Toronto, October 19, 2000 . . . Barrick Gold Corporation today reported earnings of US$86 million for the third quarter making it the second best quarter in Company history. These strong results reflect excellent performances by all operations, lower income taxes and the premium earned on gold sales. With the fourth quarter expected to be its best ever, the Company is on track for another record year.

Net income for the third quarter was US$86 million, or US22 cents a share, on revenues of US$321 million, compared to net income of US$79 million, or US20 cents a share, on revenues of US$331 million in the year-before period. Operating cash flow was US$173 million, or US44 cents per share, compared to US$200 million, or US50 cents a share.

"These outstanding quarterly results demonstrate the economic value we are creating for our shareholders," said Randall Oliphant, President and Chief Executive Officer. "For us, this is an excellent business to be in. We have high margins, growing production and rising earnings and cash flows."

This was the 51st consecutive quarter in which the Company has recorded a premium to the spot price. In the first nine months, Barrick's Premium Gold Sales Program realized an average price of US$360 an ounce on its gold sales, a premium of US$78 per ounce over the average spot price of US$282 in the period.

Gold production rose 6% to 897,767 ounces for the third quarter, compared to 845,758 ounces in the same period last year. Barrick's costs remained the lowest in the industry. For the quarter, total cash costs, including royalties, were US$151 an ounce, compared to US$137 an ounce in the year-earlier period.

Barrick Gold Corporation

Toronto, Canada
M5J 2J3

For the year, the Company is on track to produce 3.7 million ounces at cash costs of US$145 per ounce, with continued strong performances from the Goldstrike Property in Nevada and the Pierina Mine in Peru. Goldstrike production is

benefiting from the additional processing capacity provided by the new roaster facility completed earlier this year and higher grades at the Betze-Post Mine.

"The new roaster at the Goldstrike Property operated above design capacity during the third quarter at lower costs than expected, which is a credit to our development and operating teams," said John Carrington, Vice Chairman and Chief Operating Officer.

While this year's performance is strengthening as the year progresses, as expected, last year saw a stronger first half as a result of mine plan sequencing. Gold production for the nine months ended September 30, 2000 was 2.7 million ounces, compared to 2.8 million ounces in the year-before period. Net income was US$230 million, or US58 cents a share, compared to US$250 million, or US63 cents a share in the year-before period. Operating cash flow for the first nine months totaled US$518 million, or US$1.31 a share, compared to US$584 million, or US$1.50 a share in the same period last year.

Barrick's future growth is being driven by three new projects under development that should increase production by 35% to 5 million ounces in 2003 at similar low costs; maintaining Barrick's position as the lowest cost producer. They are the Bulyanhulu project in Tanzania; the Rodeo project at the Goldstrike Property – both of which are on schedule for startup next year - and the Pascua-Lama project on the border of Chile and Argentina, where construction is now expected to begin in 2001.

The Company recently announced a 40% increase in reserves at Bulyanhulu to 10.5 million ounces, bringing them to three times the level they were when Barrick acquired the property in March 1999. Further increases in reserves are expected at the end of this year at all three of Barrick's development projects.

Barrick has the strongest balance sheet in the industry with the only "A" rating, cash of US$562 million, virtually no net debt and shareholders' equity of US$4.1 billion at September 30. The Company's financial strength gives it a distinct competitive advantage when it comes to assessing growth opportunities that add economic value. This financial strength also gives the Company complete flexibility in its Premium Gold Sales Program, which highly differentiates Barrick from other gold companies.

At the end of the third quarter, Barrick had 13.8 million ounces of gold sold in advance through its spot deferred program, while, overall, Barrick's committed position stands at 12.7 million ounces. (See details of the Premium Gold Sales Program, page 7). The Company will receive a minimum price of US$360 an ounce for its production through 2001, and a minimum price of approximately US$350 an ounce for a portion thereafter. In addition, the Company has 50 million ounces of reserves unhedged.

Barrick has the largest market capitalization in the industry and a proven record of consistent profitability. Its shares are traded under the ticker symbol ABX on the Toronto, New York, London and Swiss Stock Exchanges and the Paris Bourse.

BARRICK GOLD CORPORATION
HEDGING PROGRAM
As at September 30, 2000

Premium Gold Sales Program

During the third quarter of 2000, Barrick's Premium Gold Sales Program generated $73 million of additional revenue, realizing $360 per ounce versus the average spot price of $276 per ounce, a premium of $84 per ounce. Year to date, this program has generated $207 million of additional revenue, or $78 per ounce over the average spot price.

As at September 30, 2000, Barrick's spot deferred position stands at 13.8 million ounces. The purchased call option position declined from 5.6 to 4.7 million ounces with the expiry of 900,000 ounces during the quarter.

Barrick's Premium Gold Sales Program as at September 30, 2000 is made up as follows:

	2000	2001	2002	2003	2004	2005	2006+	Totals
Spot Deferred Contracts								
Ounces (000)	1,050	3,700	3,100	1,500	1,000	900	2,550	13,800

Ounces (000)	400							400
Average Strike ($/oz.)	301							301
Total Net Committed Ounces (000)								12,700

[1] The min-max contracts provide a minimum starting floor price for spot deferred contracts while allowing for additional upside gold price participation. These contracts, if exercised, will be converted into spot deferred contracts for years beyond 2001.

[2] The call options purchased allow Barrick to realize complete upside on 100% of forecast production from October 2000 to December 2001 inclusive, at a weighted average strike price of $319/oz. for 2000 and $335/oz. for 2001. Barrick has a floor price of $360 but can also capture the upside above these strike price levels in 2000 and 2001 in a rising gold price environment. During the first nine months, 2.1 million calls expired.

All dollar amounts are in United States dollars, unless otherwise indicated.

The average price of the spot deferred contracts reflects the expected future value incorporating an average lease rate assumption of 2%. Lease rates are fixed on all production through 2001, and the company has continued to lock in lease rates further for contracts designated beyond 2001. The weighted average lease rate on the total spot deferred position is 1.72%.

At September 30, 2000, the mark-to-market gain on Barrick's Premium Gold Sales Program was $278 million calculated at a spot price of $274 per ounce, prevailing market interest rates and volatilities.

Spot Deferred Investments

Barrick's total spot deferred position has a nominal value of approximately $4.2 billion on which it earns an interest return. The Company achieves a return on this asset based on LIBOR and the credit rating associated with this return is that of its hedging counterparties (average "AA"). The Company has conservatively diversified this investment by exchanging a portion of its LIBOR return for a return based on a professionally managed diversified basket of bond funds/indices. At the end of the third quarter 2000, 76% of the position was invested with "AA" hedging counterparties and the balance of 24% was invested in a basket of bond funds/indices with an average credit rating of "A-". This basket is managed to ensure that there is minimal interest rate exposure. The credit quality on the entire hedge position asset of $4.2 billion is "AA-".

Call Options Purchased

At September 30, 2000 Barrick's purchased call option position was 4.7 million ounces. These calls provide Barrick with the right but not the obligation to purchase gold, resulting in the increased leverage to higher gold prices, while still enabling the Company to maintain the security of a floor price in a low gold price environment. Barrick can therefore sell its production at a minimum floor price of $360 per ounce through its spot deferred program, but can now also realize further gains on any rise in the spot price above $319 per ounce in 2000 and $335 per ounce in 2001. In addition, these call options also mitigate the impact of higher gold prices on Barrick's mark-to-market position.

Call Options Sold

The sold options can only be exercised by the counterparties on the expiry date and can be converted, at Barrick's option, into spot deferred contracts and rolled forward for up to 15 years. There is no requirement for Barrick to cash settle these transactions. The premiums generated from the sales of the contracts that expire unexercised are recognized at the expiry date.

Trading Credit Lines

Barrick's Premium Gold Sales Program is not subject to margin requirements at any gold price.

Other Hedged Items

The Company hedges silver, copper, and Canadian dollars to cover operating and development expenditures.
