PITTSBURGH & GUENZBURG, Germany

Latest Depolox® analyzer ensures greater measurement confidence with intuitive interface

PITTSBURGH & GUENZBURG, Germany--([BUSINESS WIRE](#) [1])--Evoqua Water Technologies (NYSE:AQUA), an industry leader in mission critical water treatment solutions, today announced the launch of the Depolox® 400 M analyzer designed to provide reliable measurements of disinfectant parameters in drinking water and industrial water applications.

Drinking water utilities around the globe are faced with more stringent regulations requiring chlorine residual to provide disinfection throughout the distribution network. Excess levels of chlorine can result in elevated levels of disinfection by-product formation, while having too little disinfectant puts public health at risk. Optimized control of the disinfectant residual begins with accurate on-line residual monitoring, which has been synonymous with Depolox analyzers for over 60 years.

The new state-of-the-art Depolox 400 M analyzer ensures greater confidence in measurement while providing operators with a simple, intuitive touch screen interface and an easy to use visual dashboard, allowing operators to access all pertinent information. Data can be easily transferred to mobile devices or incorporated into plant-wide measurement dashboards.

Visit [our website](#) [2] for more information on Depolox 400 M analyzers and other water measurement solutions from Evoqua.
