,670 to \$1,770. The actual cost metrics for 2025 were higher than the price adjusted ranges due to the lower than planned production as explained above.

Financial Results

Q4 2025 compared to Q3 2025

Gold production in Q4 2025 was 5% higher compared to Q3 2025. This was mainly driven by higher ore tonnes from both Cortez Pits and Goldrush transported and processed at the Carlin roasters, combined with higher grades from Cortez Hills underground, partially offset by lower grades from the open pits.

COS/oz⁷ and TCC/oz⁶ in Q4 2025 were 1% and 4% lower, respectively, than Q3 2025, driven by the increased production and favorable leach tonne placement driven by higher open pit ore tonnes, partially offset by higher royalties from the higher realized gold price⁶. In Q4 2025, AISC/oz⁶ were 2% lower than Q3 2025, mainly due to lower TCC/oz⁶, partially offset by higher minesite sustaining capital expenditures⁶.

Capital expenditures in Q4 2025 were 14% higher compared to Q3 2025, mainly due to higher minesite sustaining capital expenditures⁶ driven by increased capitalized waste stripping and fleet replacements in both the open pit and underground operations.

2025 compared to 2024

Gold production in 2025 was 2% higher than 2024 primarily due to higher refractory ore shipped and processed at the Carlin roasters driven by productivity improvements in the Cortez Hills underground, the ramp-up of Goldrush and higher proportions of refractory ore mined from Cortez Pits. The other consequence of higher refractory material sourced from the open pits was lower oxide ore tonnes and grades through the oxide mill which were the main drivers of the lower oxide mill production. Finally, leach ounces were lower compared to the prior year. Although ore stacked was higher, given close to half of the tonnes were placed in Q4 and with the longer processing cycle time, the gold will be realized across 2025 and 2026.

COS/oz⁷ and TCC/oz⁶ in 2025 were 15% and 18% higher, respectively, than 2024, reflecting a higher proportion of higher cost refractory ounces processed at the Carlin roasters in the sales mix and higher royalties from the higher realized gold price⁶. For 2025, AISC/oz⁶ increased by 5% compared to 2024, driven by higher TCC/oz⁶, partially offset by lower minesite sustaining capital expenditures⁶.

Capital expenditures in 2025 increased by 2% compared to 2024, due to increased project capital expenditures⁶ resulting from higher development and infrastructure spend at Goldrush and the successful initiation of the autonomous haul project during the year. This was partially offset by lower minesite sustaining capital expenditures⁶ following the investment in the Komatsu 930-E truck fleet which spanned both 2023 and 2024 and lower capitalized waste stripping at Crossroads following the completion of Crossroads Phase 6 stripping in Q2 2025.

2025 compared to Guidance

	2025 Actual	2025 Guidance
Gold produced (000s oz)	454	420 – 470
Cost of sales ⁷ (\$/oz)	1,609	1,420 – 1,520
Total cash costs ⁶ (\$/oz)	1,234	1,050 – 1,130
All-in sustaining costs ⁶ (\$/oz)	1,513	1,370 – 1,470

Gold production for 2025 was in the top half of the guidance range, primarily due to higher than planned refractory ore shipped and processed at the Carlin roasters and the Goldstrike autoclave, to the overall benefit of NGM. COS/oz⁷ and TCC/oz⁶ were above the original guidance range reflecting a higher than planned proportion of higher cost refractory ounces processed at the Carlin roasters in the sales mix combined with higher sulfur and other consumable prices, partially driven by tariffs. All cost metrics were also impacted by higher royalties from the higher realized gold price⁶. Our cost guidance for 2025 was based on a gold price assumption of \$2,400/oz. Given the actual realized gold price⁶ was considerably higher at \$3,501/oz, the cost guidance ranges for Cortez need to be increased by \$55/oz to provide a more meaningful comparison. After adjusting for the realized gold price⁶, the guidance ranges are as follows: COS/oz⁷ of \$1,475 to \$1,575, TCC/oz⁶ of \$1,105 to \$1,185 and AISC/oz⁶ of \$1,425 to \$1,525. AISC/oz⁶ was within the price adjusted guidance range as the higher TCC/oz⁶ was partially offset by lower than planned capitalized waste stripping at Crossroads following the reclassification of waste material to low grade ore.

Financial Results

Q4 2025 compared to Q3 2025

Gold production in Q4 2025 was 22% higher than Q3 2025, mainly due to higher grades from the undergrounds as per the mine plan resulting in 34% higher processed grades combined with 2% higher underground tonnes mined owing to improved mining efficiencies.

COS/oz⁷ and TCC/oz⁶ in Q4 2025 were 2% and 4% lower, respectively, than Q3 2025, primarily due to higher throughput and grades, partially offset by higher maintenance costs due to a major planned shutdown at the autoclave occurring in the quarter. AISC/oz⁶ was 2% lower than Q3 2025, mainly reflecting lower TCC/oz⁶, partially offset by higher minesite sustaining capital expenditures⁶.

Capital expenditures in Q4 2025 were 36% higher than Q3 2025 mainly due to the boiler replacement and other capital works during the planned shutdown, combined with higher TSF spend with the commencement of phase 1 of the Sage TSF expansion during 2025.

2025 compared to 2024

Gold production in 2025 was 12% higher compared to 2024, primarily due to 5% higher underground tonnes mined owing to improved mining efficiencies and 10% higher tonnes processed through the autoclave following the reinvestment in the facility over the last two years to increase overall reliability and throughput.

COS/oz⁷ and TCC/oz⁶ in 2025 were 4% and 5% lower, respectively, than 2024, mainly due to higher production and lower unit rates in both the underground and the autoclave driven by improved efficiencies and an overall reduction in contractor spend and unplanned maintenance events. This was partially offset by higher royalties from the higher realized gold price⁶. AISC/oz⁶ decreased by 7% compared to 2024 due to lower TCC/oz⁶, combined with lower minesite sustaining capital expenditures⁶ driven by lower plant remedial costs required following the investment in 2024.

2025 compared to Guidance

	2025 Actual	2025 Guidance
Gold produced (000s oz)	341	310 – 345
Cost of sales ⁷ (\$/oz)	1,545	1,370 – 1,470
Total cash costs ⁶ (\$/oz)	1,178	1,000 – 1,080
All-in sustaining costs ⁶ (\$/oz)	1,358	1,260 – 1,360

Gold production in 2025 was at the top end of the guidance range as the improvements in stabilizing the processing plant and improved mining efficiencies resulted in a strong H2 performance. COS/oz⁷ and TCC/oz⁶ were higher than the original guidance mainly due to a change in the mine plan which involved higher operating development costs combined with higher input prices relating to reagents and consumables, partially driven by tariffs, and higher than planned maintenance costs. AISC/oz⁶ was within guidance as the impact of the change in the mine plan was not a driver (higher operating costs were offset by lower minesite sustaining capital expenditures⁶). All cost metrics were also impacted by higher royalties from the higher realized gold price⁶. Our cost guidance for 2025 was based on a gold price assumption of \$2,400/oz. Given the actual realized gold price⁶ was considerably higher at \$3,501/oz, the cost guidance ranges for Turquoise Ridge need to be increased by \$15/oz to provide a more meaningful comparison. After adjusting for the realized gold price⁶, the guidance ranges are as follows: COS/oz⁷ of \$1,385 to \$1,485, TCC/oz⁶ of \$1,015 to \$1,095 and AISC/oz⁶ of \$1,275 to \$1,375.

Financial Results

Q4 2025 compared to Q3 2025

Gold production for Q4 2025 was 4% lower than Q3 2025 due to lower recoveries stemming from lagging recovery performance of historically stockpiled material in the flotation-, autoclave- and CIL circuits. Lower recoveries were partially offset by higher throughput quarter-on-quarter.

COS/oz⁷ for Q4 2025 was 3% higher than Q3 2025 mainly due to higher depreciation expense, while TCC/oz⁶ remained consistent with Q3 2025 as lower fixed plant maintenance costs were offset by higher royalties from the higher realized gold price⁶. For Q4 2025, AISC/oz⁶ was 10% higher than Q3 2025, mainly reflecting higher minesite sustaining capital expenditures⁶.

Capital expenditures for Q4 2025 increased by 53% compared to Q3 2025 due to higher minesite sustaining capital expenditures⁶ associated with restoring fleet reliability and increased activities at the Llagal TSF, and higher project capital expenditures on the Naranjo TSF.

2025 compared to 2024

Gold production for 2025 was 8% higher than 2024, mainly due to higher throughput resulting from the plant expansion (+12% year on year), partially offset by lower recoveries due to increased utilization of the expansion flotation circuit and lower recoveries from stockpile material, resulting in higher ounce production.

COS/oz⁷ and TCC/oz⁶ for 2025 increased by 2% and 3%, respectively, compared to 2024, primarily due to higher diesel and electricity consumption, higher plant maintenance costs and higher royalties from the higher realized gold price⁶. This was partially offset by the benefit of greater fixed cost dilution with the increase in throughput and lower mining costs. For 2025, AISC/oz⁶ increased by 7% compared to 2024, mainly reflecting both higher minesite sustaining capital expenditures⁶ and TCC/oz⁶.

Capital expenditures for 2025 increased by 13% compared to 2024, mainly due to higher minesite sustaining capital expenditures⁶ relating to plant and mining fleet component replacements, as well as increased project capital expenditures⁶ relating to the mine life extension project. Refer to the Future Growth section on page 42 for more details.

2025 compared to Guidance

	2025 Actual	2025 Guidance
Gold produced (000s oz)	379	370 – 410
Cost of sales ⁷ (\$/oz)	1,608	1,540 – 1,640
Total cash costs ⁶ (\$/oz)	1,034	910 – 990
All-in sustaining costs ⁶ (\$/oz)	1,412	1,280 – 1,380

Gold production in 2025 was in the lower half of the guidance range mainly due to lower CIL recovery resulting from higher than planned copper and preg-robbing ores in the feed blend, partially offset by higher grades processed. COS/oz⁷ was within the guidance range as the increase in TCC/oz⁶ was partially offset by lower depreciation expense. TCC/oz⁶ was higher than the guidance range mainly due to higher processing maintenance costs. All cost metrics were also impacted by higher royalties from the higher realized gold price⁶. Our cost guidance for 2025 was based on a gold price assumption of \$2,400/oz. Given the actual realized gold price⁶ was considerably higher at \$3,501/oz, the cost guidance ranges for Pueblo Viejo need to be increased by \$40/oz to provide a more meaningful comparison. After adjusting for the realized gold price⁶, the guidance ranges are as follows: COS/oz⁷ of \$1,580 to \$1,680, TCC/oz⁶ of \$950 to \$1,030 and AISC/oz⁶ of \$1,320 to \$1,420. After adjusting for the gold price, AISC/oz⁶ was within the guidance range.

Kibali (45% basis)^a, Democratic Republic of the Congo

a. Barrick owns 45% of Kibali Goldmines SA with the Government of Democratic Republic of the Congo and our joint venture partner, AngloGold Ashanti, owning 10% and 45%, respectively. The figures presented in this table and the discussion that follows are based on our 45% effective interest in Kibali Goldmines SA held through our 50% interest in Kibali (Jersey) Limited and its other subsidiaries (collectively "Kibali"), inclusive of the impact of the purchase price allocation resulting from the merger with Randgold. Kibali is accounted for as an equity method investment on the basis that the joint venture partners that have joint control have rights to the net assets of the joint venture.

b. Further information on these non-GAAP financial measures, including detailed reconciliations, is included on pages 54 to 67 of this MD&A.

c. EBITDA represents income less depreciation. Depreciation expense is \$36 million and \$138 million for Q4 2025 and 2025, respectively (Q3 2025: \$38 million, 2024: \$134 million, 2023: \$147 million).

d. Represents EBITDA divided by revenue.

Class 1 ⁹ environmental incidents	0	0	0	0

On December 15, 2025, a tragic incident at the Kibali underground operations resulted in the fatality of an employee. Please refer to page 18 for further details.

Financial Results

Q4 2025 compared to Q3 2025

Gold production for Q4 2025 was 8% lower than Q3 2025, primarily due to lower grades processed linked to lower tonnes mined from the underground. Lower underground tonnes to surface was linked to unplanned shaft maintenance and an extended stoppage due to the tragic fatality.

COS/oz⁷ and TCC/oz⁶ for Q4 2025 were 5% and 7% higher, respectively, than Q3 2025 mainly due to lower grades processed, higher mining unit costs and higher royalties from the higher realized gold price⁶. AISC/oz⁶ for Q4 2025 was 7% higher than in Q3 2025 resulting from both higher TCC/oz⁶ and minesite capital expenditures⁶ on a per ounce basis.

Capital expenditures in Q4 2025 remained flat compared to Q3 2025 as higher capitalized waste stripping was offset by the late arrival of underground infrastructure components and a delay in the river diversion construction at the Kalimva open pit.

2025 compared to 2024

Gold production in 2025 was 2% lower compared to 2024, mainly due to lower throughput and slightly lower grades processed.

COS/oz⁷ and TCC/oz⁶ in 2025 increased by 17% and 21%, respectively, compared to 2024, mainly due to lower grades processed as well as higher royalties driven by the higher realized gold price⁶. For 2025, AISC/oz⁶ was 19% higher compared to 2024, reflecting both higher TCC/oz⁶ and minesite sustaining capital expenditures⁶.

Capital expenditures in 2025 were 21% higher compared to 2024 due to higher project capital expenditures⁶ linked to the Pamao in-pit TSF and additional drilling on the ARK project. Higher minesite sustaining capital expenditures⁶ were driven by higher capitalized waste stripping and additional spend on underground equipment.

2025 compared to Guidance

	2025 Actual	2025 Guidance
Gold produced (000s oz)	303	310 – 340
Cost of sales ⁷ (\$/oz)	1,568	1,280 – 1,380
Total cash costs ⁶ (\$/oz)	1,099	940 – 1,020
All-in sustaining costs ⁶ (\$/oz)	1,337	1,130 – 1,230

Gold production in 2025 ended marginally below the guidance range, primarily driven by lower grades processed than planned. All cost metrics were above the guidance ranges primarily as a result of the lower than planned production and were also impacted by higher royalties from the higher realized gold price⁶. Our cost guidance for 2025 was based on a gold price assumption of \$2,400/oz. Given the actual realized gold price⁶ was considerably higher at \$3,501/oz, the cost guidance ranges for Kibali need to be increased by \$65/oz to provide a more meaningful comparison. After adjusting for the realized gold price⁶, the guidance ranges are as follows: COS/oz⁷ of \$1,345 to \$1,445, TCC/oz⁶ of \$1,005 to \$1,085 and AISC/oz⁶ of \$1,195 to \$1,295.

North Mara (84% basis)^a, Tanzania

LTIFR ⁸	0.00	0.00	0.00	0.00
TRIFR ⁸	0.32	0.00	0.32	0.35
Class 1 ⁹ environmental incidents	0	0	0	0

Financial Results

Q4 2025 compared to Q3 2025

In Q4 2025, gold production was 13% lower than Q3 2025 mainly due to lower throughput and lower grades, slightly offset by higher recovery.

COS/oz⁷ and TCC/oz⁶ in Q4 2025 were 10% and 16% higher, respectively, than Q3 2025, resulting from lower grades processed, higher underground mining costs, and increased royalties from the higher realized gold price⁶. AISC/oz⁶ in Q4 2025 was 22% higher than Q3 2025, reflecting both higher TCC/oz⁶ and minesite sustaining capital expenditures⁶.

Capital expenditures in Q4 2025 increased by 37% compared to Q3 2025, driven by higher project capital expenditures⁶ mainly related to the new underground decline. This was combined with higher minesite sustaining capital expenditures⁶ due to higher spend on the purchase of underground loaders in line with our fleet replacement schedule, and a new Battery Energy Storage System to further optimize the power supply and cost base.

2025 compared to 2024

In 2025, gold production was 6% lower than 2024 due to lower grades processed from the underground and slightly lower recovery, as per the mine plan.

COS/oz⁷ and TCC/oz⁶ in 2025 were 14% and 10% higher, respectively, than 2024, mainly reflecting higher royalties from the higher realized gold price⁶ and the impact of lower grades processed. AISC/oz⁶ was 5% higher than 2024, primarily due to higher TCC/oz⁶, partially offset by lower minesite sustaining capital expenditures⁵.

In 2025, capital expenditures increased by 28% compared to 2024 driven by higher project capital expenditures⁶ mainly due to the completion of the paste plant and Gokona pre-stripping cutback, partially offset by lower minesite sustaining capital expenditures⁶, reflecting lower capitalized waste stripping.

2025 compared to Guidance

	2025 Actual	2025 Guidance
Gold produced (000s oz)	249	230 – 260
Cost of sales ⁷ (\$/oz)	1,449	1,370 – 1,470
Total cash costs ⁶ (\$/oz)	1,085	1,020 – 1,100
All-in sustaining costs ⁶ (\$/oz)	1,333	1,400 – 1,500

Gold production in 2025 ended in the upper half of the guidance range, reflecting the successful delivery of the mine plan committed to at the start of the year. All cost metrics were within the original guidance ranges, notwithstanding being impacted by higher royalties from the higher realized gold price⁶. Our cost guidance for 2025 was based on a gold price assumption of \$2,400/oz. Given the actual realized gold price⁶ was considerably higher at \$3,501/oz, the cost guidance ranges for North Mara need to be increased by \$85/oz to provide a more meaningful comparison. After adjusting for the realized gold price⁶, the guidance ranges are as follows: COS/oz⁷ of \$1,455 to \$1,555, TCC/oz⁶ of \$1,105 to \$1,185 and AISC/oz⁶ of \$1,485 to \$1,585. On this basis, North Mara delivered lower costs than guidance.

Bulyanhulu (84% basis)^a, Tanzania

Class 1 ⁹ environmental incidents	0	0	0	0

On October 21, 2025, a fatal incident occurred in the underground operations resulting in the loss of an employee. Please refer to page 18 for further details.

Financial Results

Q4 2025 compared to Q3 2025

In Q4 2025, gold production was 5% higher than Q3 2025, primarily reflecting higher grades processed and higher recovery, slightly offset by lower throughput.

COS/oz⁷ in Q4 2025 increased by 4%, due to higher depreciation expense, partially offset by lower TCC/oz⁶. TCC/oz⁶ was 5% lower primarily due to higher grades processed, slightly offset by higher royalties from the higher realized gold price⁶. AISC/oz⁶ in Q4 2025 was 5% lower than Q3 2025, mainly as a result of lower TCC/oz⁶ and lower minesite sustaining capital expenditures⁶.

Capital expenditures in Q4 2025 were 28% higher than Q3 2025, mainly due to higher project capital expenditures⁶ relating to the Upper West decline.

2025 compared to 2024

In 2025, gold production was 9% lower than 2024 as we mined in lower grade areas of the mine and continued to prioritize underground development in higher grade zones, partially offset by higher recovery.

COS/oz⁷ and TCC/oz⁶ in 2025 were 19% and 17% higher, respectively, than 2024, reflecting higher royalties from the higher realized gold price⁶, combined with lower grades processed and higher mining costs driven by higher labour and power costs as we go deeper in the mine. AISC/oz⁶ was 26% higher than 2024 due to both increased TCC/oz⁶ and minesite sustaining capital expenditures⁶.

In 2025, capital expenditures increased by 26% compared to 2024, reflecting higher minesite sustaining capital expenditures⁶ related to a significant step up in underground development, combined with increased project capital expenditures⁶ mainly due to the Upper West decline.

2025 compared to Guidance

	2025 Actual	2025 Guidance
Gold produced (000s oz)	153	150 – 180
Cost of sales ⁷ (\$/oz)	1,789	1,470 – 1,570
Total cash costs ⁶ (\$/oz)	1,253	1,010 – 1,090
All-in sustaining costs ⁶ (\$/oz)	1,795	1,540 – 1,640

Gold production in 2025 ended within the guidance range, albeit closer to the low end of the range. All cost metrics ended above the cost guidance mainly driven by higher royalties from the higher realized gold price⁶ and lower grades mined and processed. Our cost guidance for 2025 was based on a gold price assumption of \$2,400/oz. Given the actual realized gold price⁶ was considerably higher at \$3,501/oz, the cost guidance ranges for Bulyanhulu need to be increased by \$85/oz to provide a more meaningful comparison. After adjusting for the realized gold price⁶, the guidance ranges are as follows: COS/oz⁷ of \$1,555 to \$1,655, TCC/oz⁶ of \$1,095 to \$1,175 and AISC/oz⁶ of \$1,625 to \$1,725. The actual cost metrics for 2025 were higher than the price adjusted ranges due to the lower than planned production as explained above.

a. Further information on these non-GAAP financial measures, including detailed reconciliations, is included on pages 54 to 67 of this MD&A.

b. Includes both minesite sustaining and project capital expenditures. Further information on these non-GAAP financial measures, including detailed reconciliations, is included on pages 54 to 67 of this MD&A.

c. On October 6, 2025, we reached an agreement to sell our interest in the Tongon gold mine and certain of its exploration properties to the Atlantic Group for total consideration of up to \$305 million. The transaction closed on December 1, 2025. Accordingly, operating and financial results provided are up to the closing date, and no commentary for Q4 2025 was provided.

d. On September 10, 2025, we reached an agreement to sell the Hemlo gold mine to Carcetti Capital Corp. for gross proceeds of up to \$1.09 billion. The transaction closed on November 26, 2025. Accordingly, operating and financial results provided are up to the closing date, and no commentary for Q4 2025 was provided.

e. As a result of temporary suspension of operations at Loulo-Goukoto starting January 14, 2025, and subsequent loss of control on June 16, 2025, no operating data or per ounce data was provided for Q1 2025 to Q3 2025. On November 24, 2025, Barrick announced that an agreement had been entered into with the Government of the Republic of Mali to put an end to all disputes regarding the Loulo and Goukoto mines. The provisional administration of the Loulo-Goukoto complex was terminated on December 16, 2025, at which point operational control was handed back to Somilo and Goukoto's management.

Phoenix (61.5%)

Gold production for Phoenix in Q4 2025 was 11% lower than Q3 2025 owing to lower recoveries related to geochemistry following the increased material mined from Fortitude during Q4 2025.

COS/oz⁷ and TCC/oz⁶ in Q4 2025 were 2% and 81% lower, respectively, than Q3 2025. The improvement in COS/oz⁷ was mainly due to improved mining efficiencies. In addition to this, TCC/oz⁶ was significantly impacted by higher copper and silver by-product cost allocations. In Q4 2025, AISC/oz⁶ decreased by 70% compared to Q3 2025, due to lower TCC/oz⁶ and lower minesite sustaining capital expenditures⁶.

	2025 Actual	2025 Guidance
Gold produced (000s oz)	109	85 – 105
Cost of sales ⁷ (\$/oz)	1,921	2,070 – 2,170
Total cash costs ⁶ (\$/oz)	653	890 – 970
All-in sustaining costs ⁶ (\$/oz)	920	1,240 – 1,340

Compared to our 2025 outlook, gold production exceeded guidance, driven by improved grades and recovery. COS/oz⁷, TCC/oz⁶ and AISC/oz⁶ were below the guidance ranges driven mainly by higher than expected by-product cost allocations.

Veladero (50%), Argentina

Gold production for Veladero in Q4 2025 was 2% lower than Q3 2025 driven by a decrease in recoverable ounces placed on the leach pad due to the planned mine sequence. COS/oz⁷ and TCC/oz⁶ in Q4 2025 were both 13% higher, mainly due to higher shovel maintenance costs and the impact of higher royalties from the higher realized gold price⁶. In Q4 2025, AISC/oz⁶ increased by 28% compared to Q3 2025, due to both higher minesite sustaining capital expenditures⁶ and TCC/oz⁶.

	2025 Actual	2025 Guidance
Gold produced (000s oz)	230	190 – 220
Cost of sales ⁷ (\$/oz)	1,286	1,390 – 1,490
Total cash costs ⁶ (\$/oz)	785	890 – 970
All-in sustaining costs ⁶ (\$/oz)	1,450	1,570 – 1,670

Gold production for the full year 2025 was above the guidance range driven by additional recoverable ounces placed and higher ounces contributed by phase 1-5 of the leach facility. All cost metrics were below the guidance ranges as a result of the higher production, notwithstanding the impact of higher royalties from the higher realized gold price⁶.

Porgera (24.5%), Papua New Guinea

Gold production in Q4 2025 was in line with Q3 2025. COS/oz⁷ was 1% higher than Q3 2025 due to increased depreciation, partially offset by lower TCC/oz⁶. TCC/oz⁶ was 2% lower due to lower processing and underground mining cost. AISC/oz⁶ increased by 17% compared to Q3 2025 reflecting higher minesite sustaining capital expenditures⁶, slightly offset by lower TCC/oz⁶.

	2025 Actual	2025 Guidance
Gold produced (000s oz)	92	70 – 95
Cost of sales ⁷ (\$/oz)	1,553	1,510 – 1,610
Total cash costs ⁶ (\$/oz)	1,184	1,210 – 1,290
All-in sustaining costs ⁶ (\$/oz)	1,630	1,770 – 1,870

Gold production in 2025 was at the higher end of the guidance range. COS/oz⁷ was within the guidance range. TCC/oz⁶ and AISC/oz⁶ were lower than the guidance ranges mainly driven by the higher production, notwithstanding the impact of higher royalties from the higher realized gold price⁶.

Loulo-Gounkoto (80%), Mali

On January 14, 2025, Loulo-Gounkoto temporarily suspended operations following an ongoing dispute over the existing mining Conventions. On June 16, 2025 the Bamako Commercial Tribunal placed Loulo-Gounkoto under a temporary provisional administration. While Barrick retained its 80% legal ownership of the mine, operational

control was transferred to an external administrator. As a result of this loss of control event, in Q2 2025 the assets, liabilities and non-controlling interest of Loulo-Gounkoto were deconsolidated and derecognized and an investment recognized at fair value. On November 24, 2025, Barrick announced that an agreement had been entered into with the Government of the Republic of Mali to put an end to all disputes regarding the Loulo and Gounkoto mines. The provisional administration of the Loulo-Gounkoto complex was terminated on December 16, 2025, at which point operational control was handed back to Somilo and Gounkoto's management. This was accounted for as a business acquisition in Q4 2025 where the investment was derecognized and the assets, liabilities and non-controlling interest of Loulo-Gounkoto were consolidated from this date again. Refer to notes 4, 35 and 36 of the Financial Statements for further information.

During 2025, Loulo-Gounkoto produced 18 thousand ounces of gold in early January before operations were suspended and 11 thousand ounces of gold in December after the provisional administration was terminated and operations restarted under Barrick control. This brings full year production to 29 thousand ounces and full year sales to 91 thousand ounces (this includes the sale of the gold that was produced in late 2024 that was subject to an attachment order issued on January 2, 2025 and returned to the mine following the end of the provisional administration period). COS/oz⁷ for Q4 2025 and 2025 were \$4,151 and \$4,271, respectively, as it includes the impact of the fair value increment on inventory resulting from the purchase price allocation when we regained control of the mine. TCC/oz⁶ and AISC/oz⁶, which excludes the impact of the fair value increment of \$2,486/oz, were both \$1,448 for Q4 2025 and \$1,449 and \$1,603 for 2025, respectively.

Lumwana (100%), Zambia

Summary of Operating and Financial Data

Financial Results

Q4 2025 compared to Q3 2025

Copper production in Q4 2025 was 11% higher than Q3 2025 primarily due to higher throughput, partially offset by slightly lower grades processed and recoveries.

COS/lb⁷ and C1 cash costs/lb⁶ were 19% and 17% higher, respectively, than Q3 2025 primarily due to higher mining maintenance costs due to lower fleet availabilities from premature failures as well as higher power costs. In Q4 2025, AISC/lb⁶ increased by 11% compared to Q3 2025, primarily driven by the higher C1 cash costs/lb⁶ mentioned above, as well as higher minesite sustaining capital expenditures⁶, partially offset by the increase in sales volumes.

Capital expenditures were 34% higher compared to Q3 2025 due to an increase in both project and minesite capital expenditures⁶. Project capital expenditures⁶ increased by 45% primarily reflecting down payments on the mobile fleet as well as payments on awarded civil engineering and procurement packages for the Lumwana Super Pit Expansion project. The increase in minesite sustaining capital expenditures⁶ of 18% was primarily related to rebuilds.

Other Mines – Copper

2025 compared to 2024

In 2025, copper production increased by 23% compared to 2024, primarily due to higher grades processed and higher recoveries. Production of 151kt represents Lumwana's highest ever annual production in the mine's history.

In 2025, COS/lb⁷ and C1 cash costs/lb⁶ were 14% and 17% lower, respectively, than 2024 due to higher grades processed and higher capitalized waste stripping. AISC/lb⁶ in 2025 decreased by 21% compared to 2024, mainly due to both lower minesite sustaining capital expenditures⁶ and C1 cash costs/lb⁶.

In 2025, capital expenditures increased by 47% compared to 2024 due to higher project capital expenditures⁶ on the Super Pit Expansion project, as it entered into its first full year of execution. This is expected to further increase as we advance through 2026 with higher anticipated spend as more packages are executed and the fleet readiness continues to grow. Refer to the Future Growth section on page 43 for more details.

2025 compared to Guidance

	2025 Actual	2025 Guidance
Copper produced (M lbs)	151	125 – 155
Cost of sales ⁷ (\$/lb)	2.54	2.30 – 2.60
C1 cash costs ⁶ (\$/lb)	1.86	1.60 – 1.90
All-in sustaining costs ⁶ (\$/lb)	3.05	2.80 – 3.10

Copper production in 2025 ended at the top end of the guidance range. All cost metrics were also within guidance ranges despite higher power costs as the mine continues to drive cost-effective delivery of its mine plan.

Zaldívar (50% basis), Chile

Copper production for Zaldívar in Q4 2025 was 33% higher than Q3 2025 driven by higher grades processed. COS/lb⁷ and C1 cash costs/lb⁶ in Q4 2025 were 26% and 36% higher, respectively, than Q3 2025 driven by an inventory write-down in Q4. AISC/lb⁶ was in line with Q3 2025.

	2025 Actual	2025 Guidance
Copper produced (kt)	37	40 – 45
Cost of sales ⁷ (\$/lb)	5.14	3.60 – 3.90
C1 cash costs ⁶ (\$/lb)	3.98	2.70 – 3.00
All-in sustaining costs ⁶ (\$/lb)	4.75	3.50 – 3.80

Copper production in 2025 was lower than the guidance range driven by lower throughput and recovery resulting from unplanned maintenance and less soluble ore than expected. All cost metrics were above the guidance ranges driven by the lower production and higher processing costs.

Our investment in this asset, of which we are not the operator, continues to be a non-core part of our portfolio.

Jabal Sayid (50% basis), Saudi Arabia

Jabal Sayid's copper production in Q4 2025 was in line with Q3 2025. COS/lb⁷ in Q4 2025 was 6% higher than Q3 2025 mainly due to higher depreciation expense, partially offset by lower C1 cash costs/lb⁶. C1 cash costs/lb⁶ were 36% lower mainly due to the impact of increased gold by-product cost allocations as well as decreased treatment and refining costs due to negotiating lower rates. AISC/lb⁶ was 27% lower than Q3 2025, mainly due to lower C1 cash costs/lb⁶, slightly offset by marginally higher minesite sustaining capital expenditures⁶.

	2025 Actual	2025 Guidance
Copper produced (kt)	32	25 – 35
Cost of sales ⁷ (\$/lb)	2.09	2.00 – 2.30
C1 cash costs ⁶ (\$/lb)	1.28	1.60 – 1.90
All-in sustaining costs ⁶ (\$/lb)	1.46	1.80 – 2.10

Copper production in 2025 was in the upper half of the guidance range. COS/lb⁷ was at the low end of the guidance range, while C1 cash costs/lb⁶ and AISC/lb⁶ were below the guidance ranges due to higher gold by-product cost allocations as well as decreased treatment and refining costs resulting from negotiating lower rates.

FUTURE GROWTH

Fourmile, Nevada, USA¹⁶

Fourmile is a 100% owned Barrick asset in Nevada, located adjacent to Goldrush, that has the potential to be a standalone Tier One Gold Asset¹. Ongoing PFS studies point to the potential for significant resource growth. For the second consecutive year, Fourmile has successfully doubled its declared mineral resource ounces to 2.6 million ounces indicated (4.6Mt at 17.59g/t) and 13 million ounces inferred (25Mt at 16.9g/t). This reflects the ongoing commitment to aggressively grow Fourmile in support of a PFS expected to be completed in 2028.

The resource update reflects a successful year of drilling where a fleet of up to 16 deep diamond core drill rigs achieved 71.4km of drilling across the Fourmile asset. The drilling combined resource definition drilling, extensional step outs and satellite exploration targeting to support growth in the overall known mineralization while also building the resource conversion pipeline. Of particular note are drill holes including FM25-291D which intersected 3.7 meters at 34.47 g/t, 8.3 meters at 20.56 g/t and 3.5 meters at 15.24 g/t which extended the known ore zone of Dorothy by 150 meters from prior drill intercepts. A further intersection 200 meters to the north of Dorothy in FM25-300D intersected 16.0 meters at 38.35 g/t unlocking the potential for mineralization along a 1 kilometer corridor below the Mill Canyon stock to the north. Additionally, deep holes targeting the Lower Rose Stem area (now dubbed Charlie) including FM25-321D, 26.9 meters at 33.71 g/t and 10.7 meters at 5.15 g/t as well as FM25-314D, 21.4 meters at 12.74 g/t were able to confirm mineralization more than 300m further down dip than prior intercepts.

In previous years, drilling at Fourmile has paused over the winter months with drilling recommencing in the spring once snow has been cleared and access regained. However, in 2025 considerable efforts have been made to establish additional drill pads in the lower elevation areas, and develop other substantive controls to enable safe drilling operations through the winter months.

Fourmile continues to progress the planning of the dedicated decline access from twin surface portals located in Crescent Valley. Key infrastructure items such as workshop, offices and change house facilities will be located on previously disturbed land within the Cortez footprint simplifying permitting and creating flexibility in construction timelines. Development is on track to begin in late 2026.

As previously disclosed, Barrick anticipates Fourmile will be incorporated into the NGM joint venture, at fair market value, if certain criteria are met following the completion of drilling and the requisite independent feasibility. Across drilling and studies activities, we spent \$91 million in 2025 (including \$31 million in Q4 2025).

2026 is expected to be a critical year for Fourmile with an anticipated drilling spend of \$150 to \$160 million together with \$20 million of spend on studies work (both expensed) and \$70 million on construction and decline commencement (capital). This phase of the project has been approved with an estimated total cost of \$330 to \$430 million extending through mid-2029.

Goldrush Project, Nevada, USA^{17,18}

Goldrush, which is included within Cortez, is expected to be a long-life underground mine with anticipated annual production in excess of 400,000 ounces of gold per year (100% basis) once in full production by 2028.

In Q4 2025, execution planning continued for key infrastructure projects. Construction contracts for the second surface ventilation raise are in progress and site earthworks were completed to prepare for mobilization of the shaft sinking contractor in Q1 2026. Ventilation modeling was finalized to confirm immediate ventilation requirements, including fan selection and layout for the second ventilation raise. Preliminary engineering for the paste plant advanced to define plant layout and configuration. Laboratory material testing is nearing completion to define paste backfill makeup and cement content necessary to satisfy backfill requirements. The paste plant preliminary design report will be finalized in Q1 2026 and a contract for detailed engineering will be awarded.

Surface dewatering continued in Horse Canyon as the third of three wells planned in 2025 was commissioned. Mine dewatering is on track, with the next wells planned for 2027. The surface shotcrete plant equipment was received at site and foundation construction began. Remaining plant erection and commissioning will occur in Q1 2026.

As of December 31, 2025, project spend was \$490 million on a 100% basis (including \$17 million in Q4 2025) inclusive of the exploration declines. This capital spent to date, together with the remaining expected pre-production capital, is still anticipated to be near the approximate \$1 billion initial capital estimate for the Goldrush project (100% basis).

Along the northeastern edge of Goldrush in the southern KB area, new results from surface drilling returned 60 meters at 23.12 g/t, including 21 meters at 40.55 g/t in a breccia (GRC-25001A). A follow up hole (GRC-25002) returned 11 meters at 17.44 g/t of disseminated mineralization and 6.1 meters at 37.25 g/t, 4.6 meters at 29.2 g/t and 4.6 meters at 23 g/t in a silicified breccia. The latter is consistent with the Fourmile high-grade breccia located 1.5 km to the north. Previous wide spaced drilling confirms continuity between the two deposits but the area below the northern third of the Goldrush deposit is largely untested. Applying the lessons learned at Fourmile, both surface and underground exploration drilling will ramp up in 2026 to evaluate this new opportunity.

Ren, Nevada, USA¹⁹

Ren is a new ore deposit at Goldstrike Underground and a key expansion project at Carlin. Located north of Goldstrike Underground's Meikle and Banshee deposits, Ren is anticipated to produce an average of 140,000 ounces per year (contained ounces, 100% basis) once in full production in 2027.

To develop the deposit, the existing exploration drift has been duplicated, allowing for increased ventilation and secondary egress into the working area. Additional exploration drilling platforms have been constructed from the duplicate drift to support further drilling for both existing resource conversion and further deposit growth.

To support production mining of the deposit, an additional set of twin declines will be driven from the Betze-Post West Barrel open pit layback, extending to the north with the intent to provide life of mine ventilation and a direct path for material to be hauled and hoisted out via the existing Meikle Headframe. To complete the project, a seven-meter finished diameter ventilation shaft will be sunk 550 meters to serve as an exhaust raise and utility conduit for mining the orebody.

During Q4 2025, rehabilitation of the existing exploration drift to support ventilation and utilities continued albeit at a slower rate as a result of less favorable ground conditions. Rehabilitation is expected to finish early in Q1 2026. Work at the West Barrel declines is continuing with completion of key surface infrastructure to support decline development beginning in Q1 2026. Mechanical completion was achieved for the shotcrete plant and building erection is in progress for the equipment maintenance shop. The Ren ventilation shaft pre-sinking work scope is advancing on plan to facilitate transition to production sinking in late Q1 2026. Shaft excavation is nearly complete to pre-sink target depth while site sinking facility construction and galloway erection is nearing completion.

As of December 31, 2025, project spend was \$167 million (including \$29 million in Q4 2025) out of an estimated capital cost of \$410 to \$470 million (100% basis).

Pueblo Viejo Expansion, Dominican Republic²⁰

The Pueblo Viejo life of mine expansion continues to focus on housing, resettlement, and the Naranjo TSF. Detailed engineering for the TWMS is now complete, with permits expected in H1 of 2026 while the permitting package for the starter dam will be submitted within Q1 2026. Critical water projects are advancing well with the new effluent treatment plant engineering at 85% complete and the construction contract awarded, while engineering for the Reverse Osmosis Plant and the new water supply to Dos Palmas community has been tendered, with plans to award in Q1 2026. The dam access road is now in use and the TWMS enabling works underway with pad construction and additional roads. The Diorite Crushing pad is on track to allow the new construction contractor to begin foundation works in Q1 2026 and the Metso Crusher components have now begun to ship.

The housing project at Pueblo Viejo continues with over 600 homes constructed and more than 300 families now resettled. All focus is on completing the remaining 80 houses along with advancing the church and polytechnical school design. 70% of resettlement packages have now been accepted, with the public utility decree issued and full support from authorities to work with all individuals and avoid delays to the project.

As at December 31, 2025, total project spend was \$1,229 million (including \$43 million in Q4 2025) on a 100% basis. The estimated capital cost of the plant expansion and mine life extension project remains approximately \$2.6 billion (100% basis).

Veladero Phase 8 Leach Pad, Argentina

The construction of the Phase 8 leach pad will be executed in three phases which are named 8A, 8B and 8C. Phase 8A has been completed. Phase 8B was approved in Q3 2025, with activities and related spend progressing as planned. The phased execution of the project provides flexibility to align future stages with economic conditions and the applicable regulatory framework. Construction of the project includes cutting, filling, sub-drainage and monitoring, leak collection and recirculation, impermeabilization, as well as pregnant leaching solution collection.

Overall, the total Phase 8 leach pad project spend at December 31, 2025 was \$90 million (\$22 million in Q4 2025) out of an estimated capital cost of \$250-\$260 million (100% basis).

Reko Diq Project, Pakistan²¹

At the end of 2024, Barrick completed an updated feasibility study for the project and added 7.3 million tonnes of copper and 13 million ounces of attributable gold in probable reserves as at December 31, 2024²². Once fully commissioned, the Reko Diq project is projected to deliver 240,000 tonnes of copper production and 297,000 ounces of gold per year during Phase 1 increasing to 460,000 tonnes of copper and 520,000 ounces of gold during the first ten years of Phase 2 (100% basis). These forward-looking estimates are based on an increased 45Mtpa process plant throughput in Phase 1 (from the original 40Mtpa) and 90Mtpa (from the original 80Mtpa) in Phase 2, following the grid size optimization work undertaken as part of the feasibility study.

In light of the recent escalation of security risks and increase in the number of security incidents in the Province of Balochistan, the Company is undertaking a review of all aspects of the Reko Diq project, including with respect to the project's security arrangements, development timetable and capital budget. This review will begin immediately and an update will be provided when the review has been completed.

Capital expenditures commenced in Q2 2024, with total capitalized spend to date of \$849 million (including \$213 million in Q4 2025) (100% basis). Capitalized spend in 2025 was \$721 million.

Kibali Solar Project, DRC

This project entails the design, supply and installation of a 16 MW photovoltaic solar farm with a 15 MW battery energy storage system to complement the existing hydroelectric power stations raising the renewable component of the mine's energy mix from 81% to 85%. The completion of this project is projected to deliver a 53% reduction in fuel consumption in the power plant. During Q4 2025, we completed the power management system integration which enabled the solar photovoltaic field to inject 7,715MWh into the Kibali grid. Power management system optimization is still ongoing to ensure that the supply and system integration remains stable and the full utilization of the benefits provided by the solar project is realized. As at December 31, 2025, project spend was \$45 million (including \$1 million in Q4 2025) out of an estimated capital cost of \$55 million (100% basis).

Lumwana Super Pit Expansion, Zambia²³

The Lumwana Super Pit Expansion is projected to deliver 240,000 tonnes of copper production per annum, from a 52Mtpa process plant expansion, with a mine life of more than 30 years.

The project is tracking slightly ahead of schedule with the target of first copper production during Q1 2028. The main critical path for the process plant expansion is the mill building, where good progress was made during Q4 2025 with the completion of the raft foundation of the mill building and commencement of the reinforcing steel and shutter installation for the first civil plinths. The primary crusher soil remediation has been completed and we expect the civil construction to commence on schedule in Q1 2026. Long-lead equipment manufacturing is continuing to make progress and procurement of future packages is tracking on schedule with the award of key packages during Q4 2025, including the structural steel packages for both the wet and dry plant areas. The first crates of the mill components have been shipped and are en route to site. The building of the third phase of accommodation is ongoing and made steady progress during Q4 2025. The TSF design and reviews have been completed and the construction of the first diversion channel for the expanded facility is currently in progress. All orders for the 2026 mining fleet expansion have been completed and deliveries commenced during Q4 2025, with the PC7000 excavator completed to 90% assembly progress.

Continued progress on the detailed engineering, procurement and construction ensured that the total project remains slightly ahead of schedule. We maintained the focus on delivery of critical milestones in line with the execution schedule. As at Q4 2025, we have spent \$254 million, (including \$106 million in Q4 2025). As at December 31, 2025, the total spend on the expansion project was \$416 million with 2026 expected to be \$750 to \$850 million. The total project capital cost (exclusive of capitalized stripping) is expected to be \$2 billion based on the approved feasibility study.

Exploration

The foundation of our exploration strategy is a deep organizational understanding that discovery through exploration is a long-term investment and the main value driver for the business. Our exploration strategy has multiple elements that all need to be in balance to deliver on Barrick's business plan for growth and long-term sustainability.

First, we seek to deliver projects of a short- to medium-term nature that will drive improvements in mine plans. Second, we seek to make new discoveries that add to Barrick's Tier One Gold Asset¹ portfolio. Third, we work to optimize the value of our major undeveloped projects and finally, we seek to identify emerging third-party opportunities early in their value chain and secure them, where appropriate.

During Q4 2025, Barrick's exploration teams have been active around all our operations, with strong results returned from drilling across NGM in Nevada, as detailed above under Fourmile and Goldrush of this section.

On other advanced projects, drilling at the ARK target in Kibali during the quarter has extended the system a further 300 meters downplunge, while in Reko Diq, the team have identified additional, new porphyry systems.

In early-stage work, framework drilling continues at the Norris property in Canada while we have also made material progress this quarter at our projects in Peru, Saudi Arabia and in the Copper Belt in Zambia and DRC.

a. On an attributable basis.

b. Further information on these non-GAAP financial measures, including detailed reconciliations, is included on pages 54 to 67 of this MD&A.

Our 2025 gold production of 3.26 million ounces was within the guidance range of 3.15 to 3.50 million ounces. As previously disclosed, this was towards the lower end of the range mainly due to lower than planned production at Carlin as production was impacted by a slower than planned ramp-up of the Gold Quarry roaster and delayed access to higher grade underground zones due to poor ground conditions, together with an increase in higher grade ore shipped from Cortez and processed at the Carlin roasters, to the overall benefit of NGM. Gold production was further impacted by lower grades processed than planned at Kibali and the divestiture of both Hemlo and Tongon during Q4 2025. Copper production of 220 thousand tonnes for 2025 was at the higher end of the guidance range of 200 to 230 thousand tonnes.

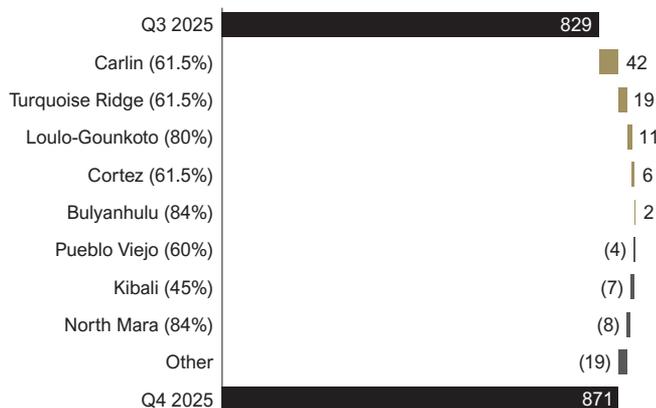

Q4 2025 compared to Q3 2025

In Q4 2025, gold revenues increased by 43% compared to Q3 2025 primarily due to a higher realized gold price⁶, combined with higher sales volume. The average realized price for Q4 2025 was \$4,177 per ounce versus \$3,457 per ounce for Q3 2025. During Q4 2025, the gold price ranged from \$3,820 per ounce to an all-time nominal high of \$4,550 per ounce and closed the quarter at \$4,368 per ounce. Gold prices in Q4 2025 continued to rise as a result of reductions in benchmark interest rates, geopolitical tensions, tariff uncertainty and global economic concerns.

ATTRIBUTABLE GOLD PRODUCTION VARIANCE

(000s oz)

Q4 2025 compared to Q3 2025

In Q4 2025, attributable gold production was 42 thousand ounces higher than Q3 2025, primarily driven by a stronger performance at NGM, mainly at Carlin due to higher throughput and grades processed at both the roasters and the autoclave; and at Turquoise Ridge due to higher grades from the undergrounds; combined with the restart of production at Loulo-Goukoto after regaining control of the mine. These impacts were partially offset by lower production at Tongon and Hemlo (included in the "Other" category above) as a result of the divestitures in Q4 2025. Attributable gold sales were higher than attributable gold production due to the sale of the reacquired gold from Loulo-Goukoto.

Copper revenues in Q4 2025 increased by 61% compared to Q3 2025, primarily due to higher copper sales volume, combined with a higher realized copper price⁶. The average market price in Q4 2025 was \$5.03 per pound versus \$4.44 per pound in Q3 2025. In Q4 2025, the realized copper price⁶ was higher than the market copper price due to the impact of positive provisional pricing adjustments, whereas a negative provisional pricing adjustment was recorded in Q3 2025. During Q4 2025, the copper price ranged from \$4.66 per pound to an all-time nominal high of \$5.88 per pound and closed the quarter at \$5.67 per pound. Copper prices in Q4 2025 were influenced by a decline in the trade-weighted US dollar, supply disruptions and tariff uncertainty.

Attributable copper production in Q4 2025 was 13% higher compared to Q3 2025 driven by higher throughput at Lumwana.

2025 compared to 2024

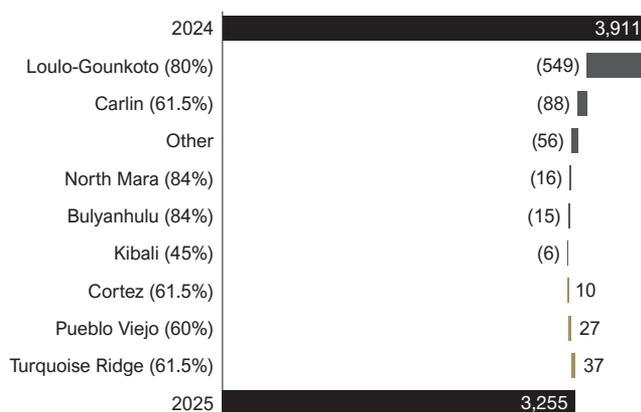

In 2025, gold revenues increased by 28% compared to 2024, primarily due to a higher realized gold price⁶, partially offset by a decrease in sales volumes. The average market gold price for 2025 was \$3,432 per ounce compared to \$2,386 per ounce in 2024.

In 2025, attributable gold production was 3,255 thousand ounces, or 656 thousand ounces lower than 2024, largely driven by the temporary suspension of operations at Loulo-Goukoto on January 14, 2025. Control was subsequently regained on December 15, 2025. In addition to this, lower underground grades were mined at Carlin although this was partially offset by Cortez with more of the higher grade Cortez refractory ore being processed at the Carlin roasters. A further driver of the decrease was the divestitures of Tongon and Hemlo (included in the "Other" category) in Q4 2025. These unfavorable impacts were offset by increased production at Turquoise Ridge due to higher underground tonnes mined and higher tonnes processed.

ATTRIBUTABLE GOLD PRODUCTION VARIANCE

(000s oz)

Year ended December 31, 2025

Copper revenues for 2025 were 73% higher compared to 2024 due to higher copper sales volume, combined with a higher realized copper price⁶. For 2025, the realized copper price⁶ was higher than the market copper price due to the impact of positive provisional pricing adjustments, whereas the realized copper price⁶ was in line with the market copper price in 2024.

Attributable copper production for 2025 was 25 thousand tonnes higher than 2024, mainly due to higher grades processed and higher recoveries at Lumwana.

- a. Gold COS/oz is calculated as cost of sales across our gold operations (excluding sites in closure or care and maintenance) divided by ounces sold (both on an attributable basis using Barrick's ownership share). Copper COS/lb is calculated as cost of sales across our copper operations divided by pounds sold (both on an attributable basis using Barrick's ownership share).
- b. Further information on these non-GAAP financial measures, including detailed reconciliations, is included on pages 54 to 67 of this MD&A.

Q4 2025 compared to Q3 2025

In Q4 2025, gold COS on a consolidated basis was 43% higher compared to Q3 2025, primarily as a result of higher sales volumes, combined with higher depreciation expense and increased royalty expense as a result of a higher realized gold price⁶. Our 45% interest in Kibali and 24.5% interest in Porgera are equity accounted and therefore each mine's COS is excluded from our consolidated gold COS. Our per ounce metrics, gold COS/oz⁷ and TCC/oz⁶, includes our proportionate share of cost of sales at our equity method investees, and were 22% and 6% higher, respectively, than Q3 2025 primarily due to the inclusion of higher cost Loulo-Goukoto ounces and increased sulfuric acid consumption and prices at Carlin. This was combined with higher royalties due to an increase in the realized gold price⁶ (impact approximately \$45/oz). COS/oz⁷ was further impacted as it includes the impact of the fair value increment on inventory resulting from the purchase price allocation when we regained control of Loulo-Goukoto.

In Q4 2025, gold AISC/oz⁶ increased by 3% compared to Q3 2025, primarily due to higher TCC/oz⁶ as described above, partially offset by lower general and administrative expenses, while minesite sustaining capital expenditures⁶ on a per ounce basis remained relatively consistent with the prior quarter.

In Q4 2025, copper COS on a consolidated basis was 46% higher than Q3 2025, primarily due to the impact of higher copper sales volumes. Our 50% interests in Zaldivar and Jabal Sayid are equity accounted and therefore we do not include their COS in our consolidated copper COS. Our per pound metrics, copper COS/lb⁷ and C1 cash costs/lb⁶ increased by 26% and 25%, respectively, compared to Q3 2025 primarily due to higher costs at Zaldivar and higher mining maintenance costs due to lower fleet availabilities from premature failures as well as higher power costs at Lumwana.

In Q4 2025, copper AISC/lb⁶, which also includes our proportionate share of equity method investees, was 15% higher than Q3 2025, primarily reflecting higher C1 cash costs/lb⁶, partially offset by lower minesite sustaining capital expenditures⁶ on a per pound basis.

2025 compared to 2024

In 2025, gold COS on a consolidated basis was 2% higher than 2024 primarily due to increased royalties as a result of a higher realized gold price⁶, partially offset by the impact of lower sales volume. Our per ounce metrics, gold COS/oz⁷ and TCC/oz⁶, after including our proportionate share of COS at our equity method investees (refer to explanation above), were 18% and 13% higher, respectively, than 2024, primarily due to lower production across the portfolio (resulting in reduced fixed cost dilution), lower grades processed at a number of operations, higher share-based compensation and higher royalties (impact approximately \$55/oz) associated with the increase in the realized gold price⁶.

In 2025, gold AISC/oz⁶ increased by 10% compared to 2024 primarily due to higher TCC/oz⁶, partially offset by lower minesite sustaining capital expenditures⁶.

In 2025, copper COS on a consolidated basis was 24% higher than 2024, primarily due to higher sales volumes. Our 50% interests in Zaldivar and Jabal Sayid are equity accounted and therefore we do not include their COS in our consolidated copper COS. Copper COS/lb⁷ and C1 cash costs/lb⁶ were 3% and 5% lower, respectively, compared to 2024, primarily due to higher grades processed and higher capitalized waste stripping at Lumwana, partially offset by higher costs at Zaldivar.

Copper AISC/lb⁶ was 7% lower than 2024, primarily due to a lower C1 cash costs/lb⁶, as discussed above, combined with lower minesite sustaining capital expenditures⁶.

2025 compared to Guidance

2025 gold COS/oz⁷ and TCC/oz⁶ were \$1,697 and \$1,199 respectively, which were both higher than our guidance ranges of \$1,460 to \$1,560 per ounce and \$1,050 to \$1,130 per ounce, respectively. Gold AISC/oz⁶ for 2025 of \$1,637 was also higher than the guidance range of \$1,460 to \$1,560 per ounce. All gold cost metrics were higher than the guidance ranges mainly due to higher royalties from the higher realized gold price⁶. Our cost guidance for 2025 was based on a gold price assumption of \$2,400/oz. Given the actual realized gold price⁶ was considerably higher at \$3,501/oz, the cost guidance ranges need to be increased by \$55/oz to provide a more meaningful comparison. After adjusting for the realized gold price⁶, the guidance ranges are as follows: COS/oz⁷ of \$1,515 to \$1,615, TCC/oz⁶ of \$1,105 to \$1,185 and AISC/oz⁶ of \$1,515 to \$1,615. After adjusting for the gold price, COS/oz⁷ was higher than the guidance range due to the impact of the fair value increment on inventory resulting from the purchase price allocation when we regained control of Loulo-Goukoto. TCC/oz⁶ and AISC/oz⁶ were slightly higher than the adjusted guidance ranges mainly due to higher consumable prices at many sites including NGM that was partially driven by the impact of tariffs.

2025 copper COS/lb⁷ and AISC/lb⁶ were \$2.91 and \$3.20, respectively, which were both slightly higher than our guidance ranges of \$2.50 to \$2.80 per pound and \$2.80 to \$3.10 per pound, respectively, as a result of higher royalties due to a higher realized copper price⁶. Our cost guidance for 2025 was based on a copper price assumption of \$4.00/lb. After adjusting for the impact of higher copper prices, our actual COS/lb⁷ and AISC/lb⁶ were above the guidance ranges mainly due to a year end inventory writedown at Zaldivar. 2025 C1 cash costs⁶ of \$2.14 per pound was also slightly above our guidance range of \$1.80 to \$2.10 per pound.

General and Administrative Expenses

(\$ millions)	For the three months ended		For the years ended		
	12/31/25	9/30/25	12/31/25	12/31/24	12/31/23
Corporate administration	25	25	103	95	101
Share-based compensation ^a	39	52	119	20	25
General & administrative expenses	64	77	222	115	126
2025 Guidance					
Corporate administration			~120		
Share-based compensation			~40		
General & administrative expenses			~160		

a. Based on US\$45.76 share price as at December 31, 2025 (September 30, 2025: US\$34.12; 2024: US\$15.71; 2023: US\$18.09).

Q4 2025 compared to Q3 2025

In Q4 2025, general and administrative expenses decreased by \$13 million compared to Q3 2025, primarily due to lower share-based compensation as a result of a smaller increase in our share price during Q4 2025 compared to Q3 2025.

2025 compared to 2024

General and administrative expenses in 2025 increased by \$107 million compared to 2024 due to higher share-based compensation due to a significant increase in our share price.

2025 compared to Guidance

General and administrative expenses in 2025 of \$222 million were higher than guidance of ~\$160 million. Corporate administration expenses of \$103 million were below our guidance of ~\$120 million, highlighting the continued benefit of our cost discipline, while share-based compensation expenses of \$119 million were higher than our guidance of ~\$40 million due to a significant increase in our share price during the current year whereas our guidance was based on a share price assumption of \$16.39 as previously disclosed.

Exploration, Evaluation and Project Costs

(\$ millions)	For the three months ended		For the years ended		
	12/31/25	9/30/25	12/31/25	12/31/24	12/31/23
Global exploration and evaluation	82	58	220	153	143
Project costs:					
Reko Diq	4	4	11	126	60
Other	45	23	109	76	118
Global exploration and evaluation and project expense	131	85	340	355	321
Minesite exploration and evaluation	8	7	27	37	40
Total exploration, evaluation and project expenses	139	92	367	392	361

	2025 Actuals	2025 Guidance
E&E	247	220 – 240
Project expenses	120	110 – 130
Total E&E and project expenses	367	330 – 370

Q4 2025 compared to Q3 2025

Exploration, evaluation and project expenses for Q4 2025 increased by \$47 million compared to Q3 2025. This was primarily due to higher global exploration and evaluation costs and higher project costs across various projects. The increase in project costs was also driven by legal and consulting costs related to the Hemlo and Tongon divestitures (included in "Other").

2025 compared to 2024

Exploration, evaluation and project costs for 2025 decreased by \$25 million compared to 2024, primarily due to lower project costs at Reko Diq as the feasibility study was completed at the end of 2024, which resulted in the conversion of resources to mineral reserves and consequently project development costs are now capitalized. This was partially offset by higher global exploration and evaluation costs at Fourmile from the ramp-up of drilling activities and higher other project costs relating to the divestitures of Hemlo and Tongon and various other projects.

2025 compared to Guidance

Exploration, evaluation and project expenses for 2025 of \$367 million were at the upper end of the guidance range. Exploration and evaluation costs of \$247 million were slightly higher than the guidance range, mainly relating to the ramp-up of drilling activity at Fourmile, while project expenses of \$120 million were at the midpoint of the guidance range.

Finance Costs, Net

(\$ millions)	For the three months ended		For the years ended		
	12/31/25	9/30/25	12/31/25	12/31/24	12/31/23
Interest expense ^a	119	93	409	452	387
Accretion	22	22	89	89	87
Interest capitalized	(19)	(16)	(55)	(33)	(42)
Other finance costs	0	4	5	5	7
Finance income	(58)	(60)	(221)	(281)	(269)
Finance costs, net	64	43	227	232	170
2025 Guidance			270 – 310		

a. For Q4 2025 and 2025, interest expense includes approximately \$nil and \$24 million, respectively, of non-cash interest expense relating to the streaming agreement with Royal Gold Inc. (Q3 2025: \$8 million; 2024: \$33 million; 2023: \$32 million). Interest expense also includes approximately \$1 million and \$11 million for Q4 2025 and 2025, respectively, relating to finance costs in Argentina (Q3 2025: \$1 million; 2024: \$78 million; 2023: \$nil)

Q4 2025 compared to Q3 2025

In Q4 2025, finance costs, net increased by 49% compared to Q3 2025, primarily driven by higher interest expense resulting from the discounting of the resettlement reimbursement receivable at Pueblo Viejo.

2025 compared to 2024

In 2025, finance costs, net were 2% lower than 2024, primarily due to lower interest expense due to decreased finance costs in Argentina associated with cash repatriation, partially offset by lower finance income.

2025 compared to Guidance

Finance costs, net for 2025 of \$227 million were lower than the guidance range of \$270 to \$310 million, mainly due to higher than expected finance income earned on our cash balance resulting from our strong cash flow generation.

Additional Significant Statement of Income Items

(\$ millions)	For the three months ended		For the years ended		
	12/31/25	9/30/25	12/31/25	12/31/24	12/31/23
Impairment charges (reversals)	5	3	12	(457)	312
Loss (gain) on currency translation	6	(3)	3	39	93
Closed mine rehabilitation	(7)	4	8	59	16
Other (income) expense	(839)	(193)	(509)	214	(195)

Impairment Charges (Reversals)

(\$ millions)	For the three months ended		For the years ended		
	12/31/25	9/30/25	12/31/25	12/31/24	12/31/23
Asset impairments (reversals)					
Carlin	2	1	6	82	4
Cortez	3	1	4	0	0
Pueblo Viejo	0	0	1	0	0
Hemlo	0	1	1	0	0
Lumwana	0	0	0	(655)	0
Veladero	0	0	0	(437)	0
Long Canyon	0	0	0	49	280
Tanzania	0	0	0	0	22
Other	0	0	0	20	6
Total asset impairment charges (reversals)	5	3	12	(941)	312
Goodwill					
Loulo-Goukoto	0	0	0	484	0
Total goodwill impairment charges	0	0	0	484	0
Total impairment charges (reversals)	5	3	12	(457)	312

In Q4 2025 and the full year 2025, we recognized \$5 million and \$12 million, respectively, of net impairment charges, with no significant impairment charges or reversals in these periods. This compares to net impairment reversals of \$941 million in 2024, mainly due to non-current asset impairment reversals of \$655 million at Lumwana as a result of the inclusion of the Super Pit Expansion in the LOM plan and higher copper prices at Lumwana, and of \$437 million at Veladero, reflecting higher gold prices, extended mine life and lower country risk. In addition, we recognized a goodwill impairment of \$484 million at Loulo-Goukoto in 2024.

Refer to note 21 to the Financial Statements for a full description of impairment charges, including pre-tax amounts and sensitivity analysis.

Loss on Currency Translation

Loss on currency translation for 2025 decreased by \$36 million compared to 2024. The loss of \$3 million in 2025 was mainly due to unrealized foreign currency losses relating to the Zambian kwacha and Argentine peso, largely offset by gains relating to the West African CFA franc and Chilean peso. The loss of \$39 million in 2024 was primarily due to realized foreign currency losses relating to the Chilean peso, which were hedged and a corresponding gain on non-hedge derivatives was recorded in other income. This was combined with unrealized foreign currency losses relating to the Argentine peso and West African CFA franc.

Currency fluctuations result in a revaluation of our local currency denominated VAT receivables and local currency denominated payable balances.

Closed mine rehabilitation

Closed mine rehabilitation expense in 2025 was \$8 million compared to \$59 million in 2024, as the prior year included higher closure cost estimates at various closure sites.

Other (Income) Expense

In Q4 2025, other income was \$839 million, while the full year 2025 was \$509 million. Other income in Q4 2025 mainly relates to the gain on the sale of non-current assets totaling \$732 million, comprised of our Hemlo gold mine (\$545 million), our interest in the Tongon gold mine (\$134 million) and the Alturas project (\$53 million). This was combined with the accounting impact of regaining control of the Loulo-Goukoto complex on December 16, 2025, partially offset by the settlement payment of \$253 million to the Government of Mali in November 2025. In Q3 2025, other income of \$193 million primarily related to the \$250 million revaluation of our 80% equity investment in Loulo-Goukoto, as it was deconsolidated in Q2 2025 and recognized as an investment at fair value following the change of control after it was placed under a temporary provisional administration on June 16, 2025. The full year 2025 was further impacted by the gain on sale of our 50% interest in the Donlin Gold project of \$745 million, partially offset by the net loss on the deconsolidation and recognition of our 80% equity investment in Loulo-Goukoto in Q2 2025 (refer to notes 4 and 35 for further details). Other expense of \$214 million in 2024 mainly relates to a payment to the Government of Mali to advance negotiations, the customs and royalty settlement at Tongon, and interest and penalties recognized following the settlement of the Zaldívar Tax Assessment in Chile.

For a further breakdown of other (income) expense, refer to note 9 to the Financial Statements.

Income Tax Expense

Income tax expense was \$1,651 million in 2025. The unadjusted effective income tax rate for 2025 was 19% of the income before income taxes.

The underlying effective income tax rate on ordinary income for 2025 was 25% after adjusting for the impact of the resolution of uncertain tax positions; the impact of foreign currency translation losses on current and deferred tax balances; the impact of the recognition and de-recognition of deferred tax assets; the impact of the sale of non-current assets; the impact of Loulo-Goukoto; and the impact of other expense adjustments.

We record deferred tax charges or credits if changes in facts or circumstances affect the estimated tax basis of assets and, therefore, the expectations in our ability to realize deferred tax assets. The interpretation of tax regulations and legislation as well as their application to our business is complex and subject to change.

We have significant amounts of deferred tax assets, including tax loss carryforwards, and also deferred tax liabilities. In 2025, the sale of our Hemlo mine resulted in a taxable gain that provided sufficient Canadian taxable profit to utilize a portion of previously unrecognized deferred tax assets from loss carryforwards. Outside of this transaction, it remains not probable that sufficient future taxable profits will be available in Canada, and no additional tax loss carryforwards are expected to be utilized in the foreseeable future. Potential changes in any of these amounts, as well as our ability to realize deferred tax assets in Canada or elsewhere, could significantly affect net income or cash flow in future periods. For further details on income tax expense, refer to note 12 to the Financial Statements.

Reconciliation to Canadian Statutory Rate

For the years ended	12/31/25	12/31/24

Income tax expense	1,651	1,520

a. We are able to claim certain allowances, incentives and tax deductions unique to extractive industries that result in a lower effective tax rate.

b. We operate in multiple foreign tax jurisdictions that have tax rates different than the Canadian statutory rate.

The more significant items impacting income tax expense in 2025 and 2024 include the following:

Currency Translation

Current and deferred tax balances are subject to remeasurement for changes in foreign currency exchange rates each period. This is required in countries where tax is paid in local currency and the subsidiary has a different functional currency (typically US dollars). The most significant relate to Argentine and Malian tax balances.

In 2025, a tax recovery of \$26 million arose from net translation gains on deferred tax balances in Mali (prior to their deconsolidation) and Argentina due to the strengthening of the West African CFA, partially offset by the weakening of the Argentine peso against the US dollar. In 2024, a tax expense of \$52 million arose from translation losses on tax balances, mainly due to the weakening of the Argentine peso and the West African CFA against the US dollar. These net translation losses are included within income tax expense.

Withholding Taxes

In 2025, we have recorded \$6 million (2024: \$3 million related to Saudi Arabia) of dividend withholding taxes related to the undistributed earnings of our subsidiaries in Saudi Arabia. We have also recorded \$139 million (2024: \$45 million, related to Saudi Arabia, Peru and the United States) of dividend withholding taxes related to the distributed earnings of our subsidiaries in Argentina, Côte d'Ivoire, Saudi Arabia, Tanzania and the United States.

Accounting for Joint Ventures and Associates

NGM is a limited liability company treated as a flow through partnership for US tax purposes. The partnership is not subject to federal income tax directly, but each of its partners is liable for tax on its share of the profits of the partnership. As such, Barrick accounts for its current and deferred income tax associated with the investment (61.5% share) following the principles in IAS 12.

Mining Taxes

NGM is subject to a Net Proceeds of Minerals tax in Nevada at a rate of 5% and the tax expense recorded in 2025 was \$282 million (2024: \$145 million). The other significant mining tax is the Dominican Republic's Net Profits Interest tax, which is determined based on cash flows as defined by the Pueblo Viejo Special Lease Agreement. A tax expense of \$283 million (2024: \$134 million) was recorded for this in 2025. Both taxes are included on a consolidated basis in the Company's consolidated statements of income.

United States Tax Reform

Under the Inflation Reduction Act signed in August 2022, the United States implemented a 15% corporate alternative minimum tax ("CAMT") on applicable financial statement income, effective for tax years beginning after December 31, 2022, with CAMT credit carryforwards having an indefinite life. Barrick is subject to CAMT as it meets the requisite income thresholds for a foreign-parented multi-national group.

While final regulations are still awaited, since its introduction, Barrick has recognized a deferred tax asset from the CAMT credit carryforwards anticipating recovery against future US Federal Income Tax liabilities.

Organisation for Economic Co-operation and Development ("OECD") Pillar Two model rules

We applied the exception under the amendments to IAS 12 and are not recognizing or disclosing deferred tax assets and liabilities related to Pillar Two income taxes.

Our review of Pillar Two for the current year, based on the OECD's Transitional Safe Harbour rules implemented in the Global Minimum Tax Act in Canada, has not identified any material amounts to be accrued for 2025, and we do not expect the new safe harbors to result in a material incremental tax cost. As the law is evolving in Canada and elsewhere, we will continue to monitor the impact of this legislation.

FINANCIAL CONDITION REVIEW

Summary Balance Sheet and Key Financial Ratios

(\$ millions, except ratios and share amounts) As at December 31	2025	2024	2023
Total cash and equivalents	6,706	4,074	4,148
Current assets	3,511	3,558	3,290
Non-current assets	41,360	39,994	38,373
Total Assets	51,577	47,626	45,811
Current liabilities excluding short-term debt	3,441	2,618	2,345
Non-current liabilities excluding long-term debt ^a	7,517	7,023	6,738

Debt-to-equity ^d	0.13:1	0.14:1	0.15:1
Net leverage ^e	-0.2:1	0.1:1	0.1:1

a. Non-current financial liabilities as at December 31, 2025 were \$5,684 million (2024: \$5,215 million; 2023: \$5,221 million).

b. As of January 27, 2026, the number of common shares outstanding is 1,675,360,395.

c. Represents current assets divided by current liabilities (including short-term debt) as at December 31, 2025, December 31, 2024 and December 31, 2023.

d. Represents debt divided by total shareholders' equity (including minority interest) as at December 31, 2025, December 31, 2024, and December 31, 2023.

e. Further information on these non-GAAP financial measures, including detailed reconciliations, is included on pages 54 to 67 of this MD&A.

Balance Sheet Review

Total assets were \$51.6 billion at December 31, 2025, higher than total assets at December 31, 2024, driven by our strong cash flow generation and the cash proceeds received from the sale of certain non-core assets, even after providing increased returns to shareholders and investing in our future through project capital expenditures.

Our asset base is primarily comprised of non-current assets such as property, plant and equipment and equity method investments, reflecting the capital-intensive nature of the mining business and our history of growth through acquisitions and creation of joint ventures with other mining companies. Other significant assets include production inventories, indirect taxes recoverable and receivable, concentrate sales receivables, other government transaction and joint venture related receivables, as well as cash and equivalents.

Total liabilities at December 31, 2025 were \$15.7 billion, higher than total liabilities at December 31, 2024. Our liabilities are primarily comprised of debt, other current and non-current liabilities (such as provisions, derivative liabilities and deferred income tax liabilities), and accounts payable.

Financial Position and Liquidity

We believe we have sufficient financial resources to meet our business requirements for the foreseeable future, including capital expenditures, working capital requirements, interest payments, environmental rehabilitation, derivative settlements, securities buybacks and dividends.

Total cash and cash equivalents as at December 31, 2025 were \$6.7 billion. Our capital structure comprises a mix of debt, non-controlling interest (primarily at NGM) and shareholders' equity. As at December 31, 2025, our total debt was \$4.7 billion (debt, net of cash and equivalents was negative \$2,003 million) and our debt-to-equity ratio was 0.13:1. This compares to debt as at December 31, 2024 of \$4.7 billion (debt, net of cash and cash equivalents was \$655 million), and a debt-to-equity ratio of 0.14:1.

In 2026, we have capital commitments of \$828 million and expect to incur attributable sustaining and project capital expenditures⁶ of approximately \$4,000 to \$4,450 million based on our guidance range on page 15. In 2026, we have contractual obligations and commitments of \$1,157 million associated with purchase obligations for supplies and consumables. In addition, we have \$283 million in interest payments and other amounts as detailed in the table on page 53. We expect to fund these commitments through operating cash flow, which is our primary source of liquidity, as well as existing cash balances as necessary. As previously disclosed, we authorized a 2025 share buyback program, where we may purchase up to \$1.5 billion of Barrick's shares. We purchased the maximum \$1.5 billion of shares under this program, including \$500 million during Q4 2025. A share buyback program has not been authorized for 2026.

On February 4, 2026, the Board of Directors announced the declaration of a \$0.42 per share dividend in respect of performance for the fourth quarter of 2025, representing an increase of 140% over the third quarter, and announced a new dividend policy.

In Q4 2025 and going forward, the Company's new dividend policy targets a total payout of 50% of attributable free cash flow on an annualized basis, comprised of a fixed base quarterly dividend of \$0.175 per share and a performance top-up component at each year end based on the attributable free cash flow during the year. The dividend paid in any given year may be higher or lower than the 50% target based on the strength of cash flow, capital needs, balance sheet considerations, and other factors.

The declaration and payment of dividends is at the discretion of the Board of Directors, and will depend on the Company's financial results, cash requirements, future prospects, the number of outstanding common shares, and other factors deemed relevant by the Board.

Our operating cash flow is dependent on the ability of our operations to deliver projected future cash flows. The market prices of gold and to a lesser extent, copper, are the primary drivers of our operating cash flow. Other options to enhance liquidity include portfolio optimization; issuance of equity or long-term debt securities in the public markets or to private investors (Moody's and S&P currently rate Barrick's outstanding long-term debt as investment grade, with ratings of A3 and BBB+, respectively); and drawing on the \$3.0 billion available under our undrawn Credit Facility (subject to compliance with covenants and the making of certain representations and warranties, this facility is available for drawdown as a source of financing). In May 2025, we completed an update to our undrawn \$3.0 billion revolving Credit Facility, including an extension of the termination date by one year to May 2030. The revolving Credit Facility incorporates sustainability-linked metrics which are made up of annual environmental and social performance targets directly influenced by Barrick's actions, rather than based on external ratings. The performance targets include Scope 1 and Scope 2 GHG emissions intensity, water use efficiency (reuse and recycling rates), and TRIFR⁸. Barrick may incur positive or negative pricing adjustments on drawn credit spreads and standby fees based on its sustainability performance versus the targets that have been set. The Credit Facility was undrawn as at December 31, 2025. The key financial covenant in our undrawn Credit Facility requires Barrick to maintain a net debt to total capitalization ratio of less than 0.60:1. Barrick's net debt to total capitalization ratio was (0.06):1 as at December 31, 2025 (0.02:1 as at December 31, 2024).

Summary of Cash Inflow (Outflow)

(\$ millions)	For the		For the years ended		
	three months ended		12/31/25	12/31/24	12/31/23
	12/31/25	9/30/25	12/31/25	12/31/24	12/31/23

Shareholder loan repayments from equity method investments	121	64	298	155	7
Investment (purchases) sales	43	0	43	97	(23)
Other	2	0	4	19	13
Total investing inflows (outflows)	278	(861)	(1,236)	(2,764)	(2,816)
Financing activities					
Net change in debt ^a	(4)	(3)	(26)	(14)	(56)
Dividends ^b	(294)	(254)	(890)	(696)	(700)
Net disbursements to non-controlling interests	(570)	(423)	(1,398)	(639)	(514)
Share buyback program	(500)	(589)	(1,500)	(498)	0
Other	0	(26)	(9)	52	65
Total financing outflows	(1,368)	(1,295)	(3,823)	(1,795)	(1,205)
Effect of exchange rate	1	1	2	(6)	(3)
Increase (decrease) in cash and equivalents	1,637	267	2,632	(74)	(292)

a. The difference between the net change in debt on a cash basis and the net change on the balance sheet is due to changes in non-cash charges, specifically the unwinding of discounts and amortization of debt issue costs.

b. For the three months and year ended December 31, 2025, we declared and paid dividends per share in US dollars totaling \$0.175 and \$0.525, respectively (September 30, 2025: declared and paid \$0.15; 2024: declared and paid \$0.40; 2023: declared and paid \$0.40).

Q4 2025 compared to Q3 2025

In Q4 2025, we generated \$2,726 million in operating cash flow, compared to \$2,422 million in Q3 2025. The increase of \$304 million was primarily due to the higher realized gold price⁶, combined with increased gold sales volumes. These impacts were slightly offset by an increase in gold TCC/oz⁶. Operating cash flow was also negatively impacted by an increase in cash taxes paid and higher interest paid as a result of the timing of semi-annual interest payments on our bonds, which primarily occur in the second and fourth quarters. These results were further impacted by an unfavorable working capital movement, mainly in accounts receivable, partially offset by a favorable movement in inventory.

Cash inflows from investing activities in Q4 2025 were \$278 million, compared to outflows of \$861 million in Q3 2025. The increased inflow of \$1,139 million was primarily due to proceeds from the sale of non-current assets of \$1,163 million, which includes our Hemlo gold mine, our interest in the Tongon gold mine and the Alturas project. This was partially offset by an increase in capital expenditures primarily due to higher project capital expenditures⁶ relating to the Lumwana Super Pit Expansion project, combined with higher minesite sustaining capital expenditures⁶ at Pueblo Viejo as a result of restoring fleet reliability and increased activities at the Llagal TSF.

Net financing cash outflows for Q4 2025 amounted to \$1,368 million, compared to \$1,295 million in Q3 2025. The increased outflow of \$73 million was primarily due to higher net disbursements to non-controlling interests, primarily to Newmont in relation to their interests in NGM and Pueblo Viejo, and higher dividends paid as the Board increased the quarterly base dividend by 25% to \$0.125 per share in Q4 2025. This was partially offset by lower repurchases of shares under our share buyback program compared to Q3 2025.

2025 compared to 2024

In 2025, we generated \$7,689 million in operating cash flow, compared to \$4,491 million in 2024. The increase of \$3,198 million was primarily due to higher realized gold and copper prices⁶, combined with lower copper C1 cash costs/lb⁶. These impacts were partially offset by lower gold sales volumes and an increase in gold TCC/oz⁶. Operating cash flow was further impacted by a favorable movement in working capital, mainly in inventory, VAT receivable and other current liabilities, partially offset by an unfavorable movement in other current assets and accounts payable. These favourable impacts were partially offset by higher cash taxes paid.

Cash outflows from investing activities for 2025 were \$1,236 million compared to \$2,764 million in 2024. The decreased outflow of \$1,528 million was primarily due to proceeds from the sale of non-current assets of \$2,162 million, which includes our interest in the Donlin project, our Hemlo gold mine, our interest in the Tongon gold mine and the Alturas project. This was partially offset by increased capital expenditures as a result of higher project capital expenditures⁶ mainly related to costs being capitalized at Reko Diq as the feasibility study was completed in Q4 2024 and at Lumwana on the Super Pit Expansion project, partially offset by lower minesite sustaining capital expenditures⁶ mainly at Loulo-Goukoto as operations were temporarily suspended and the mine was subsequently placed under a temporary provisional administration until December 16, 2025.

Net financing cash outflows for 2025 amounted to \$3,823 million, compared to \$1,795 million in 2024. The higher outflow of \$2,028 million is primarily due to increased repurchases of shares under our share buyback program in 2025, combined with higher net disbursements to non-controlling interests, primarily to Newmont in relation to their interests in NGM and Pueblo Viejo. The increase in net financing cash flows was further impacted by higher dividends paid as Q3 and Q4 2025 included a \$0.05 performance dividend, reflecting our increased cash position, and the Board increased the quarterly base dividend by 25% to \$0.125 per share in Q4 2025.

Summary of Financial Instruments^a

a. Refer to notes 25, 26 and 28 to the Financial Statements for more information regarding financial instruments, fair value measurements and financial risk management, respectively.

COMMITMENTS AND CONTINGENCIES

Litigation and Claims

We are currently subject to various litigation proceedings as disclosed in note 36 to the Financial Statements, and we may be involved in disputes with other parties in the future that may result in litigation. If we are unable to resolve these disputes favorably, it may have a material adverse impact on our financial condition, cash flow and results of operations.

Contractual Obligations and Commitments

In the normal course of business, we enter into contracts that give rise to commitments for future minimum payments. The following table summarizes the remaining contractual maturities of our financial liabilities and operating and capital commitments shown on an undiscounted basis:

(\$ millions)	Payments due as at December 31, 2025						Total
	2026	2027	2028	2029	2030	2031 and thereafter	
Debt ^a							
Repayment of principal	47	0	0	0	0	4,630	4,677
Capital leases	9	9	5	4	3	17	47
Interest	283	280	279	279	279	2,394	3,794
Provisions for environmental rehabilitation ^b	166	121	87	83	68	1,915	2,440
Restricted share units	93	26	0	0	0	0	119
Pension benefits and other post-retirement benefits	5	5	5	4	4	72	95
Purchase obligations for supplies and consumables ^c	1,157	302	199	151	143	1,885	3,837
Capital commitments ^d	828	947	301	208	45	0	2,329
Social development costs ^e	62	22	24	16	8	54	186
Other obligations ^f	68	65	63	59	60	491	806
Total	2,718	1,777	963	804	610	11,458	18,330

- a. Debt and Interest: Our debt obligations do not include any subjective acceleration clauses or other clauses that enable the holder of the debt to call for early repayment, except in the event that we breach any of the terms and conditions of the debt or for other customary events of default. We are not required to post any collateral under any debt obligations. Projected interest payments on variable rate debt were based on interest rates in effect at December 31, 2025. Interest is calculated on our long-term debt obligations using both fixed and variable rates.
- b. Provisions for environmental rehabilitation: Amounts presented in the table represent the undiscounted uninflated future payments for the expected cost of provisions for environmental rehabilitation.
- c. Purchase obligations for supplies and consumables: Includes commitments related to new purchase obligations to secure supplies of consumables such as LNG, acid, tires and cyanide for our production process and spares for heavy mining equipment.
- d. Capital commitments: Purchase obligations for capital expenditures include only those items where binding commitments have been entered into.
- e. Social development costs: Includes a commitment of \$14 million in 2031 and thereafter related to the funding of a power transmission line in Argentina.
- f. Other obligations includes the Pueblo Viejo joint venture partner shareholder loan, the deposit on the Pascua-Lama silver sale agreement with Wheaton Precious Metals Corp. due in 2039, and minimum royalty payments.

REVIEW OF QUARTERLY RESULTS

Quarterly Information^a

- a. Sum of all the quarters may not add up to the annual total due to rounding.
- b. Further information on these non-GAAP financial measures, including detailed reconciliations, is included on pages 54 to 67 of this MD&A.
- c. Calculated using weighted average number of shares outstanding under the basic method of earnings per share.
- d. Amounts presented on a consolidated cash basis.

Our recent financial results reflect our emphasis on cost discipline, an agile management structure that empowers our site-based leadership teams and a portfolio of Tier One Gold Assets¹. This, combined with a significant increase in the gold price and ongoing strength in the copper price, has resulted in strong operating cash flows over the past several quarters and record high free cash flow⁶ for 2025. The positive operating cash flow generated has allowed us to continue to reinvest in our business including our key growth projects, maintain a strong balance sheet and materially increase returns to shareholders through share buybacks and a rising dividend.

In addition to the strength in metal prices, net earnings has also been impacted by the following items in each quarter, which have been excluded from adjusted net earnings⁶. In 2025, we recorded a net loss of \$625 million on the deconsolidation of Loulo-Gounkoto following the change of control after it was placed under a temporary provisional administration on June 16, 2025 and subsequent accounting impact of regaining control on December 16, 2025 (refer to note 35 of the Financial Statements for further details), which impacted Q2, Q3 and Q4 of 2025. In addition, in Q4 2025, we recorded a gain on the sale of non-current assets of our Hemlo gold mine (\$545 million), our interest in the Tongon gold mine (\$134 million) and the Alturas project (\$53 million). In Q2 2025, we recorded a gain of \$745 million on the sale of our 50% interest in the Donlin Gold project. In Q4 2024, we recorded non-current asset impairment reversals of \$655 million at Lumwana and of \$437 million at Veladero. In addition, we recorded a goodwill impairment of \$484 million related to Loulo-Gounkoto. In Q2 2024, we recorded a provision following the proposed settlement of the Zaldívar Tax Assessments in Chile (refer to note 36 of the Financial Statements).

INTERNAL CONTROL OVER FINANCIAL REPORTING AND DISCLOSURE CONTROLS AND PROCEDURES

Management is responsible for establishing and maintaining adequate internal control over financial reporting and disclosure controls and procedures. Internal control over financial reporting is a framework designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with IFRS. The Company's internal control over financial reporting framework includes those policies and procedures that: (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the Company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with IFRS, and that receipts and expenditures of the Company are being made only in accordance with authorizations of management and directors of the Company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Company's assets that could have a material effect on the Company's consolidated financial statements.

Disclosure controls and procedures form a broader framework designed to provide reasonable assurance that other financial information disclosed publicly fairly presents in all material respects the financial condition, results of operations and cash flows of the Company for the periods presented in this MD&A and Barrick's Annual Report. The Company's disclosure controls and procedures framework includes processes designed to ensure that material information relating to the Company, including its consolidated subsidiaries, is made known to management by others within those entities to allow timely decisions regarding required disclosure.

Together, the internal control over financial reporting and disclosure controls and procedures frameworks provide internal control over financial reporting and disclosure. Due to its inherent limitations, internal control over financial reporting and disclosure may not prevent or detect all misstatements. Further, the effectiveness of internal control is subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with policies or procedures may change.

There were no changes in the Company's internal control over financial reporting during the year ended December 31, 2025 that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting.

The management of Barrick, at the direction of our Group Chief Operating Officer and Interim President and Chief Executive Officer, and Senior Executive Vice-President and Chief Financial Officer, evaluated the effectiveness of the design and operation of internal control over financial reporting as of the end of the period covered by this report based on the framework and criteria established in Internal Control – Integrated Framework (2013) as issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on that evaluation, management concluded that the Company's internal control over financial reporting was effective as at December 31, 2025.

Barrick's annual management report on internal control over financial reporting and the integrated audit report of Barrick's auditors for the year ended December 31, 2025 will be included in Barrick's 2025 Annual Report and its 2025 Form 40-F/Annual Information Form to be filed with the US Securities and Exchange Commission and Canadian provincial securities regulatory authorities.

IFRS CRITICAL ACCOUNTING POLICIES AND ACCOUNTING ESTIMATES

Management has discussed the development and selection of our critical accounting estimates with the Audit & Risk Committee of the Board of Directors, and the Audit & Risk Committee has reviewed the disclosure relating to such estimates in conjunction with its review of this MD&A. The accounting policies and methods we utilize determine how we report our financial condition and results of operations, and they may require management to make estimates or rely on assumptions about matters that are inherently uncertain. The consolidated financial statements have been prepared in accordance with IFRS. Our material accounting policies are disclosed in note 2 to the Financial Statements, including a summary of current and future changes in accounting policies.

Critical Accounting Estimates and Judgments

Certain accounting estimates have been identified as being "critical" to the presentation of our financial condition and results of operations because they require us to make subjective and/or complex judgments about matters that are inherently uncertain; or there is a reasonable likelihood that materially different amounts could be reported under different conditions or using different assumptions and estimates. Our significant accounting judgments, estimates and assumptions are disclosed in note 3 to the accompanying Financial Statements.

NON-GAAP FINANCIAL MEASURES

Adjusted Net Earnings and Adjusted Net Earnings per Share

Adjusted net earnings is a non-GAAP financial measure which excludes the following from net earnings:

- Impairment charges (reversals) related to intangibles, goodwill, property, plant and equipment, and investments;
- Acquisition/disposition gains/losses;
- Foreign currency translation gains/losses;
- Significant tax adjustments;
- Other items that are not indicative of the underlying operating performance of our core mining business; and
- Tax effect and non-controlling interest of the above items.

Management uses this measure internally to evaluate our underlying operating performance for the reporting periods presented and to assist with the planning and forecasting of future operating results. Management believes that adjusted net earnings is a useful measure of our performance because impairment charges, acquisition/disposition gains/losses and significant tax adjustments do not reflect the underlying operating performance of our core mining business and are not necessarily indicative of future operating results. Furthermore, foreign currency translation gains/losses are not necessarily reflective of the underlying operating results for the reporting periods presented. The tax effect and non-controlling interest of the adjusting items are also excluded to reconcile the amounts to Barrick's share on a post-tax basis, consistent with net earnings.

As noted, we use this measure for internal purposes. Management's internal budgets and forecasts and public guidance do not reflect the types of items we adjust for. Consequently, the presentation of adjusted

net earnings enables investors and analysts to better understand the underlying operating performance of our core mining business through the eyes of management. Management periodically evaluates the components of adjusted net earnings based on an internal assessment of performance measures that are useful for evaluating the operating performance of our business segments and a review of the non-GAAP financial measures used by mining industry analysts and other mining companies.

Adjusted net earnings is intended to provide additional information only and does not have any standardized definition under IFRS and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. The measures are not necessarily indicative of operating profit or cash flow from operations as determined under IFRS. Other companies may calculate these measures differently. The following table reconciles these non-GAAP financial measures to the most directly comparable IFRS measure.

Reconciliation of Net Earnings to Net Earnings per Share, Adjusted Net Earnings and Adjusted Net Earnings per Share

(\$ millions, except per share amounts in dollars)	For the three months ended		For the years ended		
	12/31/25	9/30/25	12/31/25	12/31/24	12/31/23
Net earnings attributable to equity holders of the Company	2,406	1,302	4,993	2,144	1,272
Impairment (reversals) charges related to non-current assets ^a	5	3	12	(457)	312
Acquisition/disposition gains ^b	(1,146)	(250)	(1,107)	(24)	(364)
Loss on currency translation	6	(3)	3	39	93
Significant tax adjustments ^c	80	(119)	(89)	137	220
Other expense adjustments ^d	559	47	823	249	96
Non-controlling interest ^e	(101)	0	(116)	(170)	(98)
Tax effect ^e	(55)	2	(380)	295	(64)
Adjusted net earnings	1,754	982	4,139	2,213	1,467
Net earnings per share ^f	1.43	0.76	2.93	1.22	0.72
Adjusted net earnings per share ^f	1.04	0.58	2.42	1.26	0.84

- There were no significant impairment charges or reversals in 2025. Net impairment reversals for 2024 mainly relate to long-lived asset impairment reversals at Lumwana and Veladero, partially offset by a goodwill impairment at Loulo-Goukoto.
- Acquisition/disposition gains for 2025 relate to gain on sale of our 50% interest in the Donlin Gold project in Q2 2025, and sale of our Hemlo gold mine, our interest in the Tongon gold mine and the Alturas project, all occurring in Q4 2025. Q4 2025 was further impacted by the accounting impact of regaining control of the Loulo-Goukoto complex on December 16, 2025, which largely offset the losses recognized earlier in 2025 relating to the deconsolidation and recognition of an investment at fair value following the change of control after it was placed under a temporary provisional administration on June 16, 2025. The acquisition/disposition gains in Q3 2025 mainly related to the revaluation of our 80% equity investment in Loulo-Goukoto, as it was deconsolidated and an investment at fair value was recognized in Q2 2025, as described above.
- Significant tax adjustments in Q4 2025 include the resolution of uncertain tax positions, the impact of prior year adjustments and the recognition of deferred tax assets. Significant tax adjustments in 2025 primarily relate to the foreign currency remeasurement of tax balances, the resolution of uncertain tax positions and the recognition of deferred tax assets. For Q3 2025, significant tax adjustments include the foreign currency remeasurement of deferred tax balances and the recognition of deferred tax assets. Significant tax adjustments for 2024 primarily relate to the resolution of uncertain tax positions; the impact of prior year adjustments; the impact of nondeductible foreign exchange losses; and the recognition and derecognition of deferred tax assets.
- Other expense adjustments for Q4 2025 and 2025 mainly relate to the settlement payment to the Government of Mali in November 2025 and the fair value increment on inventory resulting from the purchase price allocation when we regained control of Loulo-Goukoto. 2025 was further impacted by reduced operations costs at Loulo-Goukoto. Other expense adjustments for 2024 mainly relate to a payment to the Government of Mali to advance negotiations, a customs and royalty settlement at Tongon, interest and penalties recognized following the settlement of the Zaldívar Tax Assessments in Chile, a provision made relating to a legacy mine site operated by Homestake Mining Company that was closed prior to the 2001 acquisition by Barrick, and an accrual relating to the road construction in Tanzania per our community investment obligations under the Twiga partnership.
- Non-controlling interest for 2025 primarily relates to other expense adjustments and tax effect for 2025 primarily relates to acquisition/disposition gains.
- Calculated using weighted average number of shares outstanding under the basic method of earnings per share.

Free Cash Flow and Attributable Free Cash Flow

Free cash flow is a non-GAAP financial measure that deducts capital expenditures from net cash provided by operating activities. Attributable free cash flow starts with free cash flow and adds our attributable share of free cash flow from our equity investees and subtracts the free cash flow attributable to the non-controlling interests. Management believes these to be useful indicators of our ability to operate without reliance on additional borrowing or usage of existing cash.

Free cash flow and attributable free cash flow are intended to provide additional information only and do not have any standardized definition under IFRS, and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. These measures are not necessarily indicative of operating profit or cash flow from operations as determined under IFRS. Other companies may calculate these measures differently. The following table reconciles this non-GAAP financial measure to the most directly comparable IFRS measure.

Reconciliation of Net Cash Provided by Operating Activities to Free Cash Flow and Attributable Free Cash Flow

(\$ millions)	For the three months ended		For the years ended		
	12/31/25	9/30/25	12/31/25	12/31/24	12/31/23
Net cash provided by operating activities	2,726	2,422	7,689	4,491	3,732
Capital expenditures	(1,107)	(943)	(3,821)	(3,174)	(3,086)
Consolidated free cash flow	1,619	1,479	3,868	1,317	646
Free cash flow applicable to equity investees	172	191	585	553	465
Non-controlling interests	(731)	(516)	(1,616)	(779)	(712)
Attributable free cash flow	1,060	1,154	2,837	1,091	399

Capital Expenditures

Capital expenditures are classified into minesite sustaining capital expenditures or project capital expenditures depending on the nature of the expenditure. Minesite sustaining capital expenditures is the capital spending required to support current production levels. Project capital expenditures represent the capital spending at new projects and major, discrete projects at existing operations intended to increase net present value through higher production or longer mine life. Management believes this to be a useful indicator of the purpose of capital expenditures and this distinction is an input into the calculation of all-in sustaining costs per ounce/pound.

Classifying capital expenditures is intended to provide additional information only and does not have any standardized definition under IFRS, and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. Other companies may calculate these measures differently. The following table reconciles these non-GAAP financial measures to the most directly comparable IFRS measure.

Reconciliation of the Classification of Capital Expenditures

(\$ millions)	For the three months ended		For the years ended		
	12/31/25	9/30/25	12/31/25	12/31/24	12/31/23
Minesite sustaining capital expenditures	458	395	1,896	2,217	2,076
Project capital expenditures	630	532	1,870	924	969
Capitalized interest	19	16	55	33	41
Total consolidated capital expenditures	1,107	943	3,821	3,174	3,086

Total cash costs per ounce, All-in sustaining costs per ounce, C1 cash costs per pound and All-in sustaining costs per pound

TCC/oz and AISC/oz are non-GAAP financial measures which are calculated based on the definition published by the WGC (a market development organization for the gold industry comprised of and funded by gold mining companies from around the world, including Barrick). The WGC is not a regulatory organization. Management uses these measures to monitor the performance of our gold mining operations and its ability to generate positive cash flow, both on an individual site basis and an overall gold operations basis.

TCC/oz start with our cost of sales related to gold production and removes depreciation, the non-controlling interest of cost of sales and costs allocated to by-products. AISC/oz start with TCC/oz and includes sustaining capital expenditures, sustaining leases, general and administrative costs, minesite exploration and evaluation costs related to the current mine plan and reclamation cost accretion and amortization. These additional costs reflect the expenditures made to maintain current production levels.

We believe that our use of TCC/oz and AISC/oz will assist analysts, investors and other stakeholders of Barrick in understanding the costs associated with producing gold, understanding the economics of gold mining, assessing our operating performance and also our ability to generate free cash flow from the gold operations portion of our business. Due to the capital-intensive nature of the industry and the long useful lives over which these items are depreciated, there can be a significant timing difference between net earnings calculated in accordance with IFRS and the amount of free cash flow that is generated by a mine and therefore we believe these measures are useful non-GAAP operating metrics and supplement our IFRS disclosures. These measures are not representative of all of our cash expenditures as they do not include income tax payments, interest costs or dividend payments. These measures do not include depreciation or amortization.

TCC/oz and AISC/oz are intended to provide additional information only and do not have standardized definitions under IFRS and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. These measures are not equivalent to net income or cash flow from operations as determined under IFRS. Although the WGC has published a standardized definition, other companies may calculate these measures differently.

C1 cash costs/lb and AISC/lb are non-GAAP financial measures related to our copper mine operations. We believe that C1 cash costs/lb enables investors to better understand the performance of our copper operations in comparison to other copper producers who present results on a similar basis. C1 cash costs/lb excludes royalties and production taxes and non-routine charges as they are not direct production costs. AISC/lb is similar to the gold AISC metric and management uses this to better evaluate the costs of copper production. We believe this measure enables investors to better understand the operating performance of the copper portion of our business as this measure reflects all of the sustaining expenditures incurred in order to produce copper. AISC/lb includes C1 cash costs, sustaining capital expenditures, sustaining leases, general and administrative costs, minesite exploration and evaluation costs, royalties and production taxes, reclamation cost accretion and amortization and write-downs taken on inventory to net realizable value.

Reconciliation of Gold Cost of Sales to Total cash costs and All-in sustaining costs, including on a per ounce basis

(\$ millions, except per ounce information in dollars)	Footnote	For the three months ended		For the years ended		
		12/31/25	9/30/25	12/31/25	12/31/24	12/31/23

TCC/oz	i	1,205	1,137	1,199	1,065	960
AISC/oz	i	1,581	1,538	1,637	1,484	1,335

a. **Other** – Other adjustments for Q4 2025 and 2025 include the removal of the fair value increment on inventory resulting from the purchase price allocation when we regained control of Loulo-Goukoto of \$283 million and \$283 million, respectively (Q3 2025: \$nil; 2024: \$nil; 2023: \$nil).

b. **Non-controlling interests** – Non-controlling interests include non-controlling interests related to gold production of \$741 million and \$2,308 million, respectively, for Q4 2025 and 2025; (Q3 2025: \$540 million; 2024: \$2,189 million; 2023: \$2,192 million). Non-controlling interests include NGM, Pueblo Viejo, Loulo-Goukoto, Tongon up until its sale on December 1, 2025, North Mara and Bulyanhulu. Refer to note 5 to the Financial Statements for further information.

c. **Exploration and evaluation costs** – Exploration, evaluation and project expenses are presented as minesite sustaining if it supports current mine operations and project if it relates to future projects. Refer to page 46 of this MD&A.

d. **Capital expenditures** – Capital expenditures are related to our gold sites only and are split between minesite sustaining and project capital expenditures.

e. **Rehabilitation** – accretion and amortization – Includes depreciation on the assets related to rehabilitation provisions of our gold operations and accretion on the rehabilitation provisions of our gold operations, split between operating and non-operating sites.

f. **Non-controlling interest and copper operations** – Removes general & administrative costs related to non-controlling interests and copper based on a percentage allocation of revenue. Also removes exploration, evaluation and project expenses, rehabilitation costs and capital expenditures incurred by our copper sites and the non-controlling interests of NGM, Pueblo Viejo, Loulo-Goukoto, Tongon up until its sale on December 1, 2025, North Mara and Bulyanhulu operating segments. It also includes capital expenditures applicable to our equity method investments in Kibali and Porgera. Figures remove the impact of Pierina up until December 31, 2023. The impact is summarized as the following:

(\$ millions)	For the three months ended		For the years ended		
	12/31/25	9/30/25	12/31/25	12/31/24	12/31/23
Non-controlling interest, copper operations and other					
General & administrative costs	(10)	(13)	(35)	(14)	(9)
Minesite exploration and evaluation costs	(3)	(1)	(7)	(10)	(14)
Rehabilitation – accretion and amortization (operating sites)	(5)	(5)	(21)	(21)	(21)
Minesite sustaining capital expenditures	(173)	(152)	(724)	(829)	(780)
All-in sustaining costs total	(191)	(171)	(787)	(874)	(824)

g. **Ounces sold – attributable basis** – Excludes Pierina, which was producing incidental ounces until December 31, 2023 while in closure. It also excludes Long Canyon which is producing residual ounces from the leach pad while in care and maintenance.

h. **COS/oz** – Gold COS/oz is calculated as cost of sales across our gold operations (excluding sites in closure or care and maintenance) divided by ounces sold (both on an attributable basis using Barrick's ownership share).

i. **Per ounce figures** – COS/oz, TCC/oz and AISC/oz may not calculate based on amounts presented in this table due to rounding.

a. These results represent our 61.5% interest in Carlin, Cortez, Turquoise Ridge, Phoenix and Long Canyon until it transitioned to care and maintenance at the end of 2023, as previously reported.

b. On September 10, 2025, we reached an agreement to sell the Hemlo gold mine to Carcetti Capital Corp. for gross proceeds of up to \$1.09 billion. The transaction closed on November 26, 2025. Accordingly, operating and financial results provided are up to the closing date.

c. **Other** – Other adjustments at Loulo-Goukoto include the removal of the fair value increment on inventory resulting from the purchase price allocation when we regained control. Other adjustments at Carlin include the removal of TCC and costs to produce by-products associated with Emigrant, which is producing incidental ounces.

- d. Exploration and evaluation costs** – Exploration, evaluation and project expenses are presented as minesite sustaining if it supports current mine operations and project if it relates to future projects. Refer to page 46 of this MD&A.
-
- e. Capital expenditures** – Capital expenditures are related to our gold sites only and are split between minesite sustaining and project capital expenditures.
-
- f. Rehabilitation – accretion and amortization** – Includes depreciation on the assets related to rehabilitation provisions of our gold operations and accretion on the rehabilitation provision of our gold operations, split between operating and non-operating sites.
-
- g. COS/oz** – Gold COS/oz is calculated as cost of sales across our gold operations (excluding sites in closure or care and maintenance) divided by ounces sold (both on an attributable basis using Barrick's ownership share).
-
- h. Per ounce figures** – COS/oz, TCC/oz and AISC/oz may not calculate based on amounts presented in this table due to rounding.
-
- i.** As Porgera was placed on care and maintenance from April 25, 2020 until December 22, 2023, no operating data or per ounce data has been provided from Q3 2020 to Q4 2023. On December 22, 2023, we completed the Commencement Agreement, pursuant to which the PNG government and BNL, the 95% owner and operator of the Porgera joint venture, agreed on a partnership for the future ownership and operation of the mine. Ownership of Porgera is held in a joint venture owned 51% by PNG stakeholders and 49% by a Barrick affiliate, PJL. PJL is jointly owned on a 50/50 basis by Barrick and Zijin Mining Group and therefore Barrick now holds a 24.5% ownership interest in the Porgera joint venture. Barrick holds a 23.5% interest in the economic benefits of the mine under the economic benefit sharing arrangement agreed with the PNG government whereby Barrick and Zijin Mining Group together share 47% of the overall economic benefits derived from the mine accumulated over time, and the PNG stakeholders share the remaining 53%.
-
- j.** As a result of temporary suspension of operations at Loulo-Goukoto starting January 14, 2025, and subsequent loss of control on June 16, 2025, no operating data or per ounce data was provided for Q1 2025 to Q3 2025. On November 24, 2025, Barrick announced that an agreement had been entered into with the Government of the Republic of Mali to put an end to all disputes regarding the Loulo and Goukoto mines. The provisional administration of the Loulo-Goukoto complex was terminated on December 16, 2025, at which point operational control was handed back to Somilo and Goukoto's management.
-
- k.** On October 6, 2025, we reached an agreement to sell our interest in the Tongon gold mine and certain of its exploration properties to the Atlantic Group for total consideration of up to \$305 million. The transaction closed on December 1, 2025. Accordingly, operating and financial results provided are up to the closing date.
-
- l.** Starting Q1 2024, we have ceased to include production or non-GAAP cost metrics for Long Canyon as it was placed on care and maintenance at the end of 2023, as previously reported.
-

a. COS/lb, C1 cash costs/lb and AISC/lb may not calculate based on amounts presented in this table due to rounding.

b. Copper COS/lb is calculated as cost of sales across our copper operations divided by pounds sold (both on an attributable basis using Barrick's ownership share).

EBITDA, Adjusted EBITDA, Attributable EBITDA, Attributable EBITDA Margin and Net Leverage

EBITDA is a non-GAAP financial measure, which excludes the following from net earnings:

- Income tax expense;
- Finance costs;
- Finance income; and
- Depreciation.

Management believes that EBITDA is a valuable indicator of our ability to generate liquidity by producing operating cash flow to fund working capital needs, service debt obligations, and fund capital expenditures. Management uses EBITDA for this purpose. EBITDA is also frequently used by investors and analysts for valuation purposes whereby EBITDA is multiplied by a factor or "EBITDA multiple" that is based on an observed or inferred relationship between EBITDA and market values to determine the approximate total enterprise value of a company.

Adjusted EBITDA removes the effect of impairment charges; acquisition/disposition gains/losses; foreign currency translation gains/losses; and other expense adjustments. We also remove the impact of the income tax expense, finance costs, finance income and depreciation incurred in our equity method accounted investments. Attributable EBITDA further removes the non-controlling interest portion. We believe these items provide a greater level of consistency with the adjusting items included in our adjusted net earnings reconciliation, with the exception that these amounts are adjusted to remove any impact on finance costs/income, income tax expense and/or depreciation as they do not affect EBITDA. We believe this additional information will

assist analysts, investors and other stakeholders of Barrick in better understanding our ability to generate liquidity from our attributable business, including equity method investments, by excluding these amounts from the calculation as they are not indicative of the performance of our core mining business and do not necessarily reflect the underlying operating results for the periods presented. Additionally, it is aligned with how we present our forward-looking guidance on gold ounces and copper pounds produced.

Attributable EBITDA margin is calculated as attributable EBITDA divided by revenues – as adjusted. We believe this ratio will assist analysts, investors and other stakeholders of Barrick to better understand the relationship between revenues and EBITDA or operating profit.

Net leverage is calculated as debt, net of cash divided by the sum of adjusted EBITDA of the last four consecutive quarters. We believe this ratio will assist analysts, investors and other stakeholders of Barrick in monitoring our leverage and evaluating our balance sheet.

EBITDA, adjusted EBITDA, attributable EBITDA, attributable EBITDA margin and net leverage are intended to provide additional information to investors and analysts and do not have any standardized definition under IFRS, and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. EBITDA, adjusted EBITDA and attributable EBITDA exclude the impact of cash costs of financing activities and taxes, and the effects of changes in operating working capital balances, and therefore are not necessarily indicative of operating profit or cash flow from operations as determined under IFRS. Other companies may calculate EBITDA, adjusted EBITDA, attributable EBITDA, attributable EBITDA margin and net leverage differently.

Net leverage ^g			-0.2:1	0.1:1	0.1:1

a. Finance costs exclude accretion.

b. There were no significant impairment charges or reversals in 2025. Net impairment reversals for 2024 mainly relate to long-lived asset impairment reversals at Lumwana and Veladero, partially offset by a goodwill impairment at Loulo-Goukoto.

c. Acquisition/disposition gains for 2025 relate to gain on sale of our 50% interest in the Donlin Gold project in Q2 2025, and sale of our Hemlo gold mine, our interest in the Tongon gold mine and the Alturas project, all occurring in Q4 2025. Q4 2025 was further impacted by the accounting impact of regaining control of the Loulo-Goukoto complex on December 16, 2025, which largely offset the losses recognized earlier in 2025 relating to the deconsolidation and recognition of an investment at fair value following the change of control after it was placed under a temporary provisional administration on June 16, 2025. The acquisition/disposition gains in Q3 2025 mainly related to the revaluation of our 80% equity investment in Loulo-Goukoto, as it was deconsolidated and an investment at fair value was recognized in Q2 2025, as described above.

d. Other expense adjustments for Q4 2025 and 2025 mainly relate to the settlement payment to the Government of Mali in November 2025 and the fair value increment on inventory resulting from the purchase price allocation when we regained control of Loulo-Goukoto. 2025 was further impacted by reduced operations costs at Loulo-Goukoto. Other expense adjustments for 2024 mainly relate to a payment to the Government of Mali to advance negotiations, a customs and royalty settlement at Tongon, interest and penalties recognized following the settlement of the Zaldivar Tax Assessments in Chile, a provision made relating to a legacy mine site operated by Homestake Mining Company that was closed prior to the 2001 acquisition by Barrick, and an accrual relating to the road construction in Tanzania per our community investment obligations under the Twiga partnership.

e. Refer to Reconciliation of Sales to Realized Price per pound/ounce on page 67 of this MD&A.

f. Represents attributable EBITDA divided by revenues – as adjusted.

g. Represents debt, net of cash divided by adjusted EBITDA of the last four consecutive quarters.

Realized Price

Realized price is a non-GAAP financial measure which excludes from sales:

- Treatment and refining charges; and
- Cumulative catch-up adjustment to revenue relating to our streaming arrangements.

We believe this provides investors and analysts with a more accurate measure with which to compare to market gold and copper prices and to assess our gold and copper sales performance. For those reasons, management believes that this measure provides a more accurate reflection of our Company's past performance and is a better indicator of its expected performance in future periods.

The realized price measure is intended to provide additional information, and does not have any standardized definition under IFRS and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. The measure is not necessarily indicative of sales as determined under IFRS. Other companies may calculate this measure differently. The following table reconciles realized prices to the most directly comparable IFRS measure.

Reconciliation of Sales to Realized Price per ounce/pound

(\$ millions, except per ounce/pound information in dollars)	For the three months ended				For the years ended					
	Gold		Copper		Gold			Copper		
	12/31/25	9/30/25	12/31/25	9/30/25	12/31/25	12/31/24	12/31/23	12/31/25	12/31/24	12/31/23
Sales	5,353	3,748	514	320	15,147	11,820	10,350	1,475	855	795
Sales applicable to non-controlling interests	(1,756)	(1,237)	0	0	(4,895)	(3,579)	(3,179)	0	0	0
Sales applicable to equity method investments ^{a,b}	418	377	233	147	1,353	849	667	679	603	587

Revenues – as adjusted	4,010	2,894	800	511	11,617	9,104	7,838	2,333	1,620	1,573
Ounces/pounds sold (000s ounces/millions pounds) ^e	960	837	147	116	3,318	3,798	4,024	494	391	408
Realized gold/copper price per ounce/pound ^e	4,177	3,457	5.42	4.39	3,501	2,397	1,948	4.72	4.15	3.85

a. Represents sales of \$327 million and \$1,038 million, respectively, for Q4 2025 and 2025 (Q3 2025: \$294 million; 2024: \$741 million; 2023: \$667 million) applicable to our 45% equity method investment in Kibali and \$91 million and \$315 million, respectively (Q3 2025: \$83 million; 2024: \$108 million; 2023: \$nil) applicable to our 24.5% equity method investment in Porgera for gold. Represents sales of \$151 million and \$394 million, respectively, for Q4 2025 and 2025 (Q3 2025: \$77 million; 2024: \$357 million; 2023: \$253 million) applicable to our 50% equity method investment in Zaldívar and \$83 million and \$291 million, respectively (Q3 2025: \$71 million; 2024: \$270 million; 2023: \$253 million) applicable to our 50% equity method investment in Jabal Sayid for copper.

b. Sales applicable to equity method investments are net of treatment and refinement charges.

c. On an attributable basis. Excludes Pierina, which was producing incidental ounces until December 31, 2023 while in closure. It also excludes Long Canyon which is producing residual ounces from the leach pad while in care and maintenance.

d. Represents cumulative catch-up adjustment to revenue relating to our streaming arrangements. Refer to note 2e to the Financial Statements for more information.

e. Realized price per ounce/pound may not calculate based on amounts presented in this table.

TECHNICAL INFORMATION

The scientific and technical information contained in this MD&A has been reviewed and approved by Tricia Evans, BSc, SMERM, Mineral Resource Manager: North America; Mark Roux, BSc (Hons), P. Grad. Cert. (Geostatistics), Pr. Sci. Nat, Resource Geology Lead – North America; Richard Peattie, MPhil, FAusIMM, Mineral Resources Manager: Africa and Middle East; Peter Jones, MAIG, Manager Resource Geology – South America & Asia Pacific; and Joel Holliday, FAusIMM, Executive Vice-President, Exploration – each a “Qualified Person” as defined in National Instrument 43-101 – *Standards of Disclosure for Mineral Projects*.

All mineral reserve and mineral resource estimates are estimated in accordance with National Instrument 43-101 – *Standards of Disclosure for Mineral Projects*. Unless otherwise noted, such mineral reserve and mineral resource estimates are as of December 31, 2025.

ENDNOTES

- 1 A Tier One Gold Asset is an asset with a \$1,400/oz reserve with potential to deliver a minimum 10-year life, annual production of at least 500,000 ounces of gold and with costs per ounce in the lower half of the industry cost curve. Tier One Assets must be located in a world-class geological district with potential for organic reserve growth and long-term geologically driven addition.
- 2 A Tier Two Gold Asset is an asset with a reserve with potential to deliver a minimum 10-year life, annual production of at least 250,000 ounces of gold and TCC/oz over the mine life that are in the lower half of the industry cost curve.
- 3 A Tier One Copper Asset/Project is an asset with a \$3.00/lb reserve with potential for +5Mt contained copper in support of at least 20 years life, annual production of at least 200ktpa, with costs per pound in the lower half of the industry cost curve.
- 4 A Strategic Asset is an asset, which in the opinion of Barrick, has the potential to deliver significant unrealized value in the future.
- 5 Currently consists of Barrick's Lumwana mine, Zaldívar and Jabal Sayid joint ventures, and Reko Diq project.
- 6 Further information on these non-GAAP financial measures, including detailed reconciliations, is included on pages 54 to 67 of this MD&A.
- 7 Gold COS/oz is calculated as cost of sales across our gold operations (excluding sites in closure or care and maintenance) divided by ounces sold (both on an attributable basis using Barrick's ownership share). Copper COS/lb is calculated as cost of sales across our copper operations divided by pounds sold (both on an attributable basis using Barrick's ownership share).
- 8 TRIFR is a ratio calculated as follows: number of reportable injuries x 1,000,000 hours divided by the total number of hours worked. Reportable injuries include fatalities, lost time injuries, restricted duty injuries, and medically treated injuries. LTIFR is a ratio calculated as follows: number of lost time injuries x 1,000,000 hours divided by the total number of hours worked.
- 9 Class 1 – High Significance is defined as an incident that causes significant negative impacts on human health or the environment or an incident that extends onto publicly accessible land and has the potential to cause significant adverse impact to surrounding communities, livestock or wildlife.
- 10 Categories as defined in the Greenhouse Gas Protocol's Technical Guidance for Calculating Scope 3 Emissions. Achievement of Barrick's Scope 3 targets will require collaboration with suppliers and customers in our value chain, which are outside of Barrick's direct control.
- 11 Preliminary figures and subject to external assurance.
- 12 All mineral resource and mineral reserve estimates of tonnes, Au oz, Ag oz and Cu Mt are reported to the second significant digit. All measured and indicated mineral resource estimates of grade and all proven and probable mineral reserve estimates of grade for Au g/t, Ag g/t and Cu % are reported to two decimal places. All inferred mineral resource estimates of grade for Au g/t, Ag g/t and Cu % are reported to one decimal place. 2025 polymetallic mineral resources and mineral reserves are estimated using the combined value of gold, copper & silver and accordingly are reported as gold, copper & silver mineral resources and mineral reserves.
- 13 Estimated in accordance with National Instrument 43-101 – *Standards of Disclosure for Mineral Projects* as required by Canadian securities regulatory authorities. Estimates are as of December 31, 2025, unless otherwise noted. Proven reserves of 390 million tonnes grading 1.38 g/t, representing 17 million ounces of gold, and 520 million tonnes grading 0.38%, representing 2.0 million tonnes of copper. Probable reserves of 2,300 million tonnes grading 0.91 g/t, representing 68 million ounces of gold, and 3,400 million tonnes grading 0.47%, representing 16 million tonnes of copper. Measured resources of 570 million tonnes grading 1.45 g/t, representing 26 million ounces of gold, and 740 million tonnes grading 0.36%, representing 2.7 million tonnes of copper. Indicated resources of 4,200 million tonnes grading 0.95 g/t, representing 130 million ounces of gold, and 5,300 million tonnes grading 0.40%, representing 21 million tonnes of copper. Inferred resources of 1,300 million tonnes grading 1.0 g/t, representing 43 million ounces of gold, and 1,400 million tonnes grading 0.3%, representing 4.2 million tonnes of copper. Totals may not appear to sum correctly due to rounding. Complete mineral reserve and mineral resource data for all mines and projects referenced in this MD&A, including tonnes, grades, and ounces, can be found on pages 73-81 of Barrick's Annual Report 2025.

- 14 Estimated in accordance with National Instrument 43-101 – *Standards of Disclosure for Mineral Projects* as required by Canadian securities regulatory authorities. Estimates are as of December 31, 2024, unless otherwise noted. Proven reserves of 270 million tonnes grading 1.75 g/t, representing 15 million ounces of gold, and 380 million tonnes grading 0.42%, representing 1.6 million tonnes of copper. Probable reserves of 2,500 million tonnes grading 0.90 g/t, representing 74 million ounces of gold, and 3,600 million tonnes grading 0.46%, representing 17 million tonnes of copper. Measured resources of 450 million tonnes grading 1.68 g/t, representing 24 million ounces of gold, and 600 million tonnes grading 0.38%, representing 2.3 million tonnes of copper. Indicated resources of 4,800 million tonnes grading 1.01 g/t, representing 150 million ounces of gold, and 5,400 million tonnes grading 0.39%, representing 22 million tonnes of copper. Inferred resources of 1,400 million tonnes grading 0.9 g/t, representing 41 million ounces of gold, and 1,300 million tonnes grading 0.3%, representing 3.9 million tonnes of copper. Totals may not appear to sum correctly due to rounding. Complete 2024 mineral reserve and mineral resource data for all mines and projects referenced in this MD&A, including tonnes, grades, and ounces, can be found on pages 32-45 of Barrick's Annual Information Form/Form 40-F for the year ended December 31, 2024 on file with Canadian provincial securities regulatory authorities and the U.S. Securities and Exchange Commission.
- 15 Reserve replacement measures attributable reserve gains in ounces or gold equivalent ounces^a calculated from the cumulative net change in attributable reserve in ounces or gold equivalent ounces^a, respectively, from the most recently completed three years (excluding any attributable acquisitions or divestments).

The three-year rolling average gold mineral reserve replacement percentage is calculated from the cumulative net change in attributable reserves in ounces from the three most recently completed years divided by the cumulative depletion in attributable reserve in ounces from the three most recently completed years as set forth in the table below (excluding attributable acquisitions and divestments).^b

The three-year average gold equivalent replacement percentage is calculated from the cumulative net change in attributable reserves in gold equivalent ounces^a from the three most recently completed years divided by the cumulative depletion in attributable reserve in gold equivalent ounces^a from the three most recently completed years as set forth in the table below (excluding attributable acquisitions and divestments):^b

Year	Attributable P&P Gold (Moz)	Attributable P&P Gold Depletion (Moz)	Attributable P&P Gold Net Change (Moz)	Attributable P&P (GEO ^a)	Attributable P&P Depletion (GEO ^a)	Attributable P&P Net Change GEO (using reported reserve prices) ^a
2023 ^c	77	(4.6)	5	105	(6.0)	6.7
2024 ^d	89	(4.6)	17	176	(6.1)	79
2025 ^e	85	(3.7)	1.8	171	(5.1)	1.4
2023 – 2025 Total ^f	N/A	(12.9)	23.8	N/A	(17.2)	87

a Gold equivalent ounces calculated from our copper assets are calculated using long-term mineral reserve commodity prices of (i) \$1,500/oz gold and \$3.25/lb copper for 2025, (ii) \$1,400/oz gold and \$3.00/lb copper for 2024, and (iii) \$1,300/oz gold and \$3.00/lb copper for 2023. All gold equivalent ounces are reported to the second significant digit.

b Complete mineral reserves and mineral resource data for all mines and projects, including tonnes, grades, and ounces, can be found in the Mineral Reserves and Mineral Resources Tables included in pages 73 to 81 of Barrick's Annual Report 2025. All estimates are estimated in accordance with National Instrument 43-101 – *Standards of Disclosure for Mineral Projects* as required by Canadian securities regulatory authorities.

c Estimates are as of December 31, 2023. Proven mineral reserves of 250 million tonnes grading 1.85g/t, representing 15 million ounces of gold, and 320 million tonnes grading 0.41%, representing 1.3 million tonnes of copper. Probable reserves of 1,200 million tonnes grading 1.61g/t, representing 61 million ounces of gold, and 1,100 million tonnes grading 0.38%, representing 4.3 million tonnes of copper.

d Estimates are as of December 31, 2024. Proven mineral reserves of 270 million tonnes grading 1.75g/t, representing 15 million ounces of gold, and 380 million tonnes grading 0.42%, representing 1.6 million tonnes of copper. Probable reserves of 2,500 million tonnes grading 0.90g/t, representing 74 million ounces of gold, and 3,600 million tonnes grading 0.46%, representing 17 million tonnes of copper.

e Estimates are as of December 31, 2025. Proven mineral reserves of 390 million tonnes grading 1.38g/t, representing 17 million ounces of gold, and 520 million tonnes grading 0.38%, representing 2.0 million tonnes of copper. Probable reserves of 2,300 million tonnes grading 0.91g/t, representing 68 million ounces of gold, and 3,900 million tonnes grading 0.46%, representing 18 million tonnes of copper.

f Totals may not appear to sum correctly due to rounding.

a. All intercepts calculated using a 3.4 g/t Au cutoff and are uncapped; minimum downhole intercept width is 2.4 meters; internal dilution is less than 20% total width.

b. Fourmile drill hole nomenclature: Project area (FM – Fourmile) followed by the year (25 for 2025) then hole number.

c. True width (TW) for FM drillholes has been estimated based on the latest geological and ore controls model and it is subject to refinement as additional data becomes available.

The drilling results for Fourmile contained in this MD&A have been prepared in accordance with National Instrument 43-101 – *Standards of Disclosure for Mineral Projects*. All drill hole assay information has been manually reviewed and approved by staff geologists and re-checked by the project manager. Sample preparation and analyses are conducted by an independent laboratory, ALS Minerals. Procedures are employed to ensure security of samples during their delivery from the drill rig to the laboratory. The quality assurance procedures, data verification and assay protocols used in connection with drilling and sampling on Fourmile conform to industry accepted quality control methods.

17 See the Technical Report on the Cortez Complex, Lander and Eureka Counties, State of Nevada, USA, dated December 31, 2021, and filed on SEDAR+ at www.sedarplus.ca and EDGAR at www.sec.gov on March 18, 2022.

The drilling results for Goldrush contained in this MD&A have been prepared in accordance with National Instrument 43-101 – *Standards of Disclosure for Mineral Projects*. All drill hole assay information has been manually reviewed and approved by staff geologists and re-checked by the project manager. Sample preparation and analyses are conducted by an independent laboratory, ALS Minerals. Procedures are employed to ensure security of samples during their delivery from the drill rig to the laboratory. The quality assurance procedures, data verification and assay protocols used in connection with drilling and sampling on Goldrush conform to industry accepted quality control methods.

- 19 Refer to the Technical Report on the Carlin Complex, Eureka and Elko County, Nevada, USA, dated March 14, 2025, and filed on SEDAR+ at www.sedarplus.ca and EDGAR at www.sec.gov on March 14, 2025.
- 20 See the Technical Report on the Pueblo Viejo mine, Dominican Republic, dated March 17, 2023, and filed on SEDAR+ at www.sedarplus.ca and EDGAR at www.sec.gov on March 17, 2023.
- 21 Refer to the Technical Report on the Reko Diq Project, Balochistan, Pakistan, dated February 19, 2025, and filed on SEDAR+ at www.sedarplus.ca and EDGAR at www.sec.gov on February 19, 2025.
- 22 Estimated in accordance with National Instrument 43-101 – *Standards of Disclosure for Mineral Projects* as required by Canadian securities regulatory authorities. Estimates are as of December 31, 2024, unless otherwise noted. Reko Diq probable reserves of 1,400 million tonnes grading 0.28 g/t representing 13 million ounces of gold, probable reserves of 1,500 million tonnes grading 0.48% representing 7.3 million tonnes of copper, indicated resources of 1,800 million tonnes grading 0.25 g/t representing 15 million ounces of gold, inferred resources of 640 million tonnes grading 0.2 g/t representing 3.9 million ounces of gold, indicated resources of 2,000 million tonnes grading 0.43% representing 8.4 million tonnes of copper, and inferred resources of 690 million tonnes grading 0.3% representing 2.2 million tonnes of copper. Complete 2024 mineral reserve and mineral resource data for all mines and projects referenced in this MD&A, including tonnes, grades, and ounces, can be found on pages 32-45 of Barrick's Annual Information Form/Form 40-F for the year ended December 31, 2024 on file with Canadian provincial securities regulatory authorities and the U.S. Securities and Exchange Commission.
- 23 Refer to the Technical Report on the Lumwana Expansion Project, Republic of Zambia, dated February 19, 2025, and filed on SEDAR+ at www.sedarplus.ca and EDGAR at www.sec.gov on February 19, 2025.

GLOSSARY OF TECHNICAL TERMS

ALL-IN SUSTAINING COSTS: A non-GAAP measure of cost per ounce/pound for gold/copper. Refer to page 56 of this MD&A for further information and a reconciliation of the measure.

AUTOCLAVE: Oxidation process in which high temperatures and pressures are applied to convert refractory sulfide mineralization into amenable oxide ore.

BY-PRODUCT: A secondary metal or mineral product recovered in the milling process such as silver.

C1 CASH COSTS: A non-GAAP measure of cost per pound for copper. Refer to page 56 of this MD&A for further information and a reconciliation of the measure.

CONCENTRATE: A very fine, powder-like product containing the valuable ore mineral from which most of the waste mineral has been eliminated.

CONTAINED OUNCES: Represents ounces in the ground before loss of ounces not able to be recovered by the applicable metallurgical processing process.

DEVELOPMENT: Work carried out for the purpose of gaining access to an ore body. In an underground mine, this includes shaft sinking, crosscutting, drifting and raising. In an open-pit mine, development includes the removal of overburden (more commonly referred to as stripping in an open pit).

DILUTION: The effect of waste or low-grade ore which is unavoidably extracted and comingled with the ore mined thereby lowering the recovered grade from what was planned to be mined.

DORÉ: Unrefined gold and silver bullion bars usually consisting of approximately 90 percent precious metals that will be further refined to almost pure metal.

DRILLING:

Core: drilling with a hollow bit with a diamond cutting rim to produce a cylindrical core that is used for geological study and assays.

Reverse circulation: drilling that uses a rotating cutting bit within a double-walled drill pipe and produces rock chips rather than core. Air or water is circulated down to the bit between the inner and outer wall of the drill pipe. The chips are forced to the surface through the center of the drill pipe and are collected, examined and assayed.

In-fill: drilling closer spaced holes in between existing holes, used to provide greater geological detail and to help upgrade resource estimates to reserve estimates.

Step-out: drilling to intersect a mineralized horizon or structure along strike or down-dip.

EXPLORATION: Prospecting, sampling, mapping, drilling and other work involved in searching for minerals.

FREE CASH FLOW: A non-GAAP measure that reflects our ability to generate cash flow. Refer to page 55 of this MD&A for a definition.

GRADE: The amount of metal in each tonne of ore, expressed as grams per tonne (g/t) for precious metals and as a percentage for most other metals.

Cut-off grade: the minimum metal grade at which an ore body can be economically mined (used in the calculation of ore reserves).

Mill-head grade: metal content per tonne of ore going into a mill for processing.

Reserve grade: estimated metal content of an ore body, based on reserve calculations.

HEAP LEACHING: A process whereby gold/copper is extracted by "heaping" broken ore on sloping impermeable pads and continually applying to the heaps a weak cyanide solution/sulfuric acid which dissolves the contained gold/copper. The gold/copper-laden solution is then collected for gold/copper recovery.

HEAP LEACH PAD: A large impermeable foundation or pad used as a base for stacking ore for the purpose of heap leaching.

MILL: A processing facility where ore is finely ground and thereafter undergoes physical or chemical treatment to extract the valuable metals.

MINERAL RESERVE: See pages 73 to 81 – Summary Gold/Copper Mineral Reserves and Mineral Resources.

MINERAL RESOURCE: See pages 73 to 81 – Summary Gold/Copper Mineral Reserves and Mineral Resources.

OPEN PIT: A mine where the minerals are mined entirely from the surface.

ORE: Rock, generally containing metallic or non-metallic minerals, which can be mined and processed at a profit.

ORE BODY: A sufficiently large amount of ore that can be mined economically.

OUNCES: Troy ounce is a unit of measure used for weighing gold at 999.9 parts per thousand purity and is equivalent to 31.1035g.

RECLAMATION: The process by which lands disturbed as a result of mining activity are modified to support future beneficial land use. Reclamation activity may include the removal of buildings, equipment, machinery and other physical remnants of mining, closure of tailings storage facilities, leach pads and other mine features, and contouring, covering and re-vegetation of waste rock dumps and other disturbed areas.

RECOVERY RATE: A term used in process metallurgy to indicate the proportion of valuable material physically recovered in the processing of ore. It is generally stated as a percentage of the valuable material recovered compared to the total material originally contained in the ore.

REFINING: The final stage of metal production in which impurities are removed through heating to extract the pure metal.

ROASTING: The treatment of sulfide ore by heat and air, or oxygen enriched air, in order to oxidize sulfides and remove other elements (carbon, antimony or arsenic).

SAFE CLOSURE: A closed tailings facility that does not pose ongoing material risks to people or the environment which has been confirmed by an Independent Tailings Review Board or senior independent technical reviewer and signed off by an Accountable Executive as defined by the Global Industry Standard on Tailings Management.

STRIPPING: Removal of overburden or waste rock overlying an ore body in preparation for mining by open-pit methods.

TAILINGS: The material that remains after all economically and technically recoverable precious metals have been removed from the ore during processing.

TOTAL CASH COSTS: A non-GAAP measure of cost per ounce for gold. Refer to page 56 of this MD&A for further information and a reconciliation of the measure.

MINERAL RESERVES AND MINERAL RESOURCES

The tables on the next eight pages set forth Barrick's interest in the total proven and probable gold, silver and copper reserves and in the total measured, indicated and inferred gold, silver and copper resources and certain related information at each property. For further details of proven and probable mineral reserves and measured, indicated and inferred mineral resources by category, metal and property, see pages 73 to 81.

The Company has carefully prepared and verified the mineral reserve and mineral resource figures and believes that its method of estimating mineral reserves has been verified by mining experience. These figures are estimates, however, and no assurance can be given that the indicated quantities of metal will be produced. Metal price fluctuations may render mineral reserves containing relatively lower grades of mineralization uneconomic. Moreover, short-term operating factors relating to the mineral reserves, such as the need for orderly development of ore bodies or the processing of new or different ore grades, could affect the Company's profitability in any particular accounting period.

DEFINITIONS

A *mineral resource* is a concentration or occurrence of diamonds, natural solid inorganic material, or natural solid fossilized organic material including base and precious metals, coal, and industrial minerals in or on the Earth's crust in such form and quantity and of such a grade or quality that it has reasonable prospects for economic extraction. The location, quantity, grade, geological characteristics and continuity of a mineral resource are known, estimated or interpreted from specific geological evidence and knowledge. Mineral resources are sub-divided, in order of increasing geological confidence, into inferred, indicated and measured categories.

An *inferred mineral resource* is that part of a mineral resource for which quantity and grade or quality can be estimated on the basis of geological evidence and limited sampling and reasonably assumed, but not verified, geological and grade continuity. The estimate is based on limited information and sampling gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes.

An *indicated mineral resource* is that part of a mineral resource for which quantity, grade or quality, densities, shape and physical characteristics can be estimated with a level of confidence sufficient to allow the appropriate application of technical and economic parameters, to support mine planning and evaluation of the economic viability of the deposit. The estimate is based on detailed and reliable exploration and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes that are spaced closely enough for geological and grade continuity to be reasonably assumed.

A *measured mineral resource* is that part of a mineral resource for which quantity, grade or quality, densities, shape and physical characteristics are so well established that they can be estimated with confidence sufficient to allow the appropriate application of technical and economic parameters, to support production planning and evaluation of the economic viability of the deposit. The estimate is based on detailed and reliable exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes that are spaced closely enough to confirm both geological and grade continuity.

Mineral resources, which are not mineral reserves, do not have demonstrated economic viability.

A *mineral reserve* is the economically mineable part of a measured or indicated mineral resource demonstrated by at least a preliminary feasibility study. This study must include adequate information on mining, processing, metallurgical, economic and other relevant factors that demonstrate, at the time of reporting, that economic extraction can be justified.

A *mineral reserve* includes diluting materials and allowances for losses that may occur when the material is mined. Mineral reserves are sub-divided in order of increasing confidence into probable mineral reserves and proven mineral reserves. A *probable mineral reserve* is the economically mineable part of an indicated and, in some circumstances, a measured mineral resource demonstrated by at least a preliminary feasibility study. This study must include adequate information on mining, processing, metallurgical, economic and other relevant factors that demonstrate, at the time of reporting, that economic extraction can be justified.

A *proven mineral reserve* is the economically mineable part of a measured mineral resource demonstrated by at least a preliminary feasibility study. This study must include adequate information on mining, processing, metallurgical, economic and other relevant factors that demonstrate, at the time of reporting, that economic extraction is justified.

MINERAL RESERVES AND RESOURCES ENDNOTES

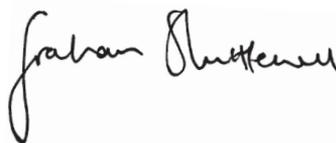

1. Mineral reserves (“reserves”) and mineral resources (“resources”) have been estimated as at December 31, 2025 (unless otherwise noted) in accordance with National Instrument 43-101 – Standards of Disclosure for Mineral Projects (“NI 43-101”) as required by Canadian securities regulatory authorities. For United States reporting purposes, the SEC has adopted amendments to its disclosure rules to modernize the mineral property disclosure requirements for issuers whose securities are registered with the SEC under the Securities and Exchange Act of 1934, as amended (the “Exchange Act”). These amendments became effective February 25, 2019 (the “SEC Modernization Rules”) with compliance required for the first fiscal year beginning on or after January 1, 2021. The SEC Modernization Rules replace the historical property disclosure requirements for mining registrants that were included in SEC Industry Guide 7, which was rescinded from and after the required compliance date of the SEC Modernization Rules. As a result of the adoption of the SEC Modernization Rules, the SEC now recognizes estimates of “measured”, “indicated” and “inferred” mineral resources. In addition, the SEC has amended its definitions of “proven mineral reserves” and “probable mineral reserves” to be substantially similar to the corresponding Canadian Institute of Mining, Metallurgy and Petroleum definitions, as required by NI 43-101. U.S. investors should understand that “inferred” mineral resources have a great amount of uncertainty as to their existence and great uncertainty as to their economic and legal feasibility. In addition, U.S. investors are cautioned not to assume that any part or all of Barrick’s mineral resources constitute or will be converted into reserves. Mineral resource and mineral reserve estimations have been prepared by employees of Barrick, its joint venture partners or its joint venture operating companies, as applicable, under the supervision of Tricia Evans, BSc, SMERM, Mineral Resource Manager: North America; Mark Roux, BSc (Hons), P. Grad. Cert. (Geostatistics), Pr. Sci. Nat, Resource Geology Lead – North America; Richard Peattie, MPhil, FAusIMM, Mineral Resources Manager: Africa and Middle East; Peter Jones, MAIG, Manager Resource Geology – South America & Asia Pacific; and Joel Holliday, FAusIMM, Executive Vice-President, Exploration. For 2025, reserves have been estimated based on an assumed gold price of US\$1,500 per ounce, an assumed silver price of US\$21.00 per ounce, and an assumed copper price of US\$3.25 per pound and long-term average exchange rates of 1.30 CAD/US\$, except at Zaldivar, where mineral reserves for 2025 were calculated using Antofagasta guidance and an updated assumed copper price of US\$4.15 per pound; and at Norte Abierto where mineral reserves are reported by Newmont within a \$1,700 per ounce gold, \$3.50 per pound copper and \$20 per ounce silver pit design. For 2024, reserves were estimated based on an assumed gold price of US\$1,400 per ounce, an assumed silver price of US\$20.00 per ounce, and an assumed copper price of US\$3.00 per pound and long-term average exchange rates of 1.30 CAD/US\$, except at Tongon and Hemlo open pit, where mineral reserves were estimated using \$1,650/oz; at Zaldivar, where mineral reserves were calculated using Antofagasta guidance and an updated assumed copper price of US\$3.80 per pound and at Norte Abierto where mineral reserves are reported by Newmont within a \$1,200 per ounce of gold, \$2.75 per pound of copper and \$22 per ounce of silver pit design, before application of updated 2023 project economics using escalated operating and capital costs resulting in Newmont guidance of \$1,600 per ounce of gold, \$4.00 per pound of copper and \$23 per ounce of silver for assumed mineral reserve commodity prices. Reserve estimates incorporate current and/or expected mine plans and cost levels at each property. Varying cut-off grades have been used depending on the mine and type of ore contained in the reserves. Barrick’s normal data verification procedures have been employed in connection with the calculations. Verification procedures include industry-standard quality control practices. Resources as at December 31, 2025 have been estimated using varying cut-off grades, depending on both the type of mine or project, its maturity and ore types at each property.
2. In confirming our annual reserves for each of our mineral properties, projects, and operations, we conduct a reserve test on December 31 of each year to verify that the future undiscounted cash flow from reserves is positive. The cash flow ignores all sunk costs and only considers future operating and closure expenses as well as any future capital costs.
3. All mineral resource and mineral reserve estimates of tonnes, Au oz, Ag oz and Cu tonnes are reported to the second significant digit.
4. The estimated mineral resources and mineral reserves for the Loulo-Gounkoto Complex, which were done under the 1991 Malian Mining Code and the Loulo and Gounkoto Mining Conventions under which the Complex has operated until 24 November 2025, have been tested under the 2023 Mining Code and no material impact was found.
5. 2025 polymetallic mineral resources and mineral reserves are estimated using the combined value of gold, copper & silver and accordingly are reported as gold, copper and silver mineral resources and mineral reserves.
6. For 2025, mineral resources have been estimated based on an assumed gold price of US\$2,000 per ounce, an assumed silver price of US\$25.00 per ounce, and an assumed copper price of US\$4.50 per pound and long-term average exchange rates of 1.30 CAD/US\$, except Zaldivar, where mineral resources for 2025 were estimated using Antofagasta guidance and an assumed copper price of US\$4.75 per pound, and Norte Abierto, where mineral resources are reported by Newmont within a \$2,000 per ounce of gold, \$4.00 per pound of copper and \$23/oz per ounce of silver pit shell. For 2024, mineral resources were estimated based on an assumed gold price of US\$1,900 per ounce, an assumed silver price of US\$24.00 per ounce, and an assumed copper price of US\$4.00 per pound and long-term average exchange rates of 1.30 CAD/US\$, except at Zaldivar, where mineral resources for 2024 were calculated using Antofagasta guidance and an assumed copper price of US\$4.40 and Norte Abierto, where mineral resources are reported by Newmont within a \$1,400 per ounce of gold, \$3.25 per pound of copper and \$20 per ounce of silver pit shell, before application of updated 2023 project economics using escalated operating and capital costs resulting in Newmont guidance of \$1,600 per ounce of for gold, \$4.00 per pound of for copper and \$23 per ounce of silver for assumed mineral resource commodity price.
7. Mineral resources which are not mineral reserves do not have demonstrated economic viability.
8. Mineral resources are reported inclusive of mineral reserves.
9. All measured and indicated mineral resource estimates of grade and all proven and probable mineral reserve estimates of grade for Au g/t, Ag g/t and Cu % are reported to two decimal places.
10. All inferred mineral resource estimates of grade for Au g/t, Ag g/t and Cu % are reported to one decimal place.
11. On December 1, 2025, Barrick sold its interest in the Tongon gold mine to the Atlantic Group. For additional information, see page 12 of Barrick’s Annual Report 2025.
12. On November 26, 2025, Barrick sold the Hemlo gold mine to Carcetti Capital Corp. For additional information, see page 12 of Barrick’s Annual Report 2025.
13. For 2025 Mineral Resources and Mineral Reserves, Pueblo Viejo is reported as part of the North America Region and sub-totals. For 2024 Mineral Resources and Mineral Reserves, Pueblo Viejo was reported as part of the South America and Asia Pacific Region and sub-totals.

MANAGEMENT'S RESPONSIBILITY FOR FINANCIAL STATEMENTS

The accompanying consolidated financial statements have been prepared by and are the responsibility of the Board of Directors and Management of the Company.

The consolidated financial statements have been prepared in accordance with IFRS Accounting Standards as issued by the International Accounting Standards Board and reflect Management's best estimates and judgments based on currently available information. The Company has developed and maintains a system of internal controls in order to ensure, on a reasonable and cost effective basis, the reliability of its financial information.

The consolidated financial statements have been audited by PricewaterhouseCoopers LLP, Chartered Professional Accountants. Their report outlines the scope of their examination and opinion on the consolidated financial statements.

Graham Shuttleworth
Senior Executive Vice President
and Chief Financial Officer
February 4, 2026

MANAGEMENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

Barrick's management is responsible for establishing and maintaining adequate internal control over financial reporting.

Barrick's management assessed the effectiveness of the Company's internal control over financial reporting as at December 31, 2025. Barrick's Management used the Internal Control – Integrated Framework (2013) as issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) to evaluate the effectiveness of Barrick's internal control over financial reporting. Based on management's assessment, Barrick's internal control over financial reporting is effective as at December 31, 2025.

The effectiveness of the Company's internal control over financial reporting as at December 31, 2025 has been audited by PricewaterhouseCoopers LLP, Chartered Professional Accountants, as stated in their report which is located on pages 83 – 84 of Barrick's 2025 Annual Financial Statements.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Shareholders of Barrick Mining Corporation

Opinions on the Financial Statements and Internal Control over Financial Reporting

We have audited the accompanying consolidated balance sheets of Barrick Mining Corporation (formerly Barrick Gold Corporation) and its subsidiaries (the Company) as of December 31, 2025 and 2024, and the related consolidated statements of income, of comprehensive income, of changes in equity and of cash flow for the years then ended, including the related notes (collectively referred to as the consolidated financial statements). We also have audited the Company's internal control over financial reporting as of December 31, 2025, based on criteria established in *Internal Control – Integrated Framework* (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Company as of December 31, 2025 and 2024, and its financial performance and its cash flows for the years then ended in conformity with IFRS Accounting Standards as issued by the International Accounting Standards Board. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2025, based on criteria established in *Internal Control – Integrated Framework* (2013) issued by the COSO.

Basis for Opinions

The Company's management is responsible for these consolidated financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Report on Internal Control over Financial Reporting. Our responsibility is to express opinions on the Company's consolidated financial statements and on the Company's internal control over financial reporting based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) (PCAOB) and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement, whether due to error or fraud, and whether effective internal control over financial reporting was maintained in all material respects.

Our audits of the consolidated financial statements included performing procedures to assess the risks of material misstatement of the consolidated financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

Definition and Limitations of Internal Control over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Critical Audit Matters

The critical audit matter communicated below is a matter arising from the current period audit of the consolidated financial statements that was communicated or required to be communicated to the audit committee and that (i) relates to accounts or disclosures that are material to the consolidated financial statements and (ii) involved our especially challenging, subjective, or complex judgments. The communication of critical audit matters does not alter in any way our opinion on the consolidated financial statements, taken as a whole, and we are not, by communicating the critical audit matter below, providing a separate opinion on the critical audit matter or on the accounts or disclosures to which it relates.

Fair Value of the Investments in Somilo and Goukoto Used as Purchase Consideration and Fair Value of the Mining Interests Acquired as Part of the Acquisition of Loulo-Goukoto

As described in Notes 3, 4, and 35 to the consolidated financial statements, the Company owns 80% of Société des Mines de Loulo SA (Somilo) and Société des Mines de Goukoto (Goukoto) (together, Loulo-Goukoto). The Company regained control of Loulo-Goukoto on December 16, 2025. Management determined that this represented a business combination for no cash consideration and the acquisition price was equal to the fair value of the Company's 80% investment in the equity of Loulo-Goukoto, which was \$2.6 billion. Management also determined the fair value of the mining interests acquired, which represented a significant portion of the property, plant and equipment acquired of \$3.1 billion. Management used discounted cash flow models to determine the fair values of the Company's 80% investment in the equity of Loulo-Goukoto and the mining interests based on the life of mine plans. Management's estimates of fair value were based on judgment and assumptions with respect to future metal prices, operating and capital costs, weighted average cost of capital and future production levels, including mineral reserves and resources and expected conversions of resources to reserves. Management's estimates of future production levels, including mineral reserves and resources and expected conversions of resources to reserves were based on information compiled by management's specialists.

The principal considerations for our determination that performing procedures relating to the fair value of the investments in Somilo and Goukoto used as purchase consideration and fair value of the mining interests acquired as part of the acquisition of Loulo-Goukoto is a critical audit matter are (i) the judgment by management, including the use of management's specialists, in estimating the fair values of the investments in Loulo-Goukoto and the mining interests acquired as part of the acquisition of Loulo-Goukoto; (ii) a high degree of auditor judgment, subjectivity and effort in performing procedures and evaluating management's assumptions with respect to future metal prices, operating and capital costs, weighted average cost of capital, and future production levels, including mineral reserves and resources and expected conversions of resources to reserves; and (iii) the audit effort involved the use of professionals with specialized skill and knowledge.

Addressing the matter involved performing procedures and evaluating audit evidence in connection with forming our overall opinion on the consolidated financial statements. These procedures included testing the effectiveness of controls relating to management's valuations of the investments in Loulo-Goukoto and the mining interests acquired as part of the acquisition of Loulo-Goukoto, including controls over the assumptions used in management's estimates of fair value. These procedures also included, among others, testing management's process for determining the fair values of the investments in Loulo-Goukoto and the mining interests acquired; evaluating the appropriateness of the methods and discounted cash flow models used; testing the completeness and accuracy of underlying data used in the models; and evaluating the reasonableness of the assumptions used by management in the estimates of fair value. Evaluating the reasonableness of the assumptions used by management in the estimates of fair value with respect to future metals prices and operating and capital costs involved (i) comparing future metal prices to external industry data; (ii) comparing operating and capital costs to recent actual operating and capital costs incurred and assessing whether these assumptions were consistent with evidence obtained in other areas of the audit, where appropriate; and (iii) comparing certain operating costs to the Malian 2023 Mining Code. The work of management's specialists was used in performing the procedures to evaluate the reasonableness of future production levels, including mineral reserves and resources and expected conversions of resources to reserves. As a basis for using this work, management's specialists' qualifications and objectivity were understood and the Company's relationship with management's specialists was assessed. The procedures performed also included evaluation of the methods and assumptions used by management's specialists, tests of data used by management's specialists and an evaluation of management's specialists' findings. Professionals with specialized skill and knowledge were used to assist in evaluating the appropriateness of the methods and discounted cash flow models and the reasonableness of the weighted average cost of capital.

PricewaterhouseCoopers LLP

Barrick Mining Corporation (formerly Barrick Gold Corporation) For the years ended December 31 (in millions of United States dollars, except per share data)	2025	2024
Revenue (notes 5 and 6)	\$ 16,956	\$ 12,922
Costs and expenses (income)		
Cost of sales (notes 5 and 7)	8,265	7,961
General and administrative expenses (note 11)	222	115
Exploration, evaluation and project expenses (notes 5 and 8)	367	392
Impairment charges (reversals) (notes 10 and 21)	12	(457)
Loss on currency translation	3	39
Closed mine rehabilitation (note 27b)	8	59
Income from equity investees (note 16)	(444)	(241)
Other (income) expense (note 9)	(509)	214
Income before finance items and income taxes	9,032	4,840
Finance costs, net (note 14)	(227)	(232)
Income before income taxes	8,805	4,608
Income tax expense (note 12)	(1,651)	(1,520)
Net income	\$ 7,154	\$ 3,088
Attributable to:		
Equity holders of Barrick Mining Corporation	\$ 4,993	\$ 2,144
Non-controlling interests (note 32)	\$ 2,161	\$ 944
Earnings per share data attributable to the equity holders of Barrick Mining Corporation (note 13)		
Net income		
Basic	\$ 2.93	\$ 1.22
Diluted	\$ 2.93	\$ 1.22

The accompanying notes are an integral part of these consolidated financial statements.

Consolidated Statements of Comprehensive Income

Barrick Mining Corporation (formerly Barrick Gold Corporation) For the years ended December 31 (in millions of United States dollars)	2025	2024
Net income	\$ 7,154	\$ 3,088
Other comprehensive income (loss), net of taxes		
Items that may be reclassified subsequently to profit or loss:		
Unrealized gains (losses) on derivatives designated as cash flow hedges, net of tax \$nil and \$nil	(386)	1
Realized losses on derivatives designated as cash flow hedges, net of tax \$nil and \$nil	1	–
Items that will not be reclassified to profit or loss:		
Actuarial gain (loss) on post-employment benefit obligations, net of tax \$nil and \$nil	6	(4)
Net change in value of equity investments, net of tax \$(9) and \$nil	73	12
Total other comprehensive (loss) income	(306)	9
Total comprehensive income	\$ 6,848	\$ 3,097
Attributable to:		
Equity holders of Barrick Mining Corporation	\$ 4,687	\$ 2,153
Non-controlling interests	\$ 2,161	\$ 944

The accompanying notes are an integral part of these consolidated financial statements.

Consolidated Statements of Cash Flow

Barrick Mining Corporation (formerly Barrick Gold Corporation) For the years ended December 31 (in millions of United States dollars)	2025	2024
OPERATING ACTIVITIES		
Net income	\$ 7,154	\$ 3,088
Adjustments for the following items:		
Depreciation	1,906	1,915
Finance costs, net (note 14)	227	232
Impairment charges (reversals) (notes 10 and 21)	12	(457)
Income tax expense (note 12)	1,651	1,520
Income from equity investees (note 16)	(444)	(241)
Loss on currency translation	3	39
Loulo-Goukoto (notes 9 and 35)	625	–
Gain on sale of non-current assets (note 9)	(1,477)	(24)
Change in working capital (note 15)	(23)	(382)

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Barrick Mining Corporation. *Tabular dollar amounts in millions of United States dollars, unless otherwise shown. References to A\$, ARS, C\$, DOP, EUR, GBP, PKR, TZS, XOF, ZAR, and ZMW are to Australian dollars, Argentine pesos, Canadian dollars, Dominican pesos, Euros, British pound sterling, Pakistani rupee, Tanzanian shilling, West African CFA franc, South African rand, and Zambian kwacha, respectively.*

1. CORPORATE INFORMATION

Barrick Mining Corporation (formerly Barrick Gold Corporation) (“Barrick”, “we” or the “Company”) is a corporation governed by the *Business Corporations Act (British Columbia)*. The Company’s corporate office is located at Brookfield Place, TD Canada Trust Tower, 161 Bay Street, Suite 3700, Toronto, Ontario, M5J 2S1. The Company’s registered office is 925 West Georgia Street, Suite 1600, Vancouver, British Columbia, V6C 3L2. Barrick shares trade on the New York Stock Exchange under the symbol B (formerly GOLD) and the Toronto Stock Exchange under the symbol ABX. We are principally engaged in the production and sale of gold and copper, as well as related activities such as exploration and mine development. We sell our gold and copper into the world market.

We have ownership interests in producing gold mines that are located in Argentina, the Democratic Republic of Congo, the Dominican Republic, Mali, Papua New Guinea, Tanzania and the United States. We have ownership interests in producing copper mines in Chile, Saudi Arabia and Zambia. We also have various projects located throughout the Americas, Asia and Africa.

2. MATERIAL ACCOUNTING POLICY INFORMATION

a) Statement of Compliance

These consolidated financial statements have been prepared in accordance with IFRS Accounting Standards as issued by the International Accounting Standards Board (“IFRS”). Accounting policies are consistently applied to all years presented, unless otherwise stated. These consolidated financial statements were approved for issuance by the Board of Directors on February 4, 2026.

b) Basis of Preparation

These consolidated financial statements include the accounts of Barrick, its subsidiaries, its share of joint operations (“JO”) and its equity share of joint ventures (“JV”). When applying the equity method of accounting, specifically for Porgera, whereby the economic interest differs from the shareholding, the equity accounting is based on the economic share contractually agreed among the shareholders rather than the equity participation. For non wholly-owned, controlled subsidiaries, profit or loss for the period that is attributable to non-controlling interests is typically calculated based on the ownership of the minority shareholders in the subsidiary.

Outlined below is information related to our joint arrangements and entities other than 100% owned Barrick subsidiaries at December 31, 2025:

	Place of business	Entity type	Interest ¹	Method ²
Nevada Gold Mines ³	United States	Subsidiary	61.5%	Consolidation
North Mara ^{3,4}	Tanzania	Subsidiary	84%	Consolidation
Bulyanhulu ^{3,4}	Tanzania	Subsidiary	84%	Consolidation
Loulo-Gounkoto ^{3,5}	Mali	Subsidiary	80%	Consolidation
Pueblo Viejo ³	Dominican Republic	Subsidiary	60%	Consolidation
Reko Diq Project ³	Pakistan	Subsidiary	50%	Consolidation
Norte Abierto Project	Chile	JO	50%	Our share
Veladero	Argentina	JO	50%	Our share
Kibali ⁶	Democratic Republic of Congo	JV	45%	Equity Method
Jabal Sayid ⁶	Saudi Arabia	JV	50%	Equity Method
Zaldívar ⁶	Chile	JV	50%	Equity Method
Porgera Mine ^{6,7}	Papua New Guinea	JV	24.5%	Equity Method

¹ Unless otherwise noted, all of our JOs are funded by contributions made by the parties sharing joint control in proportion to their economic interest.

² For our JOs, we recognize our share of any assets, liabilities, revenues and expenses of the JO.

³ We consolidate our interests in Carlin, Cortez, Turquoise Ridge, Phoenix, Long Canyon, North Mara, Bulyanhulu, Loulo-Gounkoto, Pueblo Viejo and the Reko Diq project and record a non-controlling interest (“NCI”) for the interest that we do not own.

⁴ The Government of Tanzania receives half of the economic benefits from the Tanzanian operations (Bulyanhulu and North Mara) from taxes, royalties, clearing fees and participation in all cash distributions made by the mines, after the recoupment of capital investments. Earnings are recorded proportionally based on our equity interests each period in accordance with the terms of the agreement with the Government of Tanzania.

⁵ Refer to notes 4 and 35 for details of Loulo-Gounkoto’s developments during 2025.

⁶ Barrick has commitments of \$893 million relating to its interest in the joint ventures, including purchase obligations disclosed in note 17 and capital commitments disclosed in note 19.

⁷ Ownership of Porgera is held in a joint venture owned 51% by Papua New Guinea (“PNG”) stakeholders and 49% by a Barrick affiliate, Porgera (Jersey) Limited (“PJL”). PJL is jointly owned on a 50/50 basis by Barrick and Zijin Mining Group and therefore Barrick holds a 24.5% ownership interest in the Porgera joint venture. Barrick holds a 23.5% interest in the economic benefits of the mine under the economic benefit sharing arrangement agreed with the PNG government whereby Barrick and Zijin Mining Group together share 47% of the overall economic benefits derived from the mine accumulated over time, and the PNG stakeholders share the remaining 53%.

c) Business Combinations

On the acquisition of a business, the acquisition method of accounting is used, whereby the purchase consideration is allocated to the identifiable assets and liabilities on the basis of fair value at the date of acquisition. Provisional fair values allocated at a reporting date are finalized as soon as the relevant information is available, within a period not to exceed 12 months from the acquisition date with retroactive restatement of the impact of adjustments to those provisional fair values effective as at the acquisition date. Incremental costs related to acquisitions are expensed as incurred.

When the cost of the acquisition exceeds the fair value of the identifiable net assets acquired, the difference is recorded as goodwill. If the fair value attributable to Barrick's share of the identifiable net assets exceeds the cost of acquisition, the difference is recognized as a gain in the consolidated statement of income.

Non-controlling interests represent the fair value of net assets in subsidiaries, as at the date of acquisition, that are not held by Barrick and are presented in the equity section of the consolidated balance sheet.

d) Foreign Currency Translation

The functional currency of all of our operations is the US dollar. We translate non-US dollar balances for these operations into US dollars as follows:

- Property, plant and equipment ("PP&E"), intangible assets and equity method investments using the rates at the time of acquisition;
- Fair value through other comprehensive income ("FVOCI") equity investments using the closing exchange rate as at the balance sheet date with translation gains and losses permanently recorded in Other Comprehensive Income ("OCI");
- Deferred tax assets and liabilities using the closing exchange rate as at the balance sheet date with translation gains and losses recorded in income tax expense;
- Other assets and liabilities using the closing exchange rate as at the balance sheet date with translation gains and losses recorded in other income/expense; and
- Income and expenses using the average exchange rate for the period, except for expenses that relate to non-monetary assets and liabilities measured at historical rates, which are translated using the same historical rate as the associated non-monetary assets and liabilities.

e) Revenue Recognition

We sell our production in the world market through the following distribution channels: gold bullion is sold in the gold spot market, to independent refineries or to our non-controlling interest holders; and gold and copper concentrate is sold to independent smelting or trading companies.

Gold Bullion Sales

Gold bullion is sold primarily in the London spot market. The sale price is fixed on the date of sale based on the gold spot price. Generally, we record revenue from gold bullion sales at the time of delivery, which is also the date that title to the gold passes.

Concentrate Sales

Under the terms of concentrate sales contracts with independent smelting companies, gold and copper sales prices are provisionally set on a specified future date after shipment based upon market prices. We record revenues under these contracts at the time of shipment, which is also when the risks and rewards of ownership pass to the smelting companies, using forward market gold and copper prices on the expected date that final sales prices will be determined. Variations between the price recorded at the shipment date and the actual final price set under the smelting contracts are caused by changes in market gold and copper prices, which result in an embedded derivative in accounts receivable. The receivable is recorded at fair value each period until final settlement occurs, with changes in fair value classified as provisional price adjustments and included in revenue in the consolidated statement of income and presented separately in note 6 of these consolidated financial statements.

Copper Cathode Sales

Under the terms of copper cathode sales contracts, copper sales prices are provisionally set on a specified future date based upon market commodity prices plus certain price adjustments. Revenue is recognized at the time of shipment, which is also when the risks and rewards of ownership pass to the customer. Revenue is provisionally measured using forward market prices on the expected date that final selling prices will be determined. Variations occur between the price recorded on the date of revenue recognition and the actual final price under the terms of the contracts due to changes in market copper prices, which result in an embedded derivative in accounts receivable. The receivable is recorded at fair value each period until final settlement occurs, with changes in fair value classified as provisional price adjustments and included in revenue in the consolidated statement of income and presented separately in note 6 of these consolidated financial statements.

Streaming Arrangements

As the deferred revenue on streaming arrangements is considered variable consideration, an adjustment is made to the transaction price per unit each time there is a change in the underlying production profile of a mine (typically in Q4 of each year). The change in the transaction price per unit results in a cumulative catch-up adjustment to revenue in the period in which the change is made, reflecting the new production profile expected to be delivered under the streaming agreement. A corresponding cumulative catch-up adjustment is made to accretion expense, reflecting the impact of the change in the deferred revenue balance.

f) Exploration and Evaluation

Exploration expenditures are the costs incurred in the initial search for mineral deposits with economic potential or in the process of obtaining more information about existing mineral deposits. Exploration expenditures typically include costs associated with prospecting, sampling, mapping, diamond drilling and other work involved in searching for ore.

Evaluation expenditures are the costs incurred to establish the technical and commercial viability of developing mineral deposits identified through exploration activities or by acquisition. Evaluation expenditures include the cost of: (i) establishing the volume and grade of deposits through drilling of core samples, trenching and sampling activities in an ore body that is classified as either a mineral resource or a proven and probable reserve; (ii) determining the optimal methods of extraction and metallurgical and treatment processes; (iii) studies related to surveying, transportation and infrastructure requirements; (iv) permitting activities; and (v) economic evaluations to determine whether development of the mineralized material is commercially justified, including scoping, pre-feasibility and final feasibility studies.

Exploration and evaluation expenditures are expensed as incurred unless management determines that probable future economic benefits will be generated as a result of the expenditures. Once the technical feasibility and commercial viability of a program or project has been demonstrated with a pre-feasibility study, and we have recognized reserves in accordance with the Canadian Securities Administrators' National Instrument 43-101 – *Standards of Disclosure for Mineral Projects*, we account for future expenditures incurred in the development of that program or project in accordance with our policy for property, plant and equipment, as described in note 21.

g) Production Stage

A mine that is under construction is determined to enter the production stage when the project is in the location and condition necessary for it to be capable of operating in the manner intended by management. We use the following factors to assess whether these criteria have been met: (1) the level of capital expenditures compared to construction cost estimates; (2) the completion of a reasonable period of commissioning and testing of mine plant and equipment; (3) the ability to produce minerals in saleable form (within specifications); and (4) the ability to sustain ongoing production of minerals.

When a mine construction project moves into the production stage, the capitalization of certain mine construction costs ceases and costs are either capitalized to inventory or expensed, except for capitalizable costs related to property, plant and equipment additions or improvements, open pit stripping activities that provide a future benefit, underground mine development or expenditures that meet the criteria for capitalization in accordance with IAS 16 *Property, Plant and Equipment*.

h) Taxation

Current tax for each taxable entity is based on the local taxable income at the local statutory tax rate enacted or substantively enacted at the balance sheet date and includes adjustments to tax payable or recoverable in respect of previous periods.

Deferred tax is recognized using the balance sheet method in respect of all temporary differences between the tax bases of assets and liabilities, and their carrying amounts for financial reporting purposes, except as indicated below.

Deferred income tax liabilities are recognized for all taxable temporary differences, except:

- Where the deferred income tax liability arises from the initial recognition of goodwill, or the initial recognition of an asset or liability in an acquisition that is not a business combination and, at the time of the acquisition, affects neither the accounting profit nor taxable profit or loss; and
- In respect of taxable temporary differences associated with investments in subsidiaries and interests in joint arrangements, where the timing of the reversal of the temporary differences can be controlled and it is probable that the temporary differences will not reverse in the foreseeable future.

Deferred income tax assets are recognized for all deductible temporary differences and the carryforward of unused tax assets and unused tax losses, to the extent that it is probable that taxable profit will be available against which the deductible temporary differences and the carryforward of unused tax assets and unused tax losses can be utilized, except:

- Where the deferred income tax asset relating to the deductible temporary difference arises from the initial recognition of an asset or liability in an acquisition that is not a business combination and, at the time of the acquisition, affects neither the accounting profit nor taxable profit or loss; and
- In respect of deductible temporary differences associated with investments in subsidiaries and interests in joint arrangements, deferred tax assets are recognized only to the extent that it is probable that the temporary differences will reverse in the foreseeable future and taxable profit will be available against which the temporary differences can be utilized.

The carrying amount of deferred income tax assets is reviewed at each balance sheet date and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred income tax asset to be utilized. To the extent that an asset not previously recognized fulfills the criteria for recognition, a deferred income tax asset is recorded.

Deferred tax is measured on an undiscounted basis at the tax rates that are expected to apply in the periods in which the asset is realized or the liability is settled, based on tax rates and tax laws enacted or substantively enacted at the balance sheet date.

Current and deferred tax relating to items recognized directly in equity are recognized in equity and not in the income statement.

The Company is subject to assessments by various taxation authorities, who may interpret tax legislation differently than the Company. Tax liabilities for uncertain tax positions are adjusted by the Company to reflect its best estimate of the probable outcome of assessments and in light of changing facts and circumstances, such as the completion of a tax audit, expiration of a statute of limitations, the refinement of an estimate, and interest accruals associated with the uncertain tax positions until they are resolved. Some of these adjustments require significant judgment in estimating the timing and amount of any additional tax expense.

Royalties and Special Mining Taxes

Income tax expense includes the cost of royalties and special mining taxes payable to governments that are calculated based on a percentage of taxable profit whereby taxable profit represents net income adjusted for certain items defined in the applicable legislation.

Indirect Taxes

Indirect tax recoverable is recorded at its undiscounted amount and is disclosed as non-current if not expected to be recovered within 12 months.

i) Other Investments

Investments in publicly quoted equity securities that are neither subsidiaries nor associates are categorized as FVOCI pursuant to the irrevocable election available in IFRS 9 for these instruments. FVOCI equity investments are recorded at fair value with all realized and unrealized gains and losses recorded permanently in OCI. Warrant investments are classified as fair value through profit or loss ("FVPL").

j) Inventory

Material extracted from our mines is classified as either ore or waste. Ore represents material that, at the time of extraction, we expect to process into a saleable form and sell at a profit. Raw materials are comprised of both ore in stockpiles and ore on leach pads as processing is required to extract benefit from the ore. Ore is accumulated in stockpiles that are subsequently processed into gold/copper in a saleable form. The recovery of gold and copper from certain oxide ores is achieved through the heap leaching process. Work in process represents gold/copper in the processing circuit that has not completed the production process, and is not yet in a saleable form. Finished goods inventory represents gold/copper in saleable form.

Metal inventories are valued at the lower of cost and net realizable value. Cost is determined on a weighted average basis and includes all costs incurred, based on a normal production capacity, in bringing each product to its present location and condition. Cost of inventories comprises: direct labor, materials and contractor expenses, including non-capitalized stripping costs; depreciation on PP&E including capitalized stripping costs; and an allocation of general and administrative costs. As ore is removed for processing, costs are removed based on the average cost per ounce/pound in the stockpile. Net realizable value is determined with reference to relevant market prices less applicable variable selling and downstream processing costs. Inventory provisions are reversed to reflect subsequent improvements in net realizable value where the inventory is still on hand.

Mine operating supplies represent commodity consumables and other raw materials used in the production process, as well as spare parts and other maintenance supplies that are not classified as capital items. Provisions are recorded to reduce mine operating supplies to net realizable value, which is generally calculated by reference to its salvage or scrap value, when it is determined that the supplies are obsolete.

k) Royalties

Certain of our properties are subject to royalty arrangements based on mineral production at the properties. The primary type of royalty is a net smelter return (“NSR”) royalty. Under this type of royalty we pay the holder an amount calculated as the royalty percentage multiplied by the value of gold production at market gold prices less third-party smelting, refining and transportation costs. Royalty expense is recorded on completion of the production or sales process in cost of sales. Other types of royalties include:

- Net profits interest royalty to a party other than a government,
- Modified NSR royalty,
- Net smelter return sliding scale royalty,
- Gross proceeds sliding scale royalty,
- Gross smelter return royalty,
- Net value royalty,
- Land tenement royalty, and a
- Gold revenue royalty.

l) Property, Plant and Equipment

Estimated Useful Lives of Major Asset Categories

Buildings, plant and equipment	2 – 38 years
Underground mobile equipment	3 – 7 years
Light vehicles and other mobile equipment	2 – 10 years
Furniture, computer and office equipment	2 – 10 years

Buildings, Plant and Equipment

At acquisition, we record buildings, plant and equipment at cost, including all expenditures incurred to prepare an asset for its intended use. These expenditures consist of: the purchase price; brokers’ commissions; and installation costs including architectural, design and engineering fees, legal fees, survey costs, site preparation costs, freight charges, transportation insurance costs, duties, testing and preparation charges.

Buildings, plant and equipment are depreciated on a straight-line basis over their expected useful life, which commences when the assets are considered available for use. Once buildings, plant and equipment are considered available for use, they are measured at cost less accumulated depreciation and applicable impairment losses.

Depreciation on equipment utilized in the development of assets, including open pit and underground mine development, is recapitalized as development costs attributable to the related asset.

Mineral Properties

Mineral properties consist of: the fair value attributable to mineral reserves and resources acquired in a business combination or asset acquisition; underground mine development costs; open pit mine development costs; capitalized exploration and evaluation costs; and capitalized interest. In addition, we incur project costs which are generally capitalized when the expenditures result in a future benefit.

i) Acquired Mining Properties

On acquisition of a mining property, we prepare an estimate of the fair value attributable to the proven and probable mineral reserves, mineral resources and exploration potential attributable to the property. The estimated fair value attributable to the mineral reserves and the portion of mineral resources considered to be probable of economic extraction at the time of the acquisition is depreciated on a units of production (“UOP”) basis whereby the denominator is the proven and probable reserves and the portion of mineral resources considered to be probable of economic extraction based on the current life of mine (“LOM”) plan that benefit from the development and are considered probable of economic extraction. The estimated fair value attributable to mineral resources that are not considered to be probable of economic extraction at the time of the acquisition is not subject to depreciation until the resources become probable of economic extraction in the future. The estimated fair value attributable to exploration licenses is recorded as an intangible asset and is not subject to depreciation until the property enters production.

ii) Underground Mine Development Costs

At our underground mines, we incur development costs to build new shafts, declines, drifts and ramps that will enable us to physically access ore underground. The time over which we will continue to incur these costs depends on the mine life. These underground development costs are capitalized as incurred.

Capitalized underground development costs are depreciated on a UOP basis, whereby the denominator is the estimated ounces/pounds of gold/copper in proven and probable reserves and the portion of resources considered probable of economic extraction based on the current LOM plan that benefit from the development and are considered probable of economic extraction.

iii) Open Pit Mine Development Costs

In open pit mining operations, it is necessary to remove overburden and other waste materials to access ore from which minerals can be extracted economically. The process of mining overburden and waste materials is referred to as stripping. Stripping costs incurred in order to provide initial access to the ore body (referred to as pre-production stripping) are capitalized as open pit mine development costs.

Pre-production stripping costs are capitalized until an “other than de minimis” level of mineral is extracted, after which time such costs are either capitalized to inventory or, if they qualify as an open pit stripping activity that provides a future benefit, to PP&E. We consider various relevant criteria to assess when an “other than de minimis” level of mineral is produced. Some of the criteria considered would include, but are not limited to, the following: (1) the amount of minerals mined versus total ounces in ore expected over the LOM; (2) the amount of ore tonnes mined versus total LOM expected ore tonnes mined; (3) the current stripping ratio versus the strip ratio expected over the LOM; and (4) the ore grade mined versus the grade expected over the LOM.

Stripping costs incurred during the production stage of an open pit are accounted for as costs of the inventory produced during the period that the stripping costs are incurred, unless these costs are expected to provide a future economic benefit to an identifiable component of the ore body. Components of the ore body are based on the distinct development phases identified by the mine planning engineers when determining the optimal development plan for the open pit. Production phase stripping costs generate a future economic benefit when the related stripping activity: (1) improves access to a component of the ore body to be mined in the future; (2) increases the fair value of the mine (or open pit) as access to future mineral reserves becomes less costly; and (3) increases the productive capacity or extends the productive life of the mine (or open pit). Production phase stripping costs that are expected to generate a future economic benefit are capitalized as open pit mine development costs.

Capitalized open pit mine development costs are depreciated on a UOP basis whereby the denominator is the estimated ounces/pounds of gold/copper in proven and probable reserves and the portion of resources considered probable of economic extraction based on the current LOM plan that benefit from the development and are considered probable of economic extraction.

Construction-in-Progress

Assets under construction are capitalized as construction-in-progress until the asset is available for its intended use. The cost of construction-in-progress comprises its purchase price and any costs directly attributable to bringing it into working condition for its intended use. Construction-in-progress amounts related to development projects are included in the carrying amount of the development project. Construction-in-progress amounts incurred at operating mines are presented as a separate asset within PP&E. Construction-in-progress also includes deposits on long lead items. Construction-in-progress is not depreciated. Depreciation commences once the asset is complete, commissioned and available for use.

Capitalized Interest

We capitalize interest costs for qualifying assets. Qualifying assets are assets that require a significant amount of time to prepare for their intended use, including projects that are in the exploration and evaluation, development or construction stages. Qualifying assets also include significant expansion projects at our operating mines. Capitalized interest costs are considered an element of the cost of the qualifying asset which is determined based on gross expenditures incurred on an asset. Capitalization ceases when the asset is substantially complete or if active development is suspended or ceases. Where the funds used to finance a qualifying asset form part of general borrowings, the amount capitalized is calculated using a weighted average of rates applicable to the relevant borrowings during the period. Where funds borrowed are directly attributable to a qualifying asset, the amount capitalized represents the borrowing costs specific to those borrowings. Where surplus funds available out of money borrowed specifically to finance a project are temporarily invested, the total capitalized interest is reduced by income generated from short-term investments of such funds.

m) Impairment (and Reversals of Impairment) of Non-Current Assets

We review and test the carrying amounts of PP&E and intangible assets with finite lives when an indicator of impairment is considered to exist. Impairment (or reversals of impairment) assessments on PP&E and intangible assets are conducted at the level of the cash generating unit (“CGU”), which is the lowest level for which identifiable cash flows are largely independent of the cash flows of other assets and includes liabilities specific to the CGU. For operating mines and projects, the individual mine/project represents a CGU for impairment testing.

The recoverable amount of a CGU is the higher of Value in Use (“VIU”) and Fair Value Less Costs of Disposal (“FVLCD”). We have determined that the FVLCD is greater than the VIU amounts and is therefore used as the recoverable amount for impairment testing purposes. An impairment loss is recognized for any excess of the carrying amount of a CGU over its recoverable amount where both the recoverable amount and carrying value include the associated other assets and liabilities, including taxes where applicable, of the CGU. Where it is not appropriate to allocate the loss to a separate asset, an impairment loss related to a CGU is allocated to the carrying amount of the assets of the CGU on a pro rata basis based on the carrying amount of its non-monetary assets.

Impairment Reversal

An assessment is made at each reporting date to determine whether there is an indication that previously recognized impairment losses may no longer exist or may have decreased. A previously recognized impairment loss is reversed only if there has been a change in the assumptions used to determine the CGU’s recoverable amount since the last impairment loss was recognized. This reversal is recognized in the consolidated statements of income and is limited to the carrying value that would have been determined, net of any depreciation where applicable, had no impairment charge been recognized in prior years. When an impairment reversal is undertaken, the recoverable amount is assessed by reference to the higher of VIU and FVLCD. We have determined that the FVLCD is greater than the VIU amounts and is therefore used as the recoverable amount for impairment testing purposes.

n) Intangible Assets

On acquisition of a mineral property in the exploration stage, we prepare an estimate of the fair value attributable to the exploration licenses acquired, including the fair value attributable to mineral resources, if any, of that property. The fair value of the exploration license is recorded as an intangible asset (acquired exploration potential) as at the date of acquisition. When an exploration stage property moves into development, the acquired exploration potential attributable to that property is transferred to mining interests within PP&E.

We also have water rights associated with our mineral properties. Upon acquisition, they are measured at initial cost and are depreciated when they are being used. They are also subject to impairment testing when an indicator of impairment is considered to exist.

o) Goodwill

Goodwill is tested for impairment in Q4 and also when there is an indicator of impairment. At the date of acquisition, goodwill is assigned to the CGU or group of CGUs that is expected to benefit from the synergies of the business combination. For the purposes of impairment testing, goodwill is allocated to the Company’s operating segments, which are our individual minesites, and corresponds to the level at which goodwill is internally monitored by the Chief Operating Decision Maker (“CODM”). Goodwill impairment charges are not reversible.

For a CGU to which goodwill has been allocated, the most recent recoverable amount determined for the CGU may be used in the annual impairment assessment of that CGU in the current year provided all the following criteria are met:

- the assets and liabilities making up the CGU have not changed significantly (change in book value or change in nature of assets/liabilities in CGU) since the most recent recoverable amount calculation;
- The most recent recoverable amount calculation, completed in prior year, resulted in an amount that exceeded the carrying amount of the CGU by a substantial margin; and
- Based on an analysis of events that have occurred and circumstances that have changed since the most recent recoverable amount calculation, the likelihood that a current recoverable amount determination will be less than the carrying amount of the CGU is remote.

p) Debt

Debt is recognized initially at fair value, net of financing costs incurred, and subsequently measured at amortized cost. Any difference between the amounts originally received and the redemption value of the debt is recognized in the consolidated statements of income over the period to maturity using the effective interest method.

q) Derivative Instruments and Hedge Accounting

Derivative Instruments

Derivative instruments are recorded at fair value on the consolidated balance sheet, classified based on contractual maturity. Derivative instruments are classified as either hedges of the fair value of recognized assets or liabilities or of firm commitments (“fair value hedges”), hedges of highly probable forecasted transactions (“cash flow hedges”) or non-hedge derivatives. Derivatives designated as either a fair value or cash flow hedge that are expected to be highly effective in achieving offsetting changes in fair value or cash flows are assessed on an ongoing basis to determine that they actually have been highly effective throughout the financial reporting periods for which they were designated. Derivative assets and derivative liabilities are shown separately in the balance sheet unless there is a legal right to offset and intent to settle on a net basis.

Cash Flow Hedges

The effective portion of changes in the fair value of derivatives that are designated and qualify as cash flow hedges is recognized in equity. The gain or loss relating to the ineffective portion is recognized in the consolidated statements of income. Amounts accumulated in equity are transferred to the consolidated statements of income in the period when the forecasted transaction impacts earnings. When the forecasted transaction that is hedged results in the recognition of a non-financial asset or a non-financial liability, the gains and losses previously deferred in equity are transferred from equity and included in the measurement of the initial carrying amount of the asset or liability.

When a derivative designated as a cash flow hedge expires or is sold and the forecasted transaction is still expected to occur, any cumulative gain or loss relating to the derivative that is recorded in equity at that time remains in equity and is recognized in the consolidated statements of income when the forecasted transaction occurs. When a forecasted transaction is no longer expected to occur, the cumulative gain or loss that was recorded in equity is immediately transferred to the consolidated statements of income.

Non-Hedge Derivatives

Derivative instruments that do not qualify as either fair value or cash flow hedges are recorded at their fair value at the balance sheet date, with changes in fair value recognized in the consolidated statements of income.

r) Environmental Rehabilitation Provision

Mining, extraction and processing activities normally give rise to obligations for environmental rehabilitation. Rehabilitation work can include facility decommissioning and dismantling; removal or treatment of waste materials; site and land rehabilitation, including compliance with and monitoring of environmental regulations; security and other site-related costs required to perform the rehabilitation work; and operation of equipment designed to reduce or eliminate environmental effects. The extent of work required and the associated costs are dependent on the requirements of relevant authorities and our environmental policies. Routine operating costs that may impact the ultimate closure and rehabilitation activities, such as waste material handling conducted as an integral part of a mining or production process, are not included in the provision. Abnormal costs arising from unforeseen circumstances, such as the contamination caused by unplanned discharges, are recognized as an expense and liability when the event that gives rise to an obligation occurs and reliable estimates of the required rehabilitation costs can be made.

Provisions for the cost of each rehabilitation program are normally recognized at the time that an environmental disturbance occurs or a new legal or constructive obligation is determined. When the extent of disturbance increases over the life of an operation, the provision is increased accordingly. The major parts of the carrying amount of provisions relate to closure/rehabilitation of tailings facilities, heap leach pads and waste dumps; demolition of buildings/mine facilities; ongoing water treatment; and ongoing care and maintenance and security of closed mines. Costs included in the provision encompass all closure and rehabilitation activity expected to occur progressively over the life of the operation at the time of closure and post-closure in connection with disturbances as at the reporting date. Estimated costs included in the determination of the provision reflect the risks and probabilities of alternative estimates of cash flows required to settle the obligation at each particular operation. The expected rehabilitation costs are estimated based on the cost of external contractors performing the work or the cost of performing the work internally depending on management’s intention.

The timing of the actual rehabilitation expenditure is dependent upon a number of factors such as the life and nature of the asset, the operating license conditions and the environment in which the mine operates. Expenditures may occur before and after closure and can continue for an extended period of time depending on rehabilitation requirements. Rehabilitation provisions are measured at the expected value of future cash flows, which exclude the effect of inflation, discounted to their present value using a current US dollar real risk-free pre-tax discount rate. The unwinding of the discount, referred to as accretion expense, is included in finance costs and results in an increase in the amount of the provision. Provisions are updated each reporting period for changes to expected cash flows and for the effect of changes in the discount rate, and the change in estimate is added to or deducted from the related asset and depreciated over the expected economic life of the operation to which it relates.

Significant judgments and estimates are involved in forming expectations of future activities, the amount and timing of the associated cash flows and the period over which we estimate those cash flows. Those expectations are formed based on existing environmental and regulatory requirements or, if more stringent, our environmental policies which give rise to a constructive obligation.

When provisions for closure and rehabilitation are initially recognized, the corresponding cost is capitalized as an asset, representing part of the cost of acquiring the future economic benefits of the operation. The capitalized cost of closure and rehabilitation activities is recognized in PP&E and depreciated over the expected economic life of the operation to which it relates.

Adjustments to the estimated amount and timing of future closure and rehabilitation cash flows are a normal occurrence in light of the significant judgments and estimates involved. The principal factors that can cause expected cash flows to change are: the construction of new processing facilities; changes in the quantities of material in reserves and resources with a corresponding change in the life of mine plan; changing ore characteristics that impact required environmental protection measures and related costs; changes in water quality or volumes that impact the extent of water treatment required; changes in discount rates; changes in foreign exchange rates; changes in Barrick’s closure policies; and changes in laws and regulations governing the protection of the environment.

Rehabilitation provisions are adjusted as a result of changes in estimates and assumptions. Those adjustments are accounted for as a change in the corresponding cost of the related assets, including the related mineral property, except where a reduction in the provision is greater than the remaining net book value of the related assets, in which case the value is reduced to nil and the remaining adjustment is recognized in the consolidated statements of income. In the case of closed sites, changes in estimates and assumptions are recognized immediately in the consolidated statements of income. For an operating mine, the adjusted carrying amount of the related asset is depreciated prospectively. Adjustments also result in changes to future finance costs. Provisions are discounted to their present value using a current US dollar real risk-free pre-tax discount rate and the accretion expense is included in finance costs.

s) Stock-Based Compensation

We recognize the expense related to these plans over the vesting period, beginning once the grant has been approved and announced to the beneficiaries.

Barrick offers cash-settled (Restricted Share Units (“RSU”), Deferred Share Units (“DSU”) and Performance Granted Share Units (“PGSU”)) awards to certain employees, officers and directors of the Company.

Restricted Share Units

Under our Long-Term Incentive Plan, selected employees are granted RSUs where each RSU has a value equal to one Barrick common share. RSUs generally vest within three years in cash and the after-tax value of the award may be used to purchase common shares on the open market, depending on the terms of the grant. Additional RSUs are credited to reflect dividends paid on Barrick common shares over the vesting period.

A liability for RSUs is measured at fair value on the grant date and is subsequently adjusted for changes in fair value. The liability is recognized on a straight-line basis over the vesting period, with a corresponding charge to compensation expense, as a component of general and administrative expenses and cost of sales. Compensation expenses for RSUs incorporate an estimate for expected forfeiture rates based on which the fair value is adjusted.

Deferred Share Units

Under our DSU plan, Directors must receive at least 63.6% of their basic annual retainer in the form of DSUs or cash to purchase common shares that cannot be sold, transferred or otherwise disposed of until the Director leaves the Board. Each DSU has the same value as one Barrick common share. DSUs must be retained until the Director leaves the Board, at which time the cash value of the DSUs is paid out. Additional DSUs are credited to reflect dividends paid on Barrick common shares. The initial fair value of the liability is calculated as of the grant date and is recognized immediately. Subsequently, at each reporting date and on settlement, the liability is remeasured, with any change in fair value recorded as compensation expense in the period.

Performance Granted Share Units

Under our PGSU plan, select employees are granted PGSUs, where each PGSU has a value equal to one Barrick common share. Annual PGSU awards are determined based on a multiple ranging from three to six times base salary (depending on position and level of responsibility) multiplied by a performance factor. PGSUs vest within three years in cash, and the after-tax value of the award is used to purchase common shares on the open market. Generally, these shares cannot be sold until the employee meets their share ownership requirement (in which case only those Barrick shares in excess of the requirement can be sold), or until they retire or leave the Company.

The initial fair value of the liability is calculated as of the grant date and is recognized within compensation expense using the straight-line method over the vesting period. Subsequently, at each reporting date and on settlement, the liability is remeasured, with any changes in fair value recorded as compensation expense.

t) New Accounting Standards Issued

IFRS 18 Presentation and Disclosure in Financial Statements (effective for annual periods beginning on or after January 1, 2027)

In April 2024, the IASB issued IFRS 18 which will replace IAS 1 *Presentation of Financial Statements*. Even though IFRS 18 will not impact the recognition or measurement of items in the financial statements, it will impact presentation and disclosure of certain aspects of the financial statements including management-defined performance measures within the financial statements. We are currently assessing the detailed implications of applying the new standard on the financial statements and the following potential impacts have been identified based on our preliminary assessment:

- Although the adoption of IFRS 18 will have no impact on net income, items of income and expenses in the statement of income will be grouped into new categories resulting in new subtotals and/or line items being presented, including operating profit, and changes in how certain existing subtotals are calculated. Income from equity investees and interest income from cash and cash equivalents will be presented in the investing section of the Statement of Income.
- We do not expect there to be a significant change in the information that is currently disclosed in the notes; however, there will be new disclosures required for management-defined performance measures (MPM). An MPM is a subtotal of income and expenses that a company uses in public communications outside of its financial statements to convey an aspect of the financial performance of the company as a whole. We have performed an initial assessment of the performance measures that we currently use in our communications outside of the financial statements and believe that the following will meet the MPM definition: Adjusted net earnings, EBITDA, Adjusted EBITDA and Attributable EBITDA.
- From a cash flow statement perspective, there will be changes to how interest received and interest paid are presented. Interest paid will be presented as financing cash flows and interest received as investing cash flows, which is a change from the current presentation as part of operating cash flows. In addition, operating profit will be the starting point for determining cash flows from operating activities instead of net income.

We will apply the new standard from its mandatory effective date of January 1, 2027. Retrospective application is required, and so the comparative information for the financial year ending December 31, 2026 will be restated in accordance with IFRS 18.

Amendments to the Classification and Measurement of Financial Instruments (IFRS 9 and IFRS 7) (effective for annual periods beginning on or after January 1, 2026)

In May 2024, the IASB issued targeted amendments to IFRS 9 and IFRS 7, which clarify the date of recognition and derecognition of some financial assets and liabilities, and updates the disclosures for equity instruments designated at FVOCI. We performed an assessment of the impact of these amendments and do not expect them to have a material impact on the financial statements.

There are certain other new accounting standards and interpretations that have been published that are either applicable in the current year or not mandatory for the current period. We have assessed these standards and determined they do not have a material impact on Barrick in the current reporting period. No standards have been early adopted in the current period.

3. CRITICAL JUDGMENTS, ESTIMATES, ASSUMPTIONS AND RISKS

Many of the amounts included in the consolidated balance sheet require management to make judgments and/or estimates. These judgments and estimates are continuously evaluated and are based on management's experience and knowledge of the relevant facts and circumstances. Actual results may differ from the estimates. Information about such judgments and estimates is contained in the description of our accounting policies and/or other notes to the financial statements. The key areas where judgments, estimates and assumptions have been made are summarized below.

Life of Mine Plans and Reserves and Resources

Estimates of the quantities of proven and probable mineral reserves and mineral resources form the basis for our LOM plans, which are used for a number of important business and accounting purposes, including: the calculation of depreciation expense; the capitalization of production phase stripping costs; the current/non-current classification of inventory and certain receivables; the recognition of deferred revenue related to streaming arrangements and forecasting the timing of the payments related to the environmental rehabilitation provision. In addition, the underlying LOM plans are generally used in the impairment tests for goodwill and non-current assets and also in the valuation of acquired businesses. In certain cases, these LOM plans include assumptions about our ability to obtain the necessary permits required to complete the planned activities. We estimate our future production levels, including mineral reserves and resources and expected conversion of resources to reserves based on information compiled by qualified persons as defined in accordance with the Canadian Securities Administrators' National Instrument 43-101 – *Standards of Disclosure for Mineral Projects* requirements. To calculate our gold and copper mineral reserves, as well as measured, indicated, and inferred mineral resources, we have used the following assumptions. Refer to notes 19 and 21.

	As at Dec. 31, 2025	As at Dec. 31, 2024
Gold (\$/oz)		
Mineral reserves	\$ 1,500	\$ 1,400
Measured, indicated and inferred	2,000	1,900
Copper (\$/lb)		
Mineral reserves	3.25	3.00
Measured, indicated and inferred	4.50	4.00

Inventory

The measurement of inventory including the determination of its net realizable value, especially as it relates to ore in stockpiles and recoverable from leach pads, involves the use of estimates. Net realizable value is determined with reference to relevant market prices less applicable variable selling expenses. Estimation is also required in determining the tonnage, recoverable gold and copper contained therein, and in determining the remaining costs of completion to bring inventory into its saleable form. Judgment is also exercised in determining whether to recognize a provision for obsolescence on mine operating supplies, and estimates are required to determine salvage or scrap value of mine operating supplies.

Estimates of recoverable gold or copper on the leach pads are calculated from the quantities of ore placed on the leach pads (measured tonnes added to the leach pads), the grade of ore placed on the leach pads (based on assay data) and a recovery percentage (based on ore type).

Impairment and Reversal of Impairment for Non-Current Assets and Impairment of Goodwill

Goodwill and non-current assets are tested for impairment if there is an indicator of impairment or reversal of impairment, and in the case of goodwill annually during the fourth quarter, for all of our operating segments. We consider both external and internal sources of information for indications that non-current assets and/or goodwill are impaired. External sources of information we consider include changes in the market, economic, legal and permitting environment in which the CGU operates that are not within its control and affect the recoverable amount of mining interests and goodwill. Internal sources of information we consider include the manner in which mining properties and plant and equipment are being used or are expected to be used and indications of economic performance of the assets. Calculating the FVLCD of CGUs for non-current asset and goodwill impairment tests requires management to make estimates and assumptions with respect to future production levels, operating, capital and closure costs in our LOM plans, future metal prices, foreign exchange rates, Net Asset Value ("NAV") multiples, fair value of mineral resources outside LOM plans, the market values per ounce and per pound and weighted average costs of capital ("WACC"). Changes in any of the assumptions or estimates used in determining the fair values could impact the impairment analysis. Refer to notes 2m, 2o and 21 for further information.

Provisions for Environmental Rehabilitation

Management assesses its provision for environmental rehabilitation on an annual basis or when new information becomes available. This assessment includes the estimation of the future rehabilitation costs (including water treatment), the timing of these expenditures, and the impact of changes in discount rates and foreign exchange rates. The actual future expenditures may differ from the amounts currently provided if the estimates made are significantly different than actual results or if there are significant changes in environmental and/or regulatory requirements in the future. Refer to notes 2r and 27 for further information.

Taxes

Management is required to assess uncertainties and make judgments and estimations regarding the tax basis of assets and liabilities and related deferred income tax assets and liabilities, amounts recorded for uncertain tax positions, the measurement of income tax expense and indirect taxes such as royalties and export duties, and estimates of the timing of repatriation of earnings, which would impact the recognition of withholding taxes and taxes related to the outside basis on subsidiaries/associates. While these amounts represent management's best estimate based on the laws and regulations that exist at the time of preparation, we operate in certain jurisdictions that have increased degrees of political and sovereign risk and while host governments have historically supported the development of natural resources by foreign companies, tax legislation in these jurisdictions is developing and there is a risk that fiscal reform changes with respect to existing investments could unexpectedly impact application of this tax legislation. Such changes could impact the Company's judgments about the amounts recorded for uncertain tax positions, tax basis of assets and liabilities, and related deferred income tax assets and liabilities, and estimates of the timing of repatriation of earnings. This could necessitate future adjustments to tax income and expense already recorded. A number of these estimates require management to make estimates of future taxable profit, as well as the recoverability of indirect taxes, and if actual results are significantly different than our estimates, the ability to realize the deferred tax assets and indirect tax receivables recorded on our balance sheet could be impacted. Refer to notes 2h, 12, 30 and 36 for further information.

Contingencies

Contingencies can be either possible assets or possible liabilities arising from past events which, by their nature, will only be resolved when one or more future events not wholly within our control occur or fail to occur. The assessment of such contingencies inherently involves the exercise of significant judgment and estimates of the outcome of future events. In assessing loss contingencies related to legal proceedings that are pending against us or unasserted claims that may result in such proceedings or regulatory or government actions that may negatively impact our business or operations, the Company with assistance from its legal counsel evaluates the perceived merits of any legal proceedings or unasserted claims or actions as well as the perceived merits of the nature and amount of relief sought or expected to be sought, when determining the amount, if any, to recognize as a contingent liability or assessing the impact on the carrying value of assets. If the assessment of a contingency suggests that a loss is probable, and the amount can be reliably estimated, then a loss is recorded. When a contingent loss is not probable but is reasonably possible, or is probable but the amount of loss cannot be reliably estimated, then details of the contingent loss are disclosed. Loss contingencies considered remote are generally not disclosed unless they involve guarantees, in which case we disclose the nature of the guarantee. Contingent assets are not recognized in the consolidated financial statements. Refer to note 36 for more information.

Streaming Transactions

The upfront cash deposit received from Royal Gold on the gold and silver streaming transaction for production linked to Barrick's 60% interest in the Pueblo Viejo mine has been accounted for as deferred revenue since we have determined that it is not a derivative as it will be satisfied through the delivery of non-financial items (i.e., gold and silver) rather than cash or financial assets. It is our intention to settle the obligations under the streaming arrangement through our own production and if we were to fail to settle the obligations with Royal Gold through our own production, this would lead to the streaming arrangement becoming a derivative. This would cause a change to the accounting treatment, resulting in the revaluation of the fair value of the agreement through profit and loss on a recurring basis. Refer to note 29 for further details.

The deferred revenue component of our streaming agreements is considered variable and is subject to retroactive adjustment when there is a change in the timing of the delivery of ounces or in the underlying production profile of the relevant mine. The impact of such a change in the timing or quantity of ounces to be delivered under a streaming agreement will result in retroactive adjustments to both the deferred revenue recognized and the accretion recorded prior to the date of the change. Refer to note 2e. For further details on streaming transactions, including our silver sale agreement with Wheaton Precious Metals Corp. ("Wheaton"), refer to note 29.

Consolidation of Reko Diq

The Reko Diq project is 50% held by Barrick and 50% by Pakistani stakeholders, comprising a 10% free-carried, non-contributing share held by the Provincial Government of Balochistan, an additional 15% held by a special purpose company owned by the Provincial Government of Balochistan and 25% owned by other federal state-owned enterprises. Pursuant to the joint venture agreement, Barrick has power over the relevant activities of the project, including operatorship of the project, the decision to proceed with development of the project, subject to a sufficient expected rate of return, as well as development and approval of LOM plans. Therefore Barrick has concluded that it controls Reko Diq and it is consolidated in Barrick's consolidated financial statements with a 50% non-controlling interest.

Loulo-Goukoto

On June 16, 2025, Barrick lost control of the subsidiaries that hold our 80% interest in the Loulo-Goukoto mine in Mali when they were placed under a temporary provisional administration. As a result of this event in Q2 2025, we determined that we no longer had control of the mine and stopped consolidating it. As we retained legal ownership of 80% of the companies that hold the mine, we recognized an investment at fair value to reflect our retained interest until the temporary provisional administrator was removed and we regained control on December 16, 2025. As described in note 4a, we have determined that regaining control represents a business combination for no cash consideration with Barrick identified as the acquirer. To determine the fair value of the acquisition management is required to make estimates and assumptions with respect to future production levels, operating, capital and closure costs in our LOM plans, future metal prices, values of resources outside LOM plans and discount rates. Refer to note 35 for further details.

4. ACQUISITIONS AND DIVESTITURES

a) Loulo-Goukoto

On November 24, 2025, Barrick announced that an agreement had been entered into with the Government of the Republic of Mali to put an end to all disputes regarding the Loulo and Goukoto mines. The provisional administration of the Loulo-Goukoto complex was terminated on December 16, 2025, at which point operational control was handed back to Somilo and Goukoto's management. Refer to note 35 for further details.

We have determined that this represents a business combination with Barrick identified as the acquirer. We have determined the acquisition price should be equal to the fair value of Barrick's 80% investment in the equity of Société des Mines de Loulo SA ("Somilo") and Société des Mines de Goukoto SA ("Goukoto").

We have determined the fair value of Barrick's existing interest in Loulo-Goukoto immediately before the acquisition of control, which represents the fair value of the consideration in the transaction. We have also determined the fair value of the non-controlling interest and performed a provisional allocation of the purchase price to identified assets and liabilities.

The tables below present the provisional allocation of the purchase price to the assets and liabilities acquired. This allocation is provisional as we have not had sufficient time to complete the final analysis and allocation of fair values, primarily the property, plant and equipment, and we expect to complete this process in 2026.

(\$ millions)	
Fair value of Loulo-Goukoto (100%)	\$ 3,220
Fair value of Loulo-Goukoto (80%)	2,576
Provisional fair value allocation at acquisition	
Cash	\$ 71
Other current assets	154
Inventory	629
Property, plant and equipment	3,131
Other long-term assets	120
Total assets	\$ 4,105
Current liabilities	\$ 347
Deferred income tax liabilities	474
Lease liabilities	17
Provisions	47
Other liability to Loulo-Goukoto NCI	240
Total liabilities	\$ 1,125
Non-controlling interests	404
Net assets acquired	\$ 2,576

We primarily used a discounted cash flow model (being the net present value of expected future cash flows) to determine the fair value of the mining interests and used a depreciated replacement cost approach in determining the fair value of property, plant and equipment. Expected future cash flows are based on estimates of future gold prices inclusive of a \$3,000/oz long-term gold price and projected future revenues, estimated quantities of ore reserves and mineral resources, including expected conversions of resources to reserves, expected future production costs and capital expenditures based on the life of mine plans for the mines as at the acquisition date. A WACC of 16% was applied in the discounted cash flow model.

Since it has been consolidated from December 16, 2025, Loulo-Goukoto contributed revenue of \$505 million and net income of \$16 million for the year ended December 31, 2025. If the acquisition had occurred on January 1, 2025, consolidated revenue and consolidated net income would have been \$1,036 million and \$484 million, respectively. The fair value of accounts receivable was \$92 million (included in other current assets) as at December 16, 2025, which was equivalent to the contractual amount.

b) Tongon

On October 6, 2025, Barrick announced that it reached an agreement to sell its interests in the Tongon gold mine ("Tongon") and certain of its exploration properties in Côte d'Ivoire to the Atlantic Group for total consideration of up to \$305 million. The consideration is composed of cash consideration of \$192 million, inclusive of a \$23 million shareholder loan repayment within six months of closing, and contingent cash payments totaling up to \$113 million payable based on the price of gold over 2.5 years and resource conversions over 5 years. The transaction closed on December 1, 2025 and we recognized a gain on sale of \$134 million and contingent consideration of \$113 million in Q4 2025.

c) Hemlo

On September 11, 2025, Barrick announced that it reached an agreement to sell the Hemlo Gold Mine ("Hemlo") in Canada to Carcetti Capital Corp., which was renamed to Hemlo Mining Corp. ("HMC"). The sale agreement provides for gross proceeds of up to \$1.09 billion, consisting of \$875 million of cash proceeds due on closing, HMC shares with an aggregate value of \$50 million, and a production and tiered gold price-linked cash payment structure of up to \$165 million starting in January 2027 for a five-year term. The transaction closed on November 26, 2025 and we recognized a gain on sale of \$545 million and contingent consideration of \$22 million in Q4 2025.

d) Alturas

On August 8, 2025, Barrick announced that it reached an agreement to sell the Alturas Project in Chile to a subsidiary of Boroo Pte Ltd (Singapore) ("Boroo") for an up-front cash payment of \$50 million. In addition, Barrick was granted a 0.5% net smelter return royalty on gold and silver produced from the Project, which will terminate once 2 million ounces of gold and gold-equivalent have been produced. Boroo may repurchase the royalty within four years from closing for \$10 million. The transaction closed on November 7, 2025 and we recognized a gain on sale of \$53 million in Q4 2025.

e) Donlin Gold

On April 22, 2025, Barrick announced it entered into an agreement to sell its 50% interest in the Donlin Gold project located in Alaska, USA to affiliates of Paulson Advisers LLC and NOVAGOLD Resources Inc. ("NOVAGOLD") for total cash consideration of \$1 billion. In addition, Barrick has granted NOVAGOLD an option to purchase the outstanding debt owed to Barrick (value of \$168 million as at December 31, 2025, classified as FVPL and presented in Other Assets) in connection with the Donlin Gold project for \$90 million if purchased prior to closing, or for \$100 million if purchased within 18 months from closing, when the option expires. If that option is not exercised, the debt will remain outstanding, substantially in accordance with its existing terms which would largely defer repayment to the commencement of production.

The transaction closed on June 3, 2025 and we recognized a gain on sale of \$745 million in Q2 2025. In addition, NOVAGOLD did not exercise the option to purchase the outstanding debt owed to Barrick at closing, but retains the option to purchase the outstanding debt for \$100 million within 18 months from closing.

5. SEGMENT INFORMATION

Barrick's business is organized into fourteen minesites. Barrick's CODM (Mark Bristow, President and Chief Executive Officer until September 29, 2025 and Mark Hill, Group Chief Operating Officer and Interim President and Chief Executive Officer thereafter) reviews the operating results, assesses performance and makes capital allocation decisions at the minesite level. Our presentation of our reportable operating segments consists of eight gold mines (Carlin, Cortez, Turquoise Ridge, Pueblo Viejo, Loulo-Goukoto, Kibali, North Mara

and Bulyanhulu) and one copper mine (Lumwana). The remaining operating segments, including our remaining gold mines, have been grouped into an "Other Mines" category and will not be reported on individually. Segment performance is evaluated based on a number of measures including operating income before tax, production levels and unit production costs. Certain costs are managed on a consolidated basis and are therefore not reflected in segment income.

1 Segment capital expenditures are presented for internal management reporting purposes on an accrual basis. Capital expenditures in the consolidated statements of cash flow are presented on a cash basis. In 2025, cash expenditures were \$3,821 million (2024: \$3,174 million) and the decrease in accrued expenditures was \$19 million (2024: \$116 million increase).

6. REVENUE

For the years ended December 31	2025	2024
Gold sales		
Spot market sales	\$ 14,438	\$ 11,268
Concentrate sales	674	536
Provisional pricing adjustments	35	16
	\$ 15,147	\$ 11,820
Copper sales		
Copper concentrate sales	\$ 1,411	\$ 871
Provisional pricing adjustments	64	(16)
	\$ 1,475	\$ 855
Other sales¹	\$ 334	\$ 247
Total	\$ 16,956	\$ 12,922

1 Revenues from the sale of by-products from our gold and copper mines.

For the year ended December 31, 2025, the Company has three customers that individually account for more than 10% of the Company's total revenue. These customers represent approximately 26%, 12% and 11% of total revenue. However, because gold can be sold through numerous gold market traders worldwide (including a large number of financial institutions), the Company is not economically dependent on a limited number of customers for the sale of its product.

Principal Products

All of our gold mining operations produce gold in doré form, except Phoenix and Bulyanhulu, which produce both gold doré and gold concentrate. Gold doré is unrefined gold bullion bars usually consisting of 90% gold that is refined to pure gold bullion prior to sale to our customers. Concentrate is a semi-processed product containing the valuable metal minerals from which most of the waste mineral has been removed. Our Lumwana mine produces a concentrate (which primarily contains copper), and copper cathodes. Our Phoenix mine produces a concentrate that contains both gold and copper. Incidental revenues from the sale of by-products, primarily copper, silver and energy at our gold mines, are classified within other sales.

Provisional Copper and Gold Sales

We have provisionally priced sales for which price finalization, referenced to the relevant copper and gold index, is outstanding at the balance sheet date. Our exposure at December 31, 2025 to the impact of future movements in market commodity prices for provisionally priced sales is set out in the following table:

As at December 31	Volumes subject to final pricing		Impact on net income before taxation of 10% movement in market price	
	Copper (millions)	Gold (000s)	2025	2024
Copper pounds ¹	56	63	\$ 30	\$ 25
Gold ounces	29	48	13	13

1 Amounts in thousands of tonnes: 2025: 25; 2024: 28.

At December 31, 2025, our provisionally priced copper sales subject to final settlement were recorded at an average price of \$5.34/lb (2024: \$4.04/lb). At December 31, 2025, our provisionally priced gold sales subject to final settlement were recorded at an average price of \$4,337/oz (2024: \$2,636/oz). The sensitivities in the above tables have been determined as the impact of a 10% change in commodity prices at each reporting date, while holding all other variables, including foreign currency exchange rates, constant.

7. COST OF SALES

For the years ended December 31	Gold		Copper		Other ⁴		Total	
	2025	2024	2025	2024	2025	2024	2025	2024
Site operating cost ^{1,2,3}	\$ 5,056	\$ 5,068	\$ 477	\$ 389	\$ –	\$ –	\$ 5,533	\$ 5,457
Depreciation ¹	1,588	1,641	285	245	33	29	1,906	1,915
Royalty expense	540	405	108	67	–	–	648	472
Mining and production taxes ⁵	132	78	–	–	–	–	132	78
Community relations	41	34	5	5	–	–	46	39
Total	\$ 7,357	\$ 7,226	\$ 875	\$ 706	\$ 33	\$ 29	\$ 8,265	\$ 7,961

1 Site operating costs and depreciation include charges to reduce the cost of inventory to net realizable value of \$4 million (2024: \$48 million). Refer to note 17.

2 Site operating costs includes the costs of extracting by-products.

3 Includes employee costs of \$1,697 million (2024: \$1,664 million).

4 Other includes corporate amortization.

5 2024 figures have been changed to present mining and production taxes separately from site operating costs.

8. EXPLORATION, EVALUATION AND PROJECT EXPENSES

For the years ended December 31	2025	2024
Global exploration and evaluation ¹	\$ 220	\$ 153
Project costs:		
Reko Diq	11	126
Other	109	76
Minesite exploration and evaluation ¹	27	37
Total exploration, evaluation and project expenses	\$ 367	\$ 392

1 Approximates the impact on operating cash flow.

9. OTHER EXPENSE (INCOME)

For the years ended December 31	2025	2024
Other Expense:		
Severance costs	\$ 50	\$ –
Litigation legal expenses	72	25
Litigation settlement accruals	91	–
Loulo-Goukoto (note 35) ¹	625	84

International	(354)	444
	\$ (385)	\$ 448
Income tax expense	\$ 1,651	\$ 1,520

1 Includes adjustments to equalize the difference between prior year's tax return and the year-end provision.

Reconciliation to Canadian Statutory Rate

For the years ended December 31	2025	2024
At 26.5% statutory rate	\$ 2,334	\$ 1,221
Increase (decrease) due to:		
Allowances and special tax deductions ¹	(226)	(211)
Impact of foreign tax rates ²	(314)	18
Non-deductible expenses / (non-taxable income)	130	111
Loulo-Goukoto (note 35)	(324)	–
Goodwill impairment charges not tax deductible	–	145
Impact of non-current assets disposals	(258)	2
Net currency translation losses on current and deferred tax balances	41	52
Tax impact from pass-through entities and equity accounted investments	(535)	(263)
Current year tax results sheltered by previously unrecognized deferred tax assets	76	(5)
Recognition and derecognition of deferred tax assets	27	(26)
Settlements and adjustments in respect of prior years	2	116
Increase to income tax related contingent liabilities	(33)	1
Withholding taxes	160	70
Mining taxes	584	290
Tax impact of amounts recognized within accumulated OCI	(8)	–
Other items	(5)	(1)
Income tax expense	\$ 1,651	\$ 1,520

1 We are able to claim certain allowances, incentives and tax deductions unique to extractive industries that result in a lower effective tax rate.

2 We operate in multiple foreign tax jurisdictions that have tax rates different than the Canadian statutory rate.

Currency Translation

Current and deferred tax balances are subject to remeasurement for changes in foreign currency exchange rates each period. This is required in countries where tax is paid in local currency and the subsidiary has a different functional currency (typically US dollars). The most significant relate to Argentine and Malian tax balances.

In 2025, a tax recovery of \$26 million arose from net translation gains on deferred tax balances in Mali (prior to their deconsolidation) and Argentina due to the strengthening of the West African CFA, partially offset by the weakening of the Argentine peso against the US dollar. In 2024, a net tax expense of \$52 million arose from translation losses on tax balances, mainly due to the weakening of the Argentine peso and the West African CFA against the US dollar. These net translation losses are included within income tax expense.

Withholding Taxes

In 2025, we have recorded \$6 million (2024: \$3 million related to Saudi Arabia) of dividend withholding taxes related to the undistributed earnings of our subsidiaries in Saudi Arabia. We have also recorded \$139 million (2024: \$45 million related to Saudi Arabia, Peru and the United States) of dividend withholding taxes related to the distributed earnings of our subsidiaries in Argentina, Côte d'Ivoire, Saudi Arabia, Tanzania and the United States.

Recognition of Deferred Tax Assets

In 2025, we utilized previously unrecognized deferred tax assets in Canada in connection with the sale of Hemlo. The transaction has resulted in a taxable gain that provided sufficient Canadian taxable profit to support the utilization of a portion of previously unrecognized Canadian tax loss carryforwards.

Outside of this transaction, it remains not probable that sufficient future taxable profits will be available in Canada to utilize the remaining deferred tax assets. Accordingly, no additional tax loss carryforwards are expected to be utilized in Canada in the foreseeable future.

Sale of Non-Current Assets

In 2025, we completed the sale of the Alturas project and the Hemlo and Tongon mines (refer to note 4 for further information). Income tax expense for the year was not materially impacted by the gains on disposal of our interest in these assets. This was primarily attributable to the availability of previously unrecognized tax attributes alongside the non-taxable nature of certain capital disposals under local tax regimes. Consequently, these disposals represent a permanent difference between accounting profit and taxable income.

Nevada Gold Mines (“NGM”)

NGM is a limited liability company treated as a flow through partnership for US tax purposes. The partnership is not subject to federal income tax directly, but each of its partners is liable for tax on its share of the profits of the partnership. As such, Barrick accounts for its current and deferred income tax associated with the investment (61.5% share) following the principles outlined in IAS 12.

United States Tax Reform

Under the Inflation Reduction Act signed in August 2022, the United States implemented a 15% corporate alternative minimum tax (“CAMT”) on applicable financial statement income, effective for tax years beginning after December 31, 2022, with CAMT credit carryforwards having an indefinite life. Barrick is subject to CAMT as it meets the requisite income thresholds for a foreign-parented multi-national group.

While final regulations are still awaited, since its introduction, Barrick has recognized a deferred tax asset from the CAMT credit carryforwards anticipating recovery against future US Federal Income Tax liabilities.

Organisation for Economic Co-operation and Development (“OECD”) Pillar Two model rules

These rules apply to multinational enterprises with annual consolidated revenues of at least €750 million in at least two of the prior four fiscal years immediately preceding the relevant fiscal year, which is reflective of our status.

Canada enacted Pillar Two legislation in Q2 2024, effective for fiscal years commencing on or after December 31, 2023. Other jurisdictions in which the group operates have either enacted or are in the process of enacting similar legislation. On January 5, 2026, the OECD’s Inclusive Framework announced a package of administrative guidance including new safe harbors and an extension of the Transitional Country-by-Country Reporting Safe Harbor. The guidance is intended to provide compliance simplifications for multinational enterprises and will be incorporated into the Commentary to the Global Anti-Base Erosion Model Rules.

In terms of the income tax accounting, we have applied the exception available under the amendments to IAS 12 published by the IASB in May 2023 and are not recognizing or disclosing information about deferred tax assets and liabilities related to Pillar Two income taxes. Our review of Pillar Two for the current year, based on the OECD’s Transitional Safe Harbour rules as implemented in the Global Minimum Tax Act in Canada, has not identified any material amounts to be accrued for 2025. We have assessed the potential impact of these new safe harbors and do not expect the updates to result in a material incremental tax cost under the current application of the standard. As the law is evolving, both in Canada and elsewhere, we will continue to monitor the impact of this legislation.

Mining Taxes

In addition to corporate income tax, we pay mining taxes in the United States (Nevada), the Dominican Republic, and Canada (Ontario). NGM is subject to a Net Proceeds of Minerals tax in Nevada at a rate of 5% and the tax expense recorded in 2025 was \$282 million (2024: \$145 million). The other significant mining tax is the Dominican Republic’s Net Profits Interest tax, which is determined based on cash flows as defined by the Pueblo Viejo Special Lease Agreement. A tax expense of \$283 million (2024: \$134 million) was recorded for this in 2025. Both taxes are included on a consolidated basis in the Company’s consolidated statements of income.

Impairments

In 2025, we recorded net impairment charges of \$12 million (2024: net impairment reversals of \$941 million) for non-current assets. Refer to note 21 for further information.

A deferred tax expense of \$nil (2024: deferred tax expense of \$321 million primarily related to the impairment reversals at Lumwana and Veladero) was recorded.

13. EARNINGS PER SHARE

For the years ended December 31 (\$ millions, except shares in millions and per share amounts in dollars)	2025		2024	
	Basic	Diluted	Basic	Diluted
Net income	\$ 7,154	\$ 7,154	\$ 3,088	\$ 3,088

1 On January 2, 2025, an interim attachment order was issued by the Senior Investigating Judges of the Pôle National Économique et Financier (“Pôle Économique”) against the existing gold stock on the site of the Loulo-Gounkoto mining complex. On January 11, 2025, the gold was removed from the site to a custodial bank. This gold doré had a carrying value of \$92 million at the time of its removal and was included in finished products as at December 31, 2024. This gold doré was part of the acquired assets when Barrick regained control of the Loulo-Gounkoto mining complex on December 16, 2025 and was sold before the end of the 2025 year. Refer to notes 4 and 35 for further details.

2 Ore that we do not expect to process in the next 12 months is classified within other long-term assets.

1 Additions include \$31 million of right-of-use assets for lease arrangements entered into during the year ended December 31, 2025 (2024: \$20 million). Depreciation includes depreciation for leased right-of-use assets of \$15 million for the year ended December 31, 2025 (2024: \$17 million). The net carrying amount of leased right-of-use assets was \$45 million as at December 31, 2025 (2024: \$53 million).

2 Includes capitalized reserve acquisition costs, capitalized development costs and capitalized exploration and evaluation costs other than exploration license costs included in intangible assets.

3 Assets subject to depreciation include the following items for production stage properties: acquired mineral reserves and resources, capitalized mine development costs, capitalized stripping and capitalized exploration and evaluation costs.

4 Assets not subject to depreciation include construction-in-progress, projects and acquired mineral resources and exploration potential at operating minesites and development projects.

5 Additions include revisions to the capitalized cost of closure and rehabilitation activities.

6 Relates to the acquisition of our Loulo-Goukoto mine. Refer to notes 4 and 35 for further details.

7 Primarily relates to the divestment of our Hemlo and Tongon mines, Donlin Gold project and the deconsolidation of our Loulo-Goukoto mine upon loss of control. Refer to notes 4 and 35 for further details.

8 Primarily relates to non-current assets that are transferred between categories within PP&E once they are placed into service.

a) Mining Property Costs Not Subject to Depreciation

	Carrying amount at Dec. 31, 2025	Carrying amount at Dec. 31, 2024
Construction-in-progress ¹	\$ 2,190	\$ 1,856
Acquired mineral resources and exploration potential	53	53
Projects		
Pascua-Lama	721	725
Norte Abierto	701	686
Reko Diq	1,725	914
Donlin Gold	–	251
	\$ 5,390	\$ 4,485

1 Represents assets under construction at our operating minesites.

b) Changes in Gold and Copper Mineral Life of Mine Plan

As part of our annual business cycle, we prepare updated estimates of proven and probable gold and copper mineral reserves and the portion of resources considered probable of economic extraction for each mineral property. This forms the basis for our LOM plans. We prospectively revise calculations of amortization expense for property, plant and equipment amortized using the UOP method, where the denominator is our LOM ounces. The effect of changes in our LOM on amortization expense for 2025 was a \$10 million decrease (2024: \$21 million decrease).

c) Capital Commitments

In addition to entering into various operational commitments in the normal course of business, we had commitments of approximately \$2,329 million at December 31, 2025 (2024: \$605 million) for construction activities at our sites and projects.

d) Other Lease Disclosure

The Company leases various buildings, plant and equipment as part of the normal course of operations. Lease terms are negotiated on an individual basis and contain a wide range of different terms and conditions. Refer to note 25 for a lease maturity analysis. Included in net income for 2025 are short-term payments and variable lease payments not included in the measurement of lease liabilities of \$10 million (2024: \$9 million) and \$165 million (2024: \$203 million), respectively.

20. GOODWILL AND OTHER INTANGIBLE ASSETS

a) Intangible Assets

	Water rights ¹	Technology ²	Exploration potential ³	Total
Opening balance January 1, 2024	\$ 61	\$ 6	\$ 82	\$ 149
Amortization and impairment losses	–	(1)	–	(1)
Closing balance December 31, 2024	\$ 61	\$ 5	\$ 82	\$ 148
Amortization and impairment losses	–	–	–	–
Closing balance December 31, 2025	\$ 61	\$ 5	\$ 82	\$ 148
Cost	\$ 61	\$ 17	\$ 252	\$ 330
Accumulated amortization and impairment losses	–	(12)	(170)	(182)
Net carrying amount December 31, 2025	\$ 61	\$ 5	\$ 82	\$ 148

1 Relates to water rights in South America, and will be amortized through cost of sales when we begin using these in the future.

2 The amount is amortized through cost of sales using the UOP method over LOM ounces of the Pueblo Viejo mine, with no assumed residual value.

3 Exploration potential consists of the estimated fair value attributable to exploration licenses acquired as a result of a business combination or asset acquisition. The carrying value of the licenses will be transferred to PP&E when the development of attributable mineral resources commences.

b) Goodwill

	Closing balance December 31, 2024	Disposals	Closing balance December 31, 2025
Carlin	\$ 1,294	\$ –	\$ 1,294

Phoenix	119	–	119
Hemlo	63	(63)	–
Total	\$ 3,097	\$ (63)	\$ 3,034

On a total basis, the gross amount and accumulated impairment losses are as follows:

Cost	\$ 10,476
Accumulated impairment losses December 31, 2025	(7,442)
Net carrying amount December 31, 2025	\$ 3,034

21. IMPAIRMENT AND REVERSAL OF NON-CURRENT ASSETS

Summary of impairments (reversals)

For the year ended December 31, 2025, we recorded a net impairment of \$12 million (2024: net impairment reversal of \$941 million) for non-current assets and \$nil (2024: \$484 million) of impairment to goodwill, as summarized in the following table:

For the years ended December 31	2025	2024
Lumwana	\$ –	\$ (655)
Veladero	–	(437)
Carlin	6	82
Long Canyon	–	49
Pueblo Viejo	1	10
Cortez	4	9

Total impairment charges (reversals) of non-current assets	\$ 12	\$ (941)
Loulo-Goukoto goodwill	–	484
Total goodwill impairment charges	\$ –	\$ 484
Total impairment charges (reversals)	\$ 12	\$ (457)

2025 Indicators of Impairment and Reversals

In Q4 2025, as per our policy, we performed our annual goodwill impairment test as required by IAS 36 and identified no impairments. For certain CGUs a prior year calculation of the recoverable amount was used for the annual goodwill impairment test, since all criteria described in note 2o were satisfied (Carlin, Cortez and Turquoise Ridge used 2023 recoverable amount; Phoenix used 2024 recoverable amount). Also in Q4 2025, we reviewed the updated LOM plans for our other operating minesites for indicators of impairment or reversal.

2024 Indicators of Impairment and Reversals

In Q4 2024, as per our policy, we performed our annual goodwill impairment test as required by IAS 36 and identified a goodwill impairment at Loulo-Goukoto. For certain CGUs a prior year calculation of the recoverable amount was used for the annual goodwill impairment test, since all criteria described in note 2o were satisfied (Carlin, Cortez and Turquoise Ridge used 2023 recoverable amount). Also, in Q4 2024, we reviewed the updated LOM plans for our other operating minesites for indicators of impairment or reversal. We noted indicators of impairment reversal at our Lumwana and Veladero mines and of impairment at our Carlin and Long Canyon mines. The key assumptions used in these impairment assessments are detailed below.

Loulo-Gounkoto

The Company and the Government of Mali had been engaged in an ongoing dispute over the existing mining conventions of Somilo and Gounkoto (together, the “Conventions”). On January 14, 2025, due to the restrictions imposed by the Government of Mali on gold shipments, the Company announced that the Loulo-Gounkoto mining complex would temporarily suspend operations (refer to note 35 for more information). In Q4 2024, we determined that the carrying value of \$3,564 million exceeded the FVLCD. We recorded a goodwill impairment of \$484 million based on a FVLCD of \$3,080 million.

Lumwana

In Q4 2024, we updated the LOM plan for Lumwana and we observed an increase in the mine’s discounted cash flows reflecting the increased confidence of the Super Pit Expansion following the completion of the feasibility study and higher copper price assumptions. We determined that this was an indicator of impairment reversal and concluded that the mine’s FVLCD exceeded its carrying value. We recorded a partial non-current asset impairment reversal of \$655 million.

Veladero

In Q4 2024, we updated the LOM plan for Veladero and we observed an increase in the mine’s discounted cash flows reflecting higher gold prices and a decrease in the WACC primarily due to lower country risk. We determined that this was an indicator of impairment reversal and concluded that the mine’s FVLCD exceeded its carrying value and we recorded a non-current asset impairment reversal of \$437 million, which represents a full reversal of the non-current asset impairments recorded in 2018 and 2022.

Carlin

In Q4 2024, we updated the LOM plan for Carlin and identified that due to a change in the mine plan, an area of the Goldstrike open pit was no longer economic to be mined. As a result, we identified a non-current asset impairment of \$82 million related to a capitalized stripping asset that no longer had a future benefit.

Long Canyon

In Q4 2024, we decided to place the mine in closure and remove the associated mineral resources from our December 31, 2024 Mineral Reserves and Resources statement. As a result, we identified a non-current asset impairment of \$49 million on assets that no longer had a future benefit.

Key Assumptions

Recoverable amount has been determined based on the estimated FVLCD, which has been determined to be greater than the VIU amounts. The key assumptions and estimates used in determining the FVLCD are related to future metal prices, WACC, NAV multiples for gold assets, operating costs, capital expenditures, closure costs, future production levels, continued license to operate, and the expected start of production for our projects. In addition, assumptions are related to observable market evaluation metrics, including identification of comparable entities, and associated market values per ounce or per pound of reserves and/or resources, as well as the fair value of mineral resources outside of LOM plans.

Gold

For the gold CGUs where a recoverable amount was required to be determined, FVLCD was determined by calculating the net present value (“NPV”) of the future cash flows expected to be generated by the mines and projects within the CGU (Level 3 of the fair value hierarchy). The estimates of future cash flows were derived from the LOM plans and, where the LOM plans exclude a material portion of total reserves and resources, we assign value to resources not considered in these models. Based on observable market or publicly available data, including equity sell-side analyst forecasts, we make an assumption of future gold, copper and silver prices to estimate future revenues. The future cash flows for each gold mine are discounted using a real WACC, which reflects specific market risk factors for each mine. Some gold companies trade at a market capitalization greater than the NPV of their expected cash flows. Market participants describe this as a “NAV multiple”, which represents the multiple applied to the NPV to arrive at the trading price. The NAV multiple is generally understood to take account of a variety of additional value factors such as the exploration potential of the mineral property, namely the ability to find and produce more metal than what is currently included in the LOM plan or reserve and resource estimates, and the benefit of gold price optionality. As a result, we applied a specific NAV multiple to the NPV of each CGU within each gold segment based on the NAV multiples observed in the market in recent periods and that we judged to be appropriate to the CGU.

Copper

For the copper CGU where a recoverable amount was required to be determined, FVLCD was determined by calculating the NPV of the future cash flows expected to be generated by the mine and projects within the CGU (Level 3 of the fair value hierarchy). The estimates of future cash flows were derived from the LOM plans, and may include value attributed to potential projects that would have value to a market participant. Based on observable market or publicly available data, including equity sell-side analyst forecasts, we make an assumption of future copper prices to estimate future revenues. The future cash flows for each copper mine are discounted using a real WACC, which reflects specific market risk factors for each mine.

Assumptions

The short-term and long-term gold and copper price assumptions used in our fourth quarter 2025 and 2024 impairment testing are as follows:

	2025	2024
Gold price per oz (short-term)	\$ 3,800	\$ 2,400
Gold price per oz (long-term)	3,000	1,850
Copper price per lb (short-term)	4.80	4.25
Copper price per lb (long-term)	4.40	4.00

Neither the increase in the long-term gold price nor long-term copper price assumption from 2024 were considered an indicator of impairment reversal as the increased price would not, in isolation, have resulted in the identification of an impairment reversal at our CGUs with reversible impairments. The other key assumptions used in our impairment testing, based on the CGUs tested in each year, are summarized in the following table:

	2025	2024
WACC – gold (range)	5% – 8%	5% – 9%
WACC – gold (avg)	6%	6%
WACC – copper	9%	12%
NAV multiple – gold (avg)	1.2	1.2
LOM years – gold (avg)	24	21

Sensitivities

Should there be a significant increase or decline in commodity prices, we would take actions to assess the implications on our LOM plans, including the determination of reserves and resources, and the appropriate cost structure for the CGU. The recoverable amount of the CGU would be affected by these changes and also be impacted by other market factors such as changes in NAV multiples and the value per ounce or pound of comparable market entities.

We performed a sensitivity analysis on each gold CGU that was tested for impairment, as well as those gold CGUs which we believe are most sensitive to changes in the key assumptions. We flexed the gold prices, WACC and NAV multiple, which are the most significant assumptions that impact the impairment calculations. We first assumed a +/- \$100 per ounce change in our gold price assumptions, while holding all other assumptions constant. We then assumed a +/-1% change in our WACC, independent from the change in gold prices, while holding all other assumptions constant. Finally, we assumed a +/- 0.1 change in the NAV multiple, while holding all other assumptions constant. These sensitivities help to determine the theoretical impairment losses that would be recorded with these changes in gold prices, WACC and NAV multiple. None of those changes would result in an impairment loss.

We also performed a sensitivity analysis on Zaldivar. We flexed the copper prices and the WACC, which are the most significant assumptions that impact the impairment calculations. We first assumed a +/- \$0.25 per pound change in our copper price assumptions, while holding all other assumptions constant. We then assumed a +/-1% change in our WACC, independent from the change in copper prices, while holding all other assumptions constant. These sensitivities help to determine the theoretical impairment losses that would be recorded with these changes in copper prices and WACC. If the copper price per pound was decreased by \$0.25, a non-current asset impairment of \$108 million would have been recognized. No other changes would result in an impairment loss.

The carrying value of the CGUs that are most sensitive to changes in the key assumptions used in the FVLCD calculation are:

As at December 31, 2025	Carrying Value
Loulo-Goukoto	\$ 2,522
Kibali ¹	2,484
Lumwana	2,767
Zaldivar	849

1 Kibali's carrying value is comprised of the equity investment and JV receivable.

22. OTHER ASSETS

	As at Dec. 31, 2025	As at Dec. 31, 2024
Value added taxes receivable ¹	\$ 192	\$ 222
Other investments ²	131	42
Notes receivable ³	247	217
Norte Abierto JV partner receivable and contingent consideration	71	51
Restricted cash ⁴	101	65
Contingent consideration ⁵	169	–
Kibali JV receivable ⁶	200	202
Prepayments ⁷	317	234
PV resettlement receivable	164	86
Other	181	176
	\$ 1,773	\$ 1,295

1 Includes VAT and fuel tax receivables of \$114 in Mali, \$4 million in Argentina, \$1 million in Tanzania, \$55 million in Chile and \$18 million in Peru. (Dec. 31, 2024: \$100 million, \$6 million, \$69 million, \$47 million, and \$nil, respectively).

2 Includes equity investments in other mining companies.

3 Primarily represents the interest bearing promissory note due from NOVAGOLD.

4 Primarily represents the cash balance at Pueblo Viejo that is contractually restricted in respect of disbursements for environmental rehabilitation, which are expected to occur near the end of Pueblo Viejo's mine life.

5 Primarily includes contingent consideration relating to the divestments of the Tongon mine, Hemlo mine and Alturas project. Refer to note 4 for further details.

6 Refer to note 16 for further details.

7 Primarily relates to prepaid royalties at Carlin and Pueblo Viejo.

23. ACCOUNTS PAYABLE

	As at Dec. 31, 2025	As at Dec. 31, 2024
Accounts payable	\$ 646	\$ 655
Accruals	905	673
Payroll accruals	308	285
	\$ 1,859	\$ 1,613

24. OTHER CURRENT LIABILITIES

	As at Dec. 31, 2025	As at Dec. 31, 2024
Provision for environmental rehabilitation (note 27b)	\$ 181	\$ 226
Deposit on Pueblo Viejo gold and silver streaming agreement	36	40
Share-based payments (note 34)	192	54
Derivative liabilities (note 25c)	89	–
Pueblo Viejo JV partner shareholder loan (note 29)	52	60
Other	166	80
	\$ 716	\$ 460

25. FINANCIAL INSTRUMENTS

Financial instruments include cash; evidence of ownership in an entity; or a contract that imposes an obligation on one party and conveys a right to a second entity to deliver/receive cash or another financial instrument. Information on certain types of financial instruments is included elsewhere in these consolidated financial statements as follows: accounts receivable (note 18); and restricted share units (note 34a).

a) Cash and Equivalents

Cash and equivalents include cash, term deposits, treasury bills and money market investments with original maturities of less than 90 days.

	As at Dec. 31, 2025	As at Dec. 31, 2024
Cash deposits	\$ 5,369	\$ 3,120
Term deposits	1,337	954
	\$ 6,706	\$ 4,074

Of total cash and cash equivalents as of December 31, 2025, \$nil (2024: \$nil) was held in subsidiaries which have regulatory or contractual restrictions or operate in countries where exchange controls and other legal restrictions apply and are therefore not available for general use by the Company.

1 The agreements that govern our long-term debt each contain various provisions which are not summarized herein. These provisions allow Barrick, at its option, to redeem indebtedness prior to maturity at specified prices and also may permit redemption of debt by Barrick upon the occurrence of certain specified changes in tax legislation.

2 Amortization of debt premium/discount and increases (decreases) in capital leases.

3 Consists of \$850 million (2024: \$850 million) of our wholly-owned subsidiary Barrick North America Finance LLC ("BNAF") notes due 2041.

4 Consists of \$375 million (2024: \$375 million) of 5.25% notes which mature in 2042.

5 Consists of \$400 million (2024: \$400 million) of 5.80% notes which mature in 2034.

6 Consists of \$600 million (2024: \$600 million) of 6.35% notes which mature in 2036.

7 Consists of \$1.1 billion (2024: \$1.1 billion) in conjunction with our wholly-owned subsidiary BNAF and our wholly-owned subsidiary Barrick (PD) Australia Finance Pty Ltd. ("BPDAF"). This consists of \$250 million (2024: \$250 million) of BNAF notes due 2038 and \$805 million (2024: \$807 million) of BPDAF notes due 2039.

8 Consists primarily of leases at Nevada Gold Mines, \$9 million, Loulo-Goukoto, \$17 million, Veladero, \$2 million, Lumwana, \$1 million, Hemlo, \$nil, North Mara, \$4 million, Tongon, \$nil, and Reko Diq, \$9 million (2024: \$12 million, \$18 million, \$2 million, \$1 million, \$9 million, \$4 million, \$5 million, \$nil, respectively).

9 Consists of \$850 million (2024: \$850 million) in conjunction with our wholly-owned subsidiary BNAF.

10 We provide an unconditional and irrevocable guarantee on all BNAF, BPDAF, Barrick Gold Finance Company ("BGFC"), and Barrick (HMC) Mining ("BHMC") notes and generally provide such guarantees on all BNAF, BPDAF, BGFC, and BHMC notes issued, which rank equally with our other unsecured and unsubordinated obligations.

11 The current portion of long-term debt consists of \$9 million of leases (2024: \$13 million) and \$47 million of other debt obligations (2024: \$11 million).

5.7% Notes

In June 2011, BNAF issued an aggregate of \$4.0 billion in debt securities including \$850 million of 5.70% notes that mature in 2041 issued by BNAF (collectively, the “BNAF Notes”). Barrick provides an unconditional and irrevocable guarantee of the BNAF Notes, which rank equally with Barrick’s other unsecured and unsubordinated obligations.

5.25% Notes

On April 3, 2012, we issued an aggregate of \$2 billion in debt securities including \$750 million of 5.25% notes that mature in 2042. During 2022, \$375 million of the 5.25% notes was repaid.

Other Fixed Rate Notes

On October 16, 2009, we issued debentures through our wholly-owned indirect subsidiary BPDF consisting of \$850 million of 30-year notes with a coupon rate of 5.95%. We also provide an unconditional and irrevocable guarantee of these payments, which rank equally with our other unsecured and unsubordinated obligations. During 2023, \$43 million of the 5.95% notes was repaid. During 2025, \$2 million of the 5.95% notes was repaid.

In September 2008, we issued an aggregate of \$1.25 billion of notes through our wholly-owned indirect subsidiaries BNAF and BGFC including \$250 million of 30-year notes with a coupon rate of 7.5%. We also provide an unconditional and irrevocable guarantee of these payments, which rank equally with our other unsecured and unsubordinated obligations.

5.75% Notes

On May 2, 2013, we issued an aggregate of \$3 billion in notes through Barrick and our wholly-owned indirect subsidiary BNAF including \$850 million of 5.75% notes issued by BNAF that mature in 2043. \$2 billion of the net proceeds from this offering was used to repay amounts outstanding under our revolving Credit Facility at that time. We provide an unconditional and irrevocable guarantee on the \$850 million of 5.75% notes issued by BNAF, which rank equally with our other unsecured and unsubordinated obligations.

Credit Facility

In May 2025, we completed an update of the credit and guarantee agreement (the “Credit Facility”) with certain Lenders, which requires such Lenders to make available to us a credit facility of \$3.0 billion or the equivalent amount in Canadian dollars. The Credit Facility, which is unsecured, currently has an interest rate of Secured Overnight Financing Rate (“SOFR”) plus 1.00% on drawn amounts, and a standby rate of 0.09% on undrawn amounts. The Credit Facility incorporates sustainability-linked metrics which are made up of annual environmental and social performance targets directly influenced by Barrick’s actions, rather than based on external ratings. The performance targets include Scope 1 and Scope 2 greenhouse gas emissions intensity, water use efficiency (reuse and recycling rates), and total recordable injury frequency rate. Barrick may incur positive or negative pricing adjustments on drawn credit spreads and standby fees based on its sustainability performance versus the targets that have been set. As part of the update, the termination date of the Credit Facility was extended from May 2029 to May 2030. The Credit Facility was undrawn as at December 31, 2025.

Interest

For the years ended December 31	2025		2024

3 Included in Other fixed rate notes in the Long-Term Debt table.

c) Derivative Instruments (“Derivatives”)

In the normal course of business, our assets, liabilities and forecasted transactions, as reported in US dollars, are impacted by various market risks including, but not limited to:

Item	Impacted by
• Revenue	• Prices of gold, silver and copper
• Cost of sales	
• Consumption of diesel fuel, propane, natural gas, and electricity	• Prices of diesel fuel, propane, natural gas, and electricity
• Non-US dollar expenditures	• Currency exchange rates – US dollar versus A\$, ARS, C\$, DOP, EUR, TZS, XOF, ZAR and ZMW
• General and administration, exploration and evaluation costs	• Currency exchange rates – US dollar versus A\$, ARS, C\$, DOP, GBP, PKR, TZS, XOF, ZAR, and ZMW
• Capital expenditures	
• Non-US dollar capital expenditures	• Currency exchange rates – US dollar versus A\$, ARS, C\$, DOP, EUR, GBP, PKR, TZS, XOF, ZAR, and ZMW
• Consumption of steel	• Price of steel
• Interest earned on cash and equivalents	• US dollar interest rates
• Interest paid on fixed-rate borrowings	• US dollar interest rates

The time frame and manner in which we manage those risks varies for each item based upon our assessment of the risk and available alternatives for mitigating risk. For these particular risks, we believe that derivatives are an appropriate way of managing the risk.

We use derivatives as part of our risk management program to mitigate variability associated with changing market values related to the hedged item. Many of the derivatives we use meet the hedge effectiveness criteria and are designated in a hedge accounting relationship.

Certain derivatives are designated as either hedges of the fair value of recognized assets or liabilities or of firm commitments (“fair value hedges”) or hedges of highly probable forecasted transactions (“cash flow hedges”), collectively known as “accounting hedges”. Hedges that are expected to be highly effective in achieving offsetting changes in fair value or cash flows are assessed on an ongoing basis to determine that they actually have been highly effective throughout the financial reporting periods for which they were designated. Some of the derivatives we use are effective in achieving our risk management objectives, but they do not meet the strict hedge accounting criteria. These derivatives are considered to be “non-hedge derivatives”.

During 2024, we did not enter into any derivative contracts for US dollar interest rates, currencies, metals or commodity inputs.

During 2025, we entered into 25,000 ounces of zero cost gold collars that mature every month between September 2025 and August 2028 for a total of 900,000 ounces. These contracts contain purchased put and sold call options with strike prices of \$3,100/oz and \$4,310/oz, respectively. They are designated as cash flow hedges, with the effective portion of the hedge recognized in other comprehensive income (loss) and the ineffective portion recognized as loss (gain) on non-hedge derivatives. The realized loss (gain) related to these positions is \$nil for 2025 (2024: \$nil). As at December 31, 2025, the fair value of the remaining derivatives is a loss of \$386 million (December 31, 2024: \$nil), with \$89 million recorded as other current liabilities and \$297 million recorded as other non-current liabilities (December 31, 2024: \$nil and \$nil, respectively). As at December 31, 2025, 800,000 ounces of gold collars remain outstanding.

26. FAIR VALUE MEASUREMENTS

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value hierarchy establishes three levels to classify the inputs to valuation techniques used to measure fair value. Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities. Level 2 inputs are quoted prices in markets that are not active, quoted prices for similar assets or liabilities in active markets, inputs other than quoted prices that are observable for the

asset or liability (for example, interest rate and yield curves observable at commonly quoted intervals, forward pricing curves used to value currency and commodity contracts and volatility measurements used to value option contracts), or inputs that are derived principally from or corroborated by observable market data or other means. Level 3 inputs are unobservable (supported by little or no market activity). The fair value hierarchy gives the highest priority to Level 1 inputs and the lowest priority to Level 3 inputs.

a) Assets and Liabilities Measured at Fair Value on a Recurring Basis

	\$ 5,892	\$ 6,159	\$ 5,324	\$ 5,416

1 Includes restricted cash and amounts due from our partners and joint ventures.

2 Includes equity investments in other mining companies. Recorded at fair value. Quoted market prices are used to determine fair value.

3 2025 primarily includes contingent consideration relating to the Tongon mine, Norte Abierto project, Hemlo mine and Alturas project. 2024 primarily includes contingent consideration relating to the Norte Abierto project and have been changed to include contingent consideration.

4 Debt is generally recorded at amortized cost. The fair value of debt is primarily determined using quoted market prices. Balance includes both current and long-term portions of debt.

5 Refer to note 25 for further details.

The fair values of the Company's remaining financial assets and liabilities, which include cash and equivalents, accounts receivable and trade and other payables, approximate their carrying values due to their short-term nature. We do not offset financial assets with financial liabilities.

c) Assets Measured at Fair Value Valuation Techniques

Receivables from Provisional Copper and Gold Sales

The fair value of receivables arising from copper and gold sales contracts that contain provisional pricing mechanisms is determined using the appropriate quoted forward price from the exchange that is the principal active market for the particular metal. As such, these receivables, which meet the definition of an embedded derivative, are classified within Level 2 of the fair value hierarchy.

Other Long-Term Assets

The fair value of property, plant and equipment, goodwill, intangibles and other assets is determined primarily using an income approach based on unobservable cash flows, and as a result is classified within Level 3 of the fair value hierarchy. Refer to note 21 for disclosure of inputs used to develop these measures.

Contingent Consideration

The fair value of contingent consideration is determined based on unobservable production and/or resource conversion, and as a result is classified within Level 3 of the fair value hierarchy. The significant unobservable input used is forecasted gold prices, which ranged from \$2,700/oz to \$3,965/oz in 2025 (2024: \$1,500/oz). The higher the forecasted gold price, the higher the fair value.

Derivative Instruments

The fair value of derivative instruments is determined using option pricing models that utilize a variety of inputs that are a combination of quoted prices and market-corroborated inputs. As a result, the derivative instruments are classified within Level 2 of the fair value hierarchy.

27. PROVISIONS

a) Provisions

	As at Dec. 31, 2025	As at Dec. 31, 2024
Environmental rehabilitation ("PER")	\$ 1,602	\$ 1,751
Post-retirement benefits	33	34
Share-based payments (note 34)	50	23
Other employee benefits	30	32
Other	131	122
	\$ 1,846	\$ 1,962

b) Environmental Rehabilitation

	2025	2024
At January 1	\$ 1,977	\$ 2,153
PERs divested during the year ¹	(103)	–
Closed Sites		
Impact of revisions to expected cash flows recorded in earnings	(16)	38
Settlements		
Cash payments	(99)	(121)
Settlement gains	(6)	(10)
Accretion	42	41
Operating Sites		
PER revisions in the year	26	(92)
Settlements		
Cash payments	(79)	(76)
Settlement gains	(6)	(4)
Accretion	47	48
At December 31	\$ 1,783	\$ 1,977
Current portion (note 24)	(181)	(226)
	\$ 1,602	\$ 1,751

¹ 2025 primarily relates to the divestment of our Hemlo and Tongon mines (refer to note 4 for further details).

The eventual settlement of substantially all PERs estimated is expected to take place between 2026 and 2065.

The total PER has decreased in Q4 2025 by \$44 million primarily due to spending incurred during the quarter, combined with an increase in the discount rate, partially offset by the acquisition of Loulo-Goukoto after control was obtained in Q4 (refer to note 35 for details) and accretion. For the year ended December 31, 2025, our PER balance decreased by \$194 million primarily due to spending incurred during the year, combined with the divestment of Hemlo and Tongon (refer to note 4 for further details), partially offset by accretion. A 1% increase in the discount rate would result in a decrease in the PER by \$196 million and a 1% decrease in the discount rate would result in an increase in the PER by \$242 million, while holding the other assumptions constant.

28. FINANCIAL RISK MANAGEMENT

Our financial instruments are comprised of financial liabilities and financial assets. Our principal financial liabilities, other than derivatives, comprise accounts payable and debt. The main purpose of these financial instruments is to manage short-term cash flow and raise funds for our capital expenditure program. Our principal financial assets, other than derivative instruments, are cash and equivalents, restricted cash, contingent consideration, accounts receivable, notes receivable, JV receivable and JV partner receivable, which arise directly from our operations. In the normal course of business, we use derivative instruments to mitigate exposure to various financial risks.

We manage our exposure to key financial risks in accordance with our financial risk management policy. The objective of the policy is to support the delivery of our financial targets while protecting future financial security. The main risks that could adversely affect our financial assets, liabilities or future cash flows are as follows:

- Market risk, including commodity price risk, foreign currency and interest rate risk;
- Credit risk;
- Liquidity risk; and
- Capital risk management.

Management designs strategies for managing each of these risks, which are summarized below. Our senior management oversees the management of financial risks, ensuring that our financial risk-taking activities are governed by policies and procedures and that financial risks are identified, measured and managed in accordance with our policies and our risk appetite. All derivative activities for risk management purposes are carried out by the appropriate personnel.

a) Market Risk

Market risk is the risk that changes in market factors, such as commodity prices, foreign exchange rates or interest rates, will affect the value of our financial instruments. We manage market risk by either accepting it or mitigating it through the use of derivatives and other economic hedging strategies.

Commodity Price Risk

Gold and Copper

We sell our gold and copper production in the world market. The market prices of gold and copper are the primary drivers of our profitability and ability to generate both operating and free cash flow. Our corporate treasury group may implement hedging strategies on an opportunistic basis to protect us from downside price risk on our gold and copper production. We have 800,000 ounces of gold collars outstanding as at December 31, 2025. We did not enter into any positions during 2024. Our remaining gold and copper production is subject to market prices.

Fuel

We consume diesel fuel and natural gas to run our operations. Diesel fuel is refined from crude oil and is therefore subject to the same price volatility affecting crude oil prices. Therefore, volatility in crude oil and natural gas prices have a direct and indirect impact on our production costs.

Foreign Currency Risk

The functional and reporting currency for all of our operating segments is the US dollar and we report our results using the US dollar. The majority of our operating and capital expenditures are denominated and settled in US dollars. We have exposure to the Argentine peso through operating costs at our Veladero mine, and peso denominated VAT receivable balances. We also have exposure to the Canadian and Australian dollars, Zambian kwacha, Tanzanian shilling, Dominican peso, West African CFA franc, Euro, South African rand, and British pound through mine operating, administration, and capital costs. In addition, we also have exposure to the Pakistan rupee through project costs and capital costs on Reko Diq. Consequently, fluctuations in the US dollar exchange rate against these currencies increase the volatility of cost of sales, general and administrative costs, project costs and overall net earnings, when translated into US dollars.

Interest Rate Risk

Interest rate risk refers to the risk that the value of a financial instrument or cash flows associated with the instruments will fluctuate due to changes in market interest rates. Currently, our interest rate exposure mainly relates to interest receipts on our cash balances (\$6.7 billion as at December 31, 2025); the mark-to-market value of derivative instruments; and to the interest payments on our variable-rate debt (\$0.05 billion as at December 31, 2025).

The effect on net earnings and equity of a 1% change in the interest rate of our financial assets and liabilities as at December 31, 2025 is approximately \$30 million (2024: \$30 million).

b) Credit Risk

Credit risk is the risk that a third party might fail to fulfill its performance obligations under the terms of a financial instrument. Credit risk arises from cash and equivalents, restricted cash, contingent consideration, notes receivable, JV receivable, JV partner receivable, accounts receivable, as well as derivative assets. To mitigate our inherent exposure to credit risk on all financial assets listed above (other than derivative assets) we maintain policies to limit the concentration of credit risk, review counterparty creditworthiness on a monthly basis, and ensure liquidity of available funds. We also invest our excess cash and equivalents in highly rated financial institutions, primarily within the United States and Canada. Furthermore, we sell our gold and copper production into the world market and to financial institutions and private customers with strong credit ratings. Historically, customer defaults have not had a significant impact on our operating results or financial position.

The Company's maximum exposure to credit risk at the reporting date is the carrying value of each of the financial assets, excluding derivative assets, disclosed as follows:

	As at Dec. 31, 2025	As at Dec. 31, 2024
Cash and equivalents	\$ 6,706	\$ 4,074
Accounts receivable	791	763
Contingent consideration	169	–
Notes receivable	247	217
Kibali JV receivable	333	462
Norte Abierto JV partner receivable and contingent consideration	77	74
Restricted cash	101	65
Other assets	\$ 218	\$ 122
	\$ 8,642	\$ 5,777

c) Liquidity Risk

Liquidity risk is the risk of loss from not having access to sufficient funds to meet both expected and unexpected cash demands. We manage our exposure to liquidity risk by maintaining cash reserves, access to undrawn credit facilities and access to public debt markets, by staggering the maturities of outstanding debt instruments to mitigate refinancing risk and by monitoring of forecasted and actual cash flows. Details of the undrawn Credit Facility are included in note 25.

Our capital structure comprises a mix of debt, non-controlling interest and shareholders' equity. As at December 31, 2025, our total debt was \$4.7 billion (debt net of cash and equivalents was \$(2.0) billion) compared to total debt as at December 31, 2024 of \$4.7 billion (debt net of cash and equivalents was \$655 million).

Our operating cash flow is dependent on the ability of our operations to deliver projected future cash flows. The market prices of gold, and to a lesser extent copper, are the primary drivers of our operating cash flow. Other options to enhance liquidity include further portfolio optimization; issuance of equity or long-term debt securities in the public markets or to private investors (Moody's and S&P currently rate Barrick's outstanding long-term debt as investment grade, with ratings of A3 and BBB+, respectively); and drawing on the \$3.0 billion available under our undrawn Credit Facility (subject to compliance with covenants and the making of certain representations and warranties, this facility is available for drawdown as a source of financing). The key financial covenant in the Credit Facility (undrawn as at December 31, 2025) requires Barrick to maintain a net debt to total capitalization ratio, as defined in the agreement, of 0.60:1 or lower (Barrick's net debt to total capitalization ratio was (0.06):1 as at December 31, 2025).

The following table outlines the expected maturity of our significant financial assets and liabilities into relevant maturity groupings based on the remaining period from the balance sheet date to the contractual maturity date. As the amounts presented in the table are the contractual undiscounted cash flows, these balances may not agree with the amounts disclosed in the balance sheet.

As at December 31, 2025 (in \$ millions)	Less than 1 year	1 to 3 years	3 to 5 years	Over 5 years	Total
Cash and equivalents	\$ 6,706	\$ –	\$ –	\$ –	\$ 6,706

Other liabilities	85	167	97	246	595

d) Capital Risk Management

Our objective when managing capital is to provide value for shareholders by maintaining an optimal short-term and long-term capital structure in order to reduce the overall cost of capital while preserving our ability to continue as a going concern. Our capital management objectives are to safeguard our ability to support our operating requirements on an ongoing basis, continue the development and exploration of our mineral properties and support any expansion plans. Our objectives are also to ensure that we maintain a strong balance sheet and optimize the use of debt and equity to support our business and maintain financial flexibility in order to provide meaningful returns to shareholders and maximize shareholder value. We define capital as total debt less cash and equivalents and it is managed by management subject to approved policies and limits by the Board of Directors. We have no significant financial covenants or capital requirements with our lenders or other parties other than what is discussed under Liquidity Risk in note 28c.

29. OTHER NON-CURRENT LIABILITIES

	As at Dec. 31, 2025	As at Dec. 31, 2024
Deposit on Pascua-Lama silver sale agreement	\$ 172	\$ 167
Deposit on Pueblo Viejo gold and silver streaming agreement ¹	371	408
Long-term income tax payable	100	80
Derivative liabilities (note 25c)	297	–
Other liability to Loulo-Gounkoto NCI ²	240	–

Pueblo Viejo JV partner shareholder loan	406	407
Provision for offsite remediation	37	36
Other	14	16
	\$ 1,687	\$ 1,174

1 Revenues of \$59 million were recognized in 2025 (2024: \$30 million) through the drawdown of our streaming liabilities relating to a contract in place at Pueblo Viejo.

2 Refer to note 35 for further details.

Government of Tanzania Shareholder Loan

On January 24, 2020, Barrick formalized the establishment of a joint venture between Barrick and the Government of Tanzania (“GoT”). Effective January 1, 2020, the GoT received a 16% interest in the shareholder loans owed by Bulyanhulu and Buzwagi, of which \$167 million was payable to the GoT. During 2023, \$37 million was offset against VAT receivables. During 2025 and 2024, a \$10 million and \$22 million reduction, respectively, in the outstanding balance was recorded against other income as part of the economic benefits sharing under the Twiga partnership.

Pueblo Viejo Shareholder Loan

In November 2020, Pueblo Viejo entered into a \$1.3 billion loan facility agreement with its shareholders (the “First PV Shareholder Loan”) to provide long-term financing to expand the mine. The shareholders lend funds pro rata in accordance with their shareholding in Pueblo Viejo. In October 2024, Pueblo Viejo entered into an additional \$0.8 billion loan facility agreement with its shareholders (the “Second PV Shareholder Loan”).

The First PV Shareholder Loan is broken up into two facilities: \$0.8 billion of funds that could be drawn on a pro rata basis until June 30, 2022 (“Facility I”) and \$0.5 billion of funds that could be drawn on a pro rata basis until June 30, 2025 (“Facility II”). During 2022, the drawing period for Facility I was extended to December 31, 2022. Starting in 2023, amortized repayments for Facility I began twice yearly on the scheduled repayment dates, with a final maturity date of February 28, 2032. Amortized repayments for Facility II are due to begin twice yearly on the scheduled repayment dates after June 30, 2025, with a final maturity date of February 28, 2035. The interest rate on drawn amounts is SOFR plus 400 basis points for Facility I and Facility II.

The Second PV Shareholder Loan consists of \$0.8 billion of funds that can be drawn on a pro rata basis until June 30, 2029. Amortized repayments for the Second PV Shareholder Loan are due to begin twice yearly on the scheduled repayment dates after June 30, 2029, with a final maturity date of February 15, 2039. The interest rate on drawn amounts is SOFR plus 381 basis points for the Second PV Shareholder Loan.

During 2022, 2021 and 2020, \$369 million, \$327 million and \$104 million, respectively, were drawn on Facility I, fully drawing it down, including \$147 million, \$131 million and \$42 million, respectively, from Barrick’s Pueblo Viejo JV partner. During 2025, 2024 and 2023, \$80 million, \$80 million and \$80 million, respectively, was repaid on Facility I, including \$32 million, \$32 million and \$32 million, respectively, from Barrick’s Pueblo Viejo JV partner.

During 2025, 2024, 2023 and 2022, \$83 million, \$100 million, \$242 million and \$75 million, respectively, were drawn on Facility II, including \$33 million, \$40 million, \$97 million and \$30 million, respectively, from Barrick’s Pueblo Viejo JV partner. During 2025, \$25 million was repaid on Facility II, including \$10 million from Barrick’s Pueblo Viejo JV partner.

During 2025 and 2024, \$nil and \$110 million, respectively, was drawn on the Second PV Shareholder Loan, including \$nil and \$44 million, respectively, from Barrick’s Pueblo Viejo JV partner.

Pascua-Lama Silver Sale Agreement

Our silver sale agreement with Wheaton requires us to deliver 25% of the life of mine silver production from the Pascua-Lama project once it is constructed and required delivery of 100% of silver production from the Lagunas Norte, Pierina and Veladero mines until March 31, 2018. In return, we were entitled to an upfront cash payment of \$625 million payable over three years from the date of the agreement, as well as ongoing payments in cash of the lesser of \$3.90 (subject to an annual inflation adjustment of 1 percent starting three years after project completion at Pascua-Lama) and the prevailing market price for each ounce of silver delivered under the agreement. An imputed interest expense was recorded on the liability at the rate implicit in the agreement. The liability plus imputed interest was amortized based on the difference between the effective contract price for silver and the amount of the ongoing cash payment per ounce of silver delivered under the agreement. The completion date guarantee under the silver sale agreement for Pascua-Lama was originally December 31, 2015 but was subsequently extended to June 30, 2020. Per the terms of the amended silver purchase agreement, if the requirements of the completion guarantee were not satisfied by June 30, 2020, then Wheaton had the right to terminate the agreement within 90 days of that date, in which case, they would have been entitled to the return of the upfront consideration paid less credit for silver delivered up to the date of that event.

Given that, as of September 28, 2020, Wheaton had not exercised its termination right, a residual liability of \$253 million remains due on September 1, 2039 (assuming no future deliveries are made). This residual cash liability was remeasured to \$148 million as at September 30, 2020, which was the present value of the liability due in 2039 discounted at a rate estimated for comparable liabilities, including Barrick’s outstanding debt. The liability had a balance of \$172 million as at December 31, 2025 and is measured at amortized cost.

Pueblo Viejo Gold and Silver Streaming Agreement

On September 29, 2015, we closed a gold and silver streaming transaction with Royal Gold, Inc. (“Royal Gold”) for production linked to Barrick’s 60% interest in the Pueblo Viejo mine. Royal Gold made an upfront cash payment of \$610 million and will continue to make cash payments for gold and silver delivered under the agreement. The \$610 million upfront payment is not repayable and Barrick is obligated to deliver gold and silver based on Pueblo Viejo’s production. We have accounted for the upfront payment as deferred revenue and will recognize it in earnings, along with the ongoing cash payments, as the gold and silver is delivered to Royal Gold. We will also be recording accretion expense on the deferred revenue balance as the time value of the upfront deposit represents a significant financing component of the transaction.

Under the terms of the agreement, Barrick will sell gold and silver to Royal Gold equivalent to:

- 7.5% of Barrick’s interest in the gold produced at Pueblo Viejo until 990,000 ounces of gold have been delivered, and 3.75% thereafter. As at December 31, 2025, approximately 397,000 ounces of gold have been delivered.
- 75% of Barrick’s interest in the silver produced at Pueblo Viejo until 50 million ounces have been delivered, and 37.5% thereafter. Silver will be delivered based on a fixed recovery rate of 70%. Silver above this recovery rate is not subject to the stream. As at December 31, 2025, approximately 14 million ounces of silver have been delivered.

Barrick will receive ongoing cash payments from Royal Gold equivalent to 30% of the prevailing spot prices for the first 550,000 ounces of gold and 23.1 million ounces of silver delivered. Thereafter payments will double to 60% of prevailing spot prices for each subsequent ounce of gold and silver delivered. Ongoing cash payments to Barrick are tied to prevailing spot prices rather than fixed in advance, maintaining exposure to higher gold and silver prices in the future.

30. DEFERRED INCOME TAXES

Recognition and Measurement

We record deferred income tax assets and liabilities where temporary differences exist between the carrying amounts of assets and liabilities in our balance sheet and their tax bases. The measurement and recognition of deferred income tax assets and liabilities takes into account: substantively enacted rates that will apply when temporary differences reverse; interpretations of relevant tax legislation; estimates of the tax bases of assets and liabilities; and the deductibility of expenditures for income tax purposes. In addition, the measurement and recognition of deferred tax assets takes into account tax planning strategies. We recognize the effect of changes in our assessment of these estimates and factors when they occur. Changes in deferred income tax assets and liabilities are allocated between net income, other comprehensive income, equity and goodwill based on the source of the change.

Current income taxes of \$6 million have been provided in the year on the undistributed earnings of certain foreign subsidiaries. Our total income tax provision for these items as at December 31, 2025 is \$6 million. Deferred income taxes have not been provided on the undistributed earnings of all other foreign subsidiaries for which we are able to control the timing of the remittance, and it is probable that there will be no remittance in the foreseeable future. These undistributed earnings amounted to \$14,362 million as at December 31, 2025.

¹ Represents the gross amount of tax loss carryforwards translated at closing exchange rates at December 31, 2025.

The non-capital tax losses include \$4,059 million of losses which are not recognized in deferred tax assets. Of these, \$4 million expire in 2026, \$122 million expire in 2027, \$29 million expire in 2028, \$3 million expire in 2029, \$1,879 million expire in 2030 or later, and \$2,022 million have no expiry date.

Recognition of Deferred Tax Assets

We recognize deferred tax assets taking into account the effects of local tax law. Deferred tax assets are fully recognized when we conclude that sufficient positive evidence exists to demonstrate that it is probable that a deferred tax asset will be realized. The main factors considered are:

- Historic and expected future levels of taxable income;
- Tax plans that affect whether tax assets can be realized; and
- The nature, amount and expected timing of reversal of taxable temporary differences.

Levels of future income are mainly affected by: market prices for gold, copper and silver; forecasted future costs and expenses to produce gold and copper; quantities of proven and probable gold and copper reserves; market interest rates; and foreign currency exchange rates. If these factors or other circumstances change, we record an adjustment to the recognition of deferred tax assets to reflect our latest assessment of the amount of deferred tax assets that is probable will be realized.

Deferred Tax Assets Not Recognized

	As at Dec. 31, 2025	As at Dec. 31, 2024
Australia	\$ 389	\$ 467

31. CAPITAL STOCK

Authorized Capital Stock

Our authorized capital stock is composed of an unlimited number of common shares (issued 1,675,360,395 common shares as at December 31, 2025). Our common shares have no par value.

Dividends

In 2025, we declared and paid dividends in US dollars totaling \$890 million (2024: \$696 million).

The Company's dividend reinvestment plan resulted in \$4 million (2024: \$4 million) reinvested into the Company.

At the February 4, 2026 meeting, the Board of Directors authorized a dividend of \$0.42 per share (approximately \$700 million dollars) to be paid on March 16, 2026 to shareholders of record at the close of business on February 27, 2026.

Share Buyback Program

At the February 11, 2025 meeting, the Board of Directors authorized a share buyback program for the repurchase of up to \$1.0 billion of the Company's outstanding common shares over the next 12 months. At the November 7, 2025 meeting, the Board of Directors authorized an increase in the share buyback program for the repurchase of up to an additional \$500 million of the Company's outstanding common shares before the program expires in February 2026. In 2025, Barrick purchased 51.9 million common shares for a total cash amount of \$1.5 billion under this program and accrued \$30 million in related taxes.

1 Tanzania mines consist of the two operating mines, North Mara and Bulyanhulu.

2 Includes partner distributions.

33. RELATED PARTY TRANSACTIONS

The Company's related parties include its subsidiaries, joint operations, joint ventures and key management personnel. During its normal course of operations, the Company enters into transactions with its related parties for goods and services. Transactions between the Company and its subsidiaries and joint operations, which are related parties of the Company, have been eliminated on consolidation and are not disclosed in this note. There were no other material related party transactions reported in the year.

Remuneration of Key Management Personnel

Key management personnel include the members of the Board of Directors and the executive leadership team. Compensation for key management personnel (including Directors) was as follows:

For the years ended December 31	2025	2024
Salaries and short-term employee benefits ¹	\$ 32	\$ 28
Post-employment benefits ²	3	4
Termination benefits	51	–
Share-based payments and other ³	70	25
	\$ 156	\$ 57

1 Includes annual salary and annual short-term incentives/other bonuses earned in the year.

2 Represents Company contributions to retirement savings plans.

3 Relates to DSU, RSU, and PGSU grants and other compensation.

34. STOCK-BASED COMPENSATION

a) Restricted Share Units (RSUs) and Deferred Share Units (DSUs)

Compensation expense for RSUs was a \$126 million charge to earnings in 2025 (2024: \$35 million) and is presented as a component of general and administrative expenses and cost of sales, consistent with the classification of other elements of compensation expense for those employees who had RSUs. Compensation expense for DSUs was a \$23 million charge to earnings in 2025 (2024: \$3 million recovery) and is presented as a component of general and administrative expenses.

Compensation expense for RSUs incorporates an expected forfeiture rate. The expected forfeiture rate is estimated based on historical forfeiture rates and expectations of future forfeiture rates. We make adjustments if the actual forfeiture rate differs from the expected rate. At December 31, 2025, the weighted average remaining contractual life of RSUs was 0.77 years (2024: 0.82 years).

DSU and RSU Activity (Number of Units in Thousands)

	DSUs	Fair value	RSUs	Fair value
At January 1, 2024	1,011	\$ 18.3	2,855	\$ 34.0
Settled for cash	(384)	(6.7)	(1,665)	(31.3)
Granted	145	2.5	2,395	37.6
Credits for dividends	–	–	101	1.7
Change in value	–	(2.1)	–	(2.7)
At December 31, 2024	772	\$ 12.0	3,686	\$ 39.3
Settled for cash	(205)	(7.1)	(2,121)	(45.6)
Granted	82	2.1	2,183	98.2
Credits for dividends	–	–	75	1.9
Change in value	–	21.4	–	25.7
At December 31, 2025	649	\$ 28.4	3,823	\$ 119.5

b) Performance Granted Share Units (PGSUs)

In 2014, Barrick launched a PGSU plan. Under this plan, selected employees are granted PGSUs, where each PGSU has a value equal to one Barrick common share. At December 31, 2025, 3,367 thousand units had been granted at a fair value of \$94 million (2024: 3,453 thousand units at a fair value of \$38 million).

35. LOULO-GOUNKOTO

Barrick owns 80% of Somilo and Goukoto with the Government of the Republic of Mali owning the other 20%. As previously disclosed, the Company and the GoM had been engaged in an ongoing dispute over the existing mining conventions of these two companies (together, the "Conventions").

On January 2, 2025, an interim attachment order was issued by the Senior Investigating Judges of the Pôle National Économique et Financier against the existing gold stock on the site of the Loulo-Goukoto mining complex, which was executed on January 11, 2025 when the gold was removed from the site to a custodial bank. This gold doré had a carrying value of \$92 million at the date of removal and was included in finished products as at December 31, 2024. On January 14, 2025, due to the restrictions imposed by the GoM on gold shipments, the Company announced that the Loulo-Goukoto complex would temporarily suspend operations.

On June 16, 2025, the Bamako Commercial Tribunal placed Loulo-Goukoto under temporary provisional administration. While Barrick retained its 80% legal ownership of the mining complex, control over operations transferred to an external administrator. Following this action by the Malian courts, we concluded that Barrick had lost control of the subsidiaries that hold our interest in Loulo-Goukoto because we could not effectively exercise power over the relevant activities related to the mine, nor could we affect the returns of the mine through managerial involvement. As a result of the loss of control event in Q2 2025, we deconsolidated the subsidiaries, and derecognized the assets, liabilities and non-controlling interest of Loulo-Goukoto at their carrying amounts at the date when control was lost.

Upon deconsolidation, IFRS Accounting Standards require the retained interest in the former subsidiaries to be recognized at fair value. Barrick accounted for the retained interest in Somilo and Goukoto in accordance with IFRS 9. Fair value is the price that would be received to sell an asset in an orderly transaction between market participants. For Q2, Barrick's estimate of the initial fair value of the retained 80% interest was \$1.7 billion. This fair value was calculated using our life of mine plan with updates to reflect the situation as at June 30, 2025. This included application of fiscal terms to be in line with the 2023 Mining Code (primarily increased royalties and duties) and certain adjustments were made to reflect a period of disruption to the steady state operations. This loss on the change of control in Q2 was partially offset by the value of the retained investment in Loulo-Goukoto, with the net recognized in Other Expense (Income).

As at September 30, 2025 and, primarily as a result of an increase in our gold price assumptions, we increased the estimated fair value of our retained 80% interest to be \$1.95 billion.

These fair value calculations included a high level of uncertainty and did not include any value for the arbitration of Barrick's subsidiaries.

On November 24, 2025, Barrick announced that an agreement had been entered into with the Government of the Republic of Mali to put an end to all disputes regarding the Loulo and Goukoto mines. The provisional administration of the Loulo-Goukoto complex was terminated on December 16, 2025, at which point operational control was handed back to Somilo and Goukoto's management. A cash settlement payment of \$253 million was made to the GoM in November 2025 as part of the overall settlement amount provided for in the agreement. In addition, Barrick agreed to pay out all historical retained earnings of Somilo and Goukoto by December 31, 2030 which led to the recognition of an other liability to Loulo-Goukoto NCI for \$240 million.

We have determined that this represents a business combination with Barrick identified as the acquirer and we recognized the assets, liabilities and non-controlling interest of Loulo-Goukoto at fair value. Refer to note 4 for further details of the purchase price allocation. We also derecognized the investment asset representing our 80% interest while we did not have control. The resulting impact on 2025 net earnings of these events is summarized in the following table:

Carrying value of net assets derecognized	\$ (3,421)
Carrying value of non-controlling interest derecognized	686
Fair value of Loulo-Goukoto investment (note 4)	2,576
Carrying value of receivables derecognized (Q4)	(186)
Settlement payment to Government of Mali (Q4)	(253)
Other	(27)
Net expense recognized in Other Expense (Income)	\$ (625)

As part of the settlement, the finished goods gold inventory that was seized on January 11, 2025 was returned to Loulo-Goukoto and was subsequently sold before December 31, 2025.

Refer to note 36 for further details of the legal matters related to this topic.

36. CONTINGENCIES

Certain conditions may exist as of the date the financial statements are issued that may result in a loss to the Company, but which will only be resolved when one or more future events occur or fail to occur. The impact of any resulting loss from such matters affecting these financial statements and noted below may be material.

Litigation and Claims

In assessing loss contingencies related to legal proceedings that are pending against us or unasserted claims that may result in such proceedings, the Company, with assistance from its legal counsel, evaluates the perceived merits of any legal proceedings or unasserted claims as well as the perceived merits of the amount of relief sought or expected to be sought.

Pascua-Lama – Proposed Canadian Securities Class Actions

In 2014, proposed secondary market liability securities class actions were initiated in Ontario and Quebec against Barrick Mining Corporation and certain former senior executives relating to public disclosures concerning the Pascua-Lama Project. The Ontario action focuses on disclosures regarding capital cost and schedule estimates for Pascua-Lama and environmental matters in Chile between February 2012 and June 2013; the Quebec action pertains only to disclosure regarding environmental matters in Chile between July 2012 and October 2013. In the Ontario proceeding, the plaintiffs seek damages exceeding \$3 billion. Alleged damages in Quebec have not been quantified.

In Quebec, the plaintiffs filed their Originating Application in February 2024 and Barrick responded formally in March 2024. Barrick filed its Statement of Defence on February 12, 2025. No trial date has been set. In the Ontario proceeding, the plaintiffs' motion for class certification was heard in January 2026. The Court has reserved judgment.

The Company intends to vigorously defend these actions. No amounts have been recorded for any potential liability arising from either of the actions, as the Company cannot reasonably predict the outcome in Ontario or Quebec.

Pascua-Lama – SMA Regulatory Sanctions

In May 2013, Compañía Minera Nevada ("CMN"), Barrick's Chilean subsidiary that holds the Chilean portion of the Pascua-Lama Project (the "Project"), received a resolution (the "Original Resolution") from Chile's environmental regulator (the Superintendencia del Medio Ambiente, or "SMA") requiring CMN to complete the water management system in accordance with the Project's environmental permit before resuming construction activities. The Original Resolution also required CMN to pay an administrative fine of approximately \$16 million, which CMN paid in May 2013.

In 2013, a group of local farmers and indigenous communities challenged the Original Resolution, claiming the fine was inadequate and requesting more severe sanctions, including the revocation of the Project's environmental permit. The SMA and CMN defended the Original Resolution.

In 2018, the SMA issued the revised resolution (the "Revised Resolution"), which reduced the original administrative fine to \$11.5 million and ordered the closure of existing surface facilities on the Chilean side of the Project. The Revised Resolution did not revoke the Project's environmental permit. CMN filed an appeal of the Revised Resolution in 2018 with the First Environmental Court of Antofagasta (the "Antofagasta Environmental Court").

In 2020, the Antofagasta Environmental Court upheld the closure order and sanctions in the Revised Resolution. It also ordered the SMA to reevaluate certain environmental infringements. The Company did not appeal this ruling, and the Chilean side of the Pascua-Lama project is being transitioned to closure accordingly.

On November 13, 2024, the SMA determined no further fine was applicable to the environmental infringements. On November 21, 2024, CMN paid the outstanding balance of fines previously imposed by the SMA. On December 9, 2024, the same group of local farmers and indigenous communities filed an appeal of the SMA's November 13, 2024 decision. This appeal remains pending.

Veladero – Operational Incidents and Associated Proceedings

Minera Andina del Sol SRL (formerly, Minera Argentina Gold SRL) ("MAS"), the joint venture company that operates the Veladero mine, is the subject of regulatory proceedings related to operational incidents at the Veladero Valley Leach Facility ("VLF") occurring in March 2017 (the "March 2017 incident"), September 2016 and September 2015.

Following the March 2017 incident, an "amparo" protection action (the "Provincial Amparo Action") was filed against MAS in the Jachal First Instance Court, San Juan Province, Argentina (the "Jachal Court") by individuals who claimed to be living in Jachal, seeking the cessation of all activities at the Veladero mine or a suspension of the mine's leaching process. The matter before the Jachal Court remains pending.

In 2017, the National Minister of Environment of Argentina filed an amparo action in the Federal Court in connection with the same March 2017 incident (the "Federal Amparo Action") seeking an order requiring the cessation and/or suspension of activities at the Veladero mine.

On June 28, 2024, the Federal Court rejected the National Minister's request for, among other things, an interim injunction requiring the cessation and/or suspension of activities at the Veladero mine. The National Minister sought to appeal this decision twice in 2024, most recently seeking leave to the Federal Supreme Court on October 16, 2024. The Federal Amparo Action will continue before the Federal Court while the Federal Supreme Court considers whether to hear the appeal for an interim injunction.

The Company continues to believe the Provincial and Federal Amparo Actions are without merit and intends to continue to vigorously defend its position.

Civil Action

In 2016, MAS was served notice of a civil action filed before the San Juan Provincial Court by certain persons allegedly living in Jachal, San Juan Province, claiming to be affected by the Veladero mine and, in particular, the VLF. The plaintiffs requested a court order that MAS cease leaching metals with cyanide solutions, mercury and other similar substances at the mine and replace that process with one that is free of hazardous substances, implement a closure and remediation plan for the VLF and surrounding areas, and create a committee to monitor this process. These claims were supplemented by new allegations that the risk of environmental damage had increased as a result of the March 2017 incident.

MAS replied to the lawsuit in February 2017, responded to the supplemental claim and intends to continue defending this matter vigorously.

Perilla Complaint

In 2009, Barrick Gold Inc. and Placer Dome Inc. (“Placer Dome”), which was acquired by the Company in 2006, were purportedly served in Ontario with a complaint filed in November 2008 in the Regional Trial Court of Boac on the Philippine island of Marinduque. The complaint alleged injury to the economy and the ecology of Marinduque as a result of the discharge of mine tailings from the Marcopper mine into Calancan Bay, the Boac River, and the Mogpog River. Placer Dome was previously a minority indirect shareholder of Marcopper Mining Corporation (“Marcopper”). The plaintiffs claimed for abatement of a public nuisance and nominal damages for an alleged violation of their constitutional right to a balanced and healthful ecology. By Order dated November 9, 2011, the Court granted the plaintiffs’ motion to suspend the proceedings. On April 28, 2025, the Regional Trial Court of Boac dismissed the proceeding with prejudice.

Writ of Kalikasan

On February 25, 2011, a Petition for the Issuance of a Writ of Kalikasan with Prayer for Temporary Environmental Protection Order was filed in the Supreme Court of the Republic of the Philippines by three named Petitioners against Placer Dome and the Company (the “Petition”). The Petition alleged Placer Dome violated the Petitioners’ constitutional right to a balanced and healthful ecology as a result of, among other things, the discharge of tailings into Calancan Bay, a dam breach in 1993, and a tailings spill in 1996. The Petitioners sought orders requiring Barrick to environmentally remediate the areas in and around the mine site that were alleged to have sustained environmental impacts.

On January 21, 2021, the Court of Appeals granted an Intervention Motion introduced by the Province of Marinduque (the “Province”) and admitted the Province’s Petition-in-Intervention. In the Petition-in-Intervention, the Province sought to expand the scope of relief sought within the Writ of Kalikasan to include claims seeking rehabilitation and remediation of alleged maintenance and structural integrity issues supposedly associated with Marcopper mine infrastructure.

On April 4, 2025, Barrick and the Provincial Government of Marinduque signed agreements to settle, without admission of liability, all proceedings and claims related to alleged environmental issues associated with the Marcopper mine, subject to various conditions precedent, including approval of the settlement by the Court of Appeals and certain confirmations by the Department of Environment and Natural Resources. Once all conditions are satisfied, Barrick will pay a settlement amount of \$100 million to the Province over three years. This amount was recorded in Q1 2025. On October 3, 2025, the Court of Appeals in the Philippines approved the settlement agreement and dismissed the Writ of Kalikasan proceedings against Barrick and Placer Dome with prejudice. Certain additional conditions precedent remain outstanding, including the issuance of confirmations by the Department of Environment and Natural Resources.

North Mara – Ontario Litigation

On November 23, 2022, an action was commenced against the Company in the Ontario Superior Court of Justice in respect of alleged security-related incidents in the vicinity of the North Mara Gold Mine in Tanzania. The named plaintiffs purport to have been injured, or to be the dependents of individuals who were allegedly killed, by members of the Tanzanian Police Force. The Statement of Claim asserts Barrick Mining Corporation is legally responsible for the actions of the Tanzanian Police Force, and that the Company is liable for an unspecified amount of damages.

In February 2024, an additional action was commenced against the Company in the Ontario Superior Court of Justice on behalf of different named plaintiffs in respect of alleged security-related incidents said to have occurred in the vicinity of the North Mara Gold Mine. The Statement of Claim in the second action is substantially similar to the Statement of Claim issued in November 2022. The Company believes the allegations in both claims are without merit, including because the Tanzanian Police Force is a sovereign police force that operates under its own chain of command.

On November 26, 2024, the court granted Barrick’s motion to dismiss both actions on the grounds that the Ontario Superior Court of Justice lacks jurisdiction and that Tanzania is a more appropriate forum in which to litigate this matter. On December 27, 2024, the plaintiffs appealed to the Court of Appeal for Ontario. The appeal was heard on November 27, 2025. The Court of Appeal reserved judgment and a decision remains pending.

Loulo-Gounkoto Mining Conventions Dispute

In 2023, the Government of the Republic of Mali initiated a review of existing Conventions. As part of this process, the Government of Mali demanded the mines become subject to the Malian 2023 Mining Code, in direct violation of the stability rights contained in the Conventions.

Beginning in 2023, the Government of Mali initiated several fiscal and customs proceedings against Somilo and Gounkoto, demanding payment of various charges, taxes, duties, and other amounts from which they were exempt. Barrick regularly engaged with the Government of Mali to find a global settlement and in October 2024, Barrick made a payment of FCFA 50 billion (\$84 million) to advance those negotiations. Despite the Company’s efforts, in November 2024, Somilo and Gounkoto were restricted from exporting gold from Mali, also in violation of the Conventions. At the same time, the Government of Mali initiated meritless criminal proceedings against the Company, its Malian subsidiaries, their offices and directors and several employees, alleging violations of exchange control regulations and threatening substantial fines and imprisonment. These proceedings resulted in the incarceration of four employees on November 25, 2024.

On December 18, 2024, after multiple good faith attempts to resolve the dispute, Somilo and Gounkoto submitted a request for arbitration to the International Centre for the Settlement of Investment Disputes (ICSID) in accordance with the provisions of their respective Convention.

On January 2, 2025, an interim attachment order was issued by the Senior Investigating Judges of the Pôle National Économique et Financier (“Pôle Économique”) against the existing gold stock on the site of the Loulo-Gounkoto mining complex. On January 11, 2025, the gold was removed from the site to a custodial bank. On January 14, 2025, due to the restrictions imposed by the Government of Mali on gold shipments, the Company announced that the Loulo-Gounkoto mining complex would temporarily suspend operations. On June 16, 2025, the Bamako Commercial Tribunal placed the Loulo-Gounkoto complex under six months of provisional administration and the Provisional Administrator assumed day to day management of operations at the complex on June 23, 2025.

On November 24, 2025, Barrick announced that an agreement with the Government of Mali had been entered into to put an end to all disputes regarding Somilo and Gounkoto, including the termination of the provisional administration, the dropping of all charges against Barrick, its affiliates and employees and the release of the four detained employees, the renewal of the Somilo Exploitation Permit for a 10 year period, and the withdrawal of the ICSID claims. A settlement payment of approximately FCFA 143 billion (\$253 million) was made to the Government of Mali on November 28, 2025, which was part of the global settlement amount. Operational control was handed back to Somilo and Gounkoto’s management on December 16, 2025, and the Loulo-Gounkoto complex is now producing gold. The parties sought withdrawal of the ICSID arbitration on December 15, 2025 and the gold stock attached in January 2025 was returned to Somilo and Gounkoto on December 18, 2025. Other steps contemplated by the November 24, 2025 agreement, including the 10-year renewal of the Somilo Exploitation Permit, remain to be completed. The Gounkoto Exploitation Permit is valid until 2042.

Pueblo Viejo – Amparo Actions

In May 2025, two constitutional actions were filed in an administrative court in the Dominican Republic against Pueblo Viejo Dominicana Jersey 2 Limited (PV), the joint venture company that operates the Pueblo Viejo mine, and the Dominican Ministry of Environment and Natural Resources. The actions, styled as “amparo” remedies, were brought by local individuals and environmental non-governmental organizations seeking to suspend construction of the mine’s new Naranjo tailings storage facility and to revoke the underlying environmental license for that facility on the basis of alleged environmental and human rights concerns.

A hearing for the first amparo action was held on September 2, 2025. The administrative court dismissed that action on procedural grounds. The plaintiffs appealed the dismissal to the constitutional court on October 6, 2025. The appeal remains pending. On December 16, 2025, a hearing was held for the second amparo action and the plaintiffs voluntarily withdrew their claim. That matter is now closed. The Company believes there is no merit to the remaining amparo action and intends to defend its position vigorously.

DIVIDEND POLICY

On February 4, 2026, the Board of Directors announced a new dividend policy. In Q4 2025 and going forward, the Company's dividend policy targets a total payout of 50% of attributable free cash flow on an annualized basis, comprised of a fixed base quarterly dividend of \$0.175 per share and a performance top-up component at each year end based on the attributable free cash flow during the year. The dividend paid in any given year may be higher or lower than the 50% target based on the strength of cash flow, capital needs, balance sheet considerations and other factors.

DIVIDEND PAYMENTS

In 2025, Barrick paid an aggregate cash dividend of \$0.525 per common share – \$0.10 on March 17; \$0.10 on June 16; \$0.15 on September 15; and \$0.175 on December 15.

An aggregate cash dividend of \$0.40 per common share was paid in 2024 – \$0.10 on March 15; \$0.10 on June 17; \$0.10 on September 16; and \$0.10 on December 16.

SHARE BUYBACK PROGRAM

At the February 11, 2025 meeting, the Board of Directors authorized a share buyback program for the repurchase of up to \$1.0 billion of the Company's outstanding common shares over the next 12 months. At the November 7, 2025 meeting, on the back of the strong financial performance of the Company, the Board of Directors authorized an increase in the share buyback program for the repurchase of up to an additional \$500 million, raising the total to \$1.5 billion. Barrick repurchased \$1.5 billion of shares in 2025 under this share buyback program.

FORM 40-F

CAUTIONARY STATEMENT ON FORWARD-LOOKING INFORMATION

Certain information contained or incorporated by reference in this Annual Report, including any information as to our strategy, projects, plans or future financial or operating performance, constitutes “forward-looking statements”. All statements, other than statements of historical fact, are forward-looking statements. The words “believe”, “expect”, “anticipated”, “aim”, “strategy”, “ramp up”, “target”, “plan”, “opportunities”, “guidance”, “forecast”, “outlook”, “project”, “develop”, “progress”, “continue”, “temporary”, “committed”, “estimate”, “potential”, “prospective”, “future”, “focus”, “ongoing”, “following”, “subject to”, “scheduled”, “may”, “will”, “can”, “could”, “would”, “should” and similar expressions identify forward-looking statements. In particular, this Annual Report contains forward-looking statements including, without limitation, with respect to: Barrick’s forward-looking production and cost guidance, including our three-year gold and copper production outlook; anticipated production growth from Barrick’s organic project pipeline and reserve replacement; estimates of future cost of sales per ounce for gold and per pound for copper, total cash costs per ounce and C1 cash costs per pound, and all-in sustaining costs per ounce/pound; cash flow forecasts; projected capital, operating and exploration expenditures; the share buyback program and performance dividend policy; mine life and production rates; contingent consideration from the sale of the Hemlo gold mine and the Tongon gold mine; anticipated timing for development of the Goldrush Project; our plans, timelines, and expected completion and benefits of our growth projects, including the Goldrush Project, Fourmile, Ren, Pueblo Viejo plant expansion and mine life extension project, Veladero Phase 8 Leach Pad, Reko Diq, solar power project at Kibali, and the Lumwana Super Pit Expansion; anticipated production at Goldrush, Ren, Reko Diq and Lumwana; the doubling of mineral resources at Fourmile; capital expenditures related to upgrades and ongoing management initiatives; Barrick’s global exploration strategy and planned exploration activities; Barrick’s strategic copper business; our pipeline of high confidence projects at or near existing operations; the resumption of operations at Loulo-Gounkoto following the resolution of disputes with the Government of Mali, including adoption of the 2023 Mining Code; the incorporation of Fourmile into the NGM joint venture at fair market value; potential mineralization and metal or mineral recoveries; Barrick’s intention to explore and potential benefits and expected timing of an initial public offering of its North American gold assets; our ability to convert resources into reserves and future reserve replacement; asset sales, joint ventures and partnerships; Barrick’s strategy, plans, targets and goals in respect of sustainability issues, including climate change, greenhouse gas (“GHG”) emissions reduction targets, human rights, safety performance, community development and resettlement, and responsible water use; and expectations regarding future price assumptions, financial performance and other outlook or guidance.

Forward-looking statements are necessarily based upon a number of estimates and assumptions including material estimates and assumptions related to the factors set forth below that, while considered reasonable by the Company as at the date of this Annual Report in light of management’s experience and perception of current conditions and expected developments, are inherently subject to significant business, economic and competitive uncertainties and contingencies. Known and unknown factors could cause actual results to differ materially from those projected in the forward-looking statements and undue reliance should not be placed on such statements and information. Such factors include, but are not limited to: fluctuations in the spot and forward price of gold, copper or certain other commodities (such as silver, diesel fuel, natural gas and electricity); risks associated with projects in the early stages of evaluation and for which additional engineering and other analysis is required; risks related to the possibility that future exploration results will not be consistent with the Company’s expectations, that quantities or grades of reserves will be diminished, and that resources may not be converted to reserves; risks associated with the fact that certain of the initiatives described in this Annual Report are still in the early stages and may not materialize; changes in mineral production performance, exploitation and exploration successes; risks that exploration data may be incomplete and considerable additional work may be required to complete further evaluation, including but not limited to drilling, engineering and socioeconomic studies and investment; the speculative nature of mineral exploration and development; lack of certainty with respect to foreign legal systems, corruption and other factors that are inconsistent with the rule of law; changes in national and local government legislation, taxation, controls or regulations and/or changes in the administration of laws, policies and practices, including the expropriation or nationalization of property and political or economic developments in Canada, the United States or other countries in which Barrick does or may carry on business in the future; risks relating to political instability in certain of the jurisdictions in which Barrick operates; timing of receipt of, or failure to comply with, necessary permits and approvals; non-renewal of key licenses by governmental authorities; failure to comply with environmental and health and safety laws and regulations; increased costs and physical and transition risks related to climate change, including extreme weather events, resource shortages, emerging policies and increased regulations related to GHG emission levels, energy efficiency and reporting of risks; the Company’s ability to achieve its sustainability goals, including its climate-related goals and GHG emissions reduction targets, in particular its ability to achieve its Scope 3 emissions targets which require reliance on entities within Barrick’s value chain, but outside of the Company’s direct control, to achieve such targets within the specified time frames; contests over title to properties, particularly title to undeveloped properties,

or over access to water, power and other required infrastructure; the liability associated with risks and hazards in the mining industry, and the ability to maintain insurance to cover such losses; damage to the Company's reputation due to the actual or perceived occurrence of any number of events, including negative publicity with respect to the Company's handling of environmental matters or dealings with community groups, whether true or not; risks related to operations near communities that may regard Barrick's operations as being detrimental to them; litigation and legal and administrative proceedings; operating or technical difficulties in connection with mining or development activities, including geotechnical challenges, tailings dam and storage facilities failures, and disruptions in the maintenance or provision of required infrastructure and information technology systems; increased costs, delays, suspensions and technical challenges associated with the construction of capital projects; risks associated with working with partners in jointly controlled assets; risks related to disruption of supply routes which may cause delays in construction and mining activities, including disruptions in the supply of key mining inputs due to the invasion of Ukraine by Russia and conflicts in the Middle East; risk of loss due to acts of war, terrorism, sabotage and civil disturbances; risks associated with artisanal and illegal mining; risks associated with Barrick's infrastructure, information technology systems and the implementation of Barrick's technological initiatives, including risks related to cybersecurity incidents, including those caused by computer viruses, malware, ransomware and other cyberattacks, or similar information technology system failures, delays and/or disruptions; the impact of global liquidity and credit availability on the timing of cash flows and the values of assets and liabilities based on projected future cash flows; the impact of inflation, including global inflationary pressures driven by ongoing global supply chain disruptions, global energy cost increases following the invasion of Ukraine by Russia and country-specific political, economic factors in Argentina and uncertainty related to Venezuela; adverse changes in our credit ratings; fluctuations in the currency markets; changes in U.S. dollar interest rates; changes in U.S. trade, tariff and other controls on imports and exports, tax, immigration or other policies that may impact relations with foreign countries, result in retaliatory policies, lead to increased costs for raw materials

and components, or impact Barrick's existing operations and material growth projects; risks arising from holding derivative instruments (such as credit risk, market liquidity risk and mark-to-market risk); risks related to the demands placed on the Company's management, the ability of management to implement its business strategy and enhanced political risk in certain jurisdictions; uncertainty whether some or all of Barrick's targeted investments and projects will meet the Company's capital allocation objectives and internal hurdle rate; whether benefits expected from recent transactions are realized; business opportunities that may be presented to, or pursued by, the Company; our ability to successfully integrate acquisitions or complete divestitures; risks related to competition in the mining industry; employee relations including loss of key employees; availability and increased costs associated with mining inputs and labor; risks associated with diseases, epidemics and pandemics; risks related to the failure of internal controls; and risks related to the impairment of the Company's goodwill and assets. In addition, there are risks and hazards associated with the business of mineral exploration, development and mining, including environmental hazards, industrial accidents, unusual or unexpected formations, pressures, cave-ins, flooding and gold bullion, copper cathode or gold or copper concentrate losses (and the risk of inadequate insurance, or inability to obtain insurance, to cover these risks).

Many of these uncertainties and contingencies can affect our actual results and could cause actual results to differ materially from those expressed or implied in any forward-looking statements made by, or on behalf of, us. Readers are cautioned that forward-looking statements are not guarantees of future performance. All of the forward-looking statements made in this Annual Report are qualified by these cautionary statements. Specific reference is made to the most recent Form 40-F/ Annual Information Form on file with the SEC and Canadian provincial securities regulatory authorities for a more detailed discussion of some of the factors underlying forward-looking statements and the risks that may affect Barrick's ability to achieve the expectations set forth in the forward-looking statements contained in this Annual Report. We disclaim any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except as required by applicable law.
